Just got the Mjuzzak 16-bit tracker for the Falcon030 ....

First reaction:

SOMEBODY TRANSLATE THOSE F*CKING GERMAN TEXTFILES TO ENGLISH!

(And PLEASE include a DECENT song which DOESN'T have "rapping germans" and
corrupted (?) sounds!!!)

Other than that it seems good (for a v0.01 ... oops v1.0 ...)

>What if I already have an ATI Ultro Pro or lesser ATI card? can I just
>buy the interface kit?

No....th NOVA itself is not an ATI Card...I thnik there is a little
confusion.it is the SuperNOVA itself and only th SuperNOVA which is an
ATI Graphics Ultra Pro which is indeed a fine 32bit Gfx Card with 2Meg VRAM
and etc. etc. I guess you know all of that :)

>
>One other thing, I use an ATI Ultra Pro at work with windows, and it
>is simply fantastic compared to any other video card I've used under
>windows.

It is too on a TT :)

>
>These Nova prices seem a little steep, if they're just the ATI cards
>with an interface? What's in the interface, anyway?

NOVA is in itself very adaptable and it essentially an ET-4000 the same
you will find in a CRDOT's .. the SuperNOVA is the one you are referring
too. The Interface...hmmm it's basically an Interface for VME or Megabus..
what's in it I couldn't tell you...want me to ask the developers of the
board?

Around the ATI Graphics Ultra Pro + Interface + Supporting Software is
also a cute little fan ;) >grin< but yes..it is possible just to buy
the Interface if you have an ATI Graphics Ultra Pro...but no guarantee
that it'll work..so I was told, it is recommended to buy the whole box
and interface.

> Harald.Schoenfeld@rzmail.uni-erlangen.de | just ask Scotty

Note: Calamus 1.09N is the latest mono version. I would highly recommend it.
But if your printer has to be a SLMxxx (DMA), you will need more memory.

ST-Keep is a Citadel-type BBS package written by fellow BBS developer
Andrew Studer, here in Sacramento.

You can E-mail me back, and write exactly what you would like to tell
Andrew, and I'll forward your mail message to him.

It's a nice package, written in GFA Basic. It has Fido door support, full
file support, and a few other things like ARC-viewer, file searcher, and
others.

I don't personally run it, but it would be my second choice. :)

7. FONT SALE, MS DESIGNS

Newsgroup: comp.sys.atari.st
Date: 1993-10-01 01:04:04 UTC
From: dlk0ms9s@umiami.ir.miami.edu
Message-ID: <1993Sep30.210404.15905@umiami.ir.miami.edu>
Source record: 200167

Sale Continues! Since we first made this offer, summer has turned
to fall. We have been pleased with the response to this sale, so
we have decided to continue it for awhile longer. We hope to hear
from you!
Following is the text of the previous upload of this offer:
Summer Doldrums Sale!!
Price Reduction on CD ROMs!
Since our last upload of this, we have decided to drop the CD
ROM price another $50. This CD ROM contains all original hand
drawn art work prepared by Wheeler Arts' staff artists. Contents
are copyrighted and may be used in all your art work under the
license agreement.

==========
MS Designs offers Special Pricing, for a limited time, on
fonts for Pagestream or Calamus. Our fonts were originally sold
as Font Pack One and Font Pack Two. Each pack contains nearly 50
fonts and normally sells for $149. We are also including the
unreleased beginnings of Font Pack Three with these orders. We
wanted to have 35 more new fonts for Font Pack Three, but we did
not complete work on all of these fonts. But the fonts that were
completed are included with this offer. Business is slow this
summer so we have decided to offer Atarians an incredible deal:
we'll send you both Font Pack One and Font Pack Two--NEARLY 100
FONTS!--for the ridiculously low price of $29.95--save over
$268!
My God, I can't believe it myself!! Such a Deal!
To order, send your check or money order to:
MS Design
611 W. Illinois
Urbana, Illinois 61801-3929
Enclose $5 to cover shipping and handling in the USA. Offer
not valid outside the US. Illinois residents add 7.25% sales tax.
We cannot accept credit cards at these prices.
One last thing: we are providing only the most minimal
packaging with this offer; why pay for a package you won't use
anyway??
One more last thing: we have five only of our CD-ROM for the
Atari, Mac, Amiga, MS-DOS and UNIX platforms. This disc has 9000+
original clip art images. This is clip art at less than 3 cents
per image! Retail price: $399, these five only: $250. (Note that
this a further reduction--on last upload of this notice these
were $300) Why, you ask? Well, these are the last ones in the
old packaging. The disc is identical in either case, and it is in

a jewel box in either case. The new one is in a cardboard multicolor box--the old one is in a plastic bag? Want the box for $149 more?

8. Aggressive Party - one week left

Newsgroup: comp.sys.atari.st

```
Aggressive Party at Planet FunFun
---------------------------------

INVITATION VERSION 1.1.3 27/09/1993

Aggressive Party is a party for all computers, but there are competitions
mainly for Atari, and also for Amiga and PC.
The party is organized by AGGRESSION and Gore of FUTURE CREW.
Falcon030 will be strongly visible at the party - Thanks to ION Finland.
They will also have some new exciting Atari hardware to demonstrate.

Note for Finns only: Suomalaisille on Falkkonista oma partytarjous.
Tarjous on hyvin edullinen, ja maksu voidaan hoitaa vaikkapa osamak-
sulla. Alle 18-vuotiaille tarvitaan vanhempien takaus. Tarjous on
voimassa vain ja ainoastaan partyilla. Soitelkaa meille juuri ennen
partyja ja kysykaa lisaa.

Where and When?
---------------

The Party will be held in Europes biggest indoor amusement park called
Planet FunFun. It is located in Kerava, Finland, approximately 30 km
north of Helsinki. It starts on Friday, 8th of October at 16:00 and ends
on Sunday, 10th of October at 18:00. We can let foreign visitors to enter
as early as 12:00 on Friday, because ships from Sweden and Germany arrive
to Helsinki in the morning.

Planet FunFun is an excellent place for demo-parties. We have rented a
big hall for you and your computers and a smaller separate hall for
sleeping. There are also showers next to the smaller hall. And lots of
free parking space. For 1700 cars to be exact.

We have also a huge main hall with "amphitheather", in which we can show
competitions and movies on big screen. There are hundreds of seats, so
this time you don't have to stand to see anything.

The best thing though is: The whole amusement park is at your use. The
gadgets in it are in use only 10:00-18:00 Saturdays and Sundays, when it
is open for normal audience also, but we have some special arrangements
with it's restaurants. (Which serve also alcohol...) There will be food
and soft drinks available 24h, and you can also buy proper meals at
19:00-21:00 from a restaurant called Harlin's Diner. Alcohol will also
be served at Harlin's diner at 21:00-01:00, but only for those who have
had their 18th birthday...

Also the arcade-games in it are at use 24h, as well as "Nintendo Land".
```

Restaurants are of course open also when the amusement park is open for normal audience.

How to get there

It is very easy to get to Kerava. If you come by ferry to Helsinki and have a car with you, just follow the signs "Lahti" which leads you to the Lahti-highway (E75 or 4). Then turn off the highway at Kerava, and follow the signs "Planet FunFun". We will also put some Aggressive Party signs there.

If you come by ferry without car, take a train with label K,N or T and get off at the station of Savio (the one before Kerava). You will stand right in front of Planet FunFun. We will arrange a free transport service from Helsinki to Kerava for computers, so you don't have to carry your monitor with teeth when you walk to the station. Call our info-phone from the ship and ask when the next car will arrive.

For those who come by plane it is also easy to get to the Kerava, since there is bus from airport to Kerava. To make your travelling even more easier we can come and fetch you from the airport if you just inform us beforehand. It will cost you only 10 FIM.

Entrance fee

Entrance fee is 100 FIM.
Lockers are available for 5 FIM each.

Info-line

We will have a 24-h info line during the party. Its number is

+358-(9)0-294 4023

As you can see, it is Xenits home number. We will just transfer the calls coming to it to Planet FunFun. If you call it from Finland drop 358 and if from Finland near Helsinki drop 90.

Competitions

Computer specific compos: STe DEMO (NO SIZE LIMIT)
STe INTRO (MAX SIZE 40960 BYTES)
A500 DEMO/INTRO (NO SIZE LIMIT)
PC DEMO/INTRO (NO SIZE LIMIT)

All computers: GFX 16/4096 320*200
MUSIC 4-CHANNEL PROTRACKER MODULE

In all competitions we will have an initial jury consisting of us and our sponsors, which selects the best 20 productions in every competition. Then THE FINAL JURY CONSISTS OF THE AUTHORS OF THESE PRODUCTIONS.

DEADLINE for all competitions is at 14:00 on Saturday, 9th October, 1993.

There may be some minor changes in prizes, if we will get some new
sponsors. The promised value of the prize will not change, there may
just be a bit more hardware.

NOTE! The prizes are only valid if there are at least three qualified
contributions in each competition.

There will be loads of little prizes in addition to the listed ones like
games, mice etc.

Each winner also gets one free beer after the ceremonies.

STe DEMO

Rules: Demo must work on an STe with 2 Mb of memory.

Autobooting is a must.

Demos must be previously unreleased. Released previews
do not bother us.

One group may attend with several demos.

We don't suggest you to attend with an unfinished demo, but:
The demo must be either released OR you have time to finish
it and you will get the possible prize after you have sent
us a finished version.

Prizes: 1. 0 FIM + Falcon030 4/85 + Software (Worth about 15000 FIM)
2. 2500 FIM + Memory Expansion + Utopos
3. 500 FIM + External disk drive + Utopos

Total: 3000 FIM

STe demo competition is sponsored by ION Finland Ltd., the official
Atari-importer in Finland and Man&Man Co.

STe INTRO

Rules: The computer is Atari STe with 1 Mb.
The maximum lenght of the file is 40960 bytes.
The program MUST be an executable file, no autobooting allowed.

Prizes: 1. 500 FIM + External disk-drive + Utopos
2. 300 FIM + External disk-drive + Utopos
3. 200 FIM + Utopos

Total: 1000 FIM

STe intro competition is sponsored by Man&Man Co.

PC DEMO/INTRO

We are trying hard to get some hardware prizes for PC-competition
to increase the value of the prices.

The demos will be run on 486/66MHz VLB and naturally are HD-installable.

Prizes 1. 2500 FIM + some hardware
2. 1500 FIM + some hardware
3. 1000 FIM

Total: 5000 FIM

If you want more information, call Gore/FC +358-0-427477 (17-22/Sam).

AMIGA DEMO/INTRO

Rules: You can attend with an intro or a demo. (Word demo means also
intro from now on in these rules.)

All demos will be run on an A500, KS1.3, 0.5Mb chip, 0.5Mb fast.

Demos must be previously unreleased.

One group may attend with several demos.

We don't suggest you to attend with an unfinished demo, but:
The demo must be either released OR you have time to finish
it and you will get the possible prize after you have sent
us a finished version.

If there will be enough Amiga-users, the prizes will rise up.

Prizes: 1. 2500 FIM + Asta 2400E MNP5 modem
2. 1500 FIM + Midi-interface with cables
3. 1000 FIM + Helsinki-Stockholm cruise for 2.

Total: 5000 FIM

Amiga intro/demo competition is sponsored by Man&Man Co.

GRAPHICS

Rules: We will not accept copied pictures. A person who tries to
attend with a copied picture will be disqualified from this
and any other competition arranged by us or our allies.
Nobody plays with Aggression.

If a copied picture gets thru our inquisition and wins
something, the author of it is obliged to return the prize
to us when we will notice the cheat.

Pictures must be previously unreleased material.
Everyone should leave min. 3 different stages of his work to
the jury, so they can make sure the picture is not a copy.
Only the last one will take part in to the competition.

Picture must be in IFF or PI1 format.
We will make a slideshow of all qualified pictures.
Pictures will be shown on an STe.

This competition is for all computers: Atari STe can show only
16 of 4096 colors at 320*200 resolution, therefore PC and Amiga
artists have a limited palette and resolution.

Prizes: 1. 1500 FIM
2. 1000 FIM
3. 500 FIM

Total: 3000 FIM

MUSIC

As said before, music competition is for all computers.

Rules: Music must be in 4-channel protracker module format.
No executable files allowed.
Maximum length for the music is 3 minutes.

Prizes: 1. 600 FIM + Midiman midi-to-tape recorder (Worth 1000 FIM)
2. 600 FIM + Midi-interface or other hardware
3. 300 FIM

Total: 1500 FIM

Music competition is sponsored by MS-Music Shop and Man&Man Co.

FALCON030 COMPOS

F030 competitions will be held if there is enough interest.
Please contact us beforehand.

The money prizes are 18500 FIM in total.
The hardware and software prizes are worth of about 25000 FIM.

Happening at the party...

Rave! Friday 23:00-24:00, Teque-in-concert Friday 24:00->
Movies will be shown on big screen.
Various not-so-serious competitions, like hard-disk throwing etc.
We will sell party-socks and -shirts as usual.
Beer drinking competition!
HIFF will be present at the Party!
Utopos-Cup. Utopos is a game by Aggression.
ION Finland Ltd. and other companies will introduce their hardware.
Bloodhouse Ltd. will demonstrate their game STARDUST.

Other rules

To give everyone a wrist-strap which indetifies you as a visitor at Aggressive Party and also indicates whether you can buy alcohol or not, we have to check your identify certificate. If you don't have any ID with you, you will get "red" strap and you can't buy alcohol from restaurants.

You can buy alcohol at our Party, but this doesn't mean you are allowed to make trouble, neither you are allowed to drink your own liqueurs. We do not hesitate to contact police. A little note to those who have had a contact with police during Assembly '93... we know your names and will not let you enter.

Also selling food, disks or hardware is forbidden. This doesn't mean we have very high prices for these, in fact, we will sell disks on non-profit basis, and the food in restaurants is very affordable.

>_is_ MultiTOS compatible, is it not?.

From j.eidsvoog1@genie.geis.com:

> The Warp 9 3.80 update provides Falcon and SpeedoGDOS compatibility.
> It is not compatible with MultiTOS. Although we're working on
> providing MultiTOS compatibility with Warp 9, we're not sure if it's
> even possible with the current version of MultiTOS.

Now, what does "not sure if it's even possible" mean? NVDI does it.

>ut please do NOT accuse the CodeHeads of "just adding pretty
>stuff to increase sales." That's neither true or warranted, IMHO.

IMO, it *is* warranted. Warp-9 cost me $AU60, now they want another $AU50
for an upgrade that does NOTHING. The upgrade adds Falcon and SpeedoGDOS
support. Any Falcon owner who bought Warp-9 and found it didn't work
would be FURIOUS if they were asked to pay for a working version, and
many non-Falcon owners who have purchased SpeedoGDOS will also have
purchased MultiTOS. So the upgrade doesn't offer much to anyone.

If they had added MultiTOS compatibility, that would be a real upgrade.

Since MultiTOS compatibility is POSSIBLE (NVDI), time spent on pretty
screen-savers is time not spent on attaining MultiTOS compatibility.
And is therefore time wasted.

Any ST user user who has not upgraded to a Falcon yet might be interested. Why
don't you visit a Mac dealer to see if your penis is bigger than you can
masterbate with the Mac.

DOES NOT. Here again is information straight from Eidsvoog:

> The Warp 9 3.80 update provides Falcon and SpeedoGDOS compatibility.
> It is not compatible with MultiTOS. Although we're working on
> providing MultiTOS compatibility with Warp 9, we're not sure if it's
> even possible with the current version of MultiTOS.

Sure, MultiTOS compatibility SHOULD have been "the whole point of the latest
version of Warp-9". But it isn't.

Now, to be fair, I must say that they have no doubt done quite a lot
of work to make this version accelerate the Falcon video modes.

I had one a while ago, it was very quiet (and fast!). Don't know much about the
interface though. The one I had was already assembled with a scsi hostadapter
and psu in a metal case. It was made by Lacom of Germany.

So, Richard... did you flame the original guy who posted the original question, and tell HIM that he was in the wrong place..?

Did you tell him ANYTHING to support your view of the state of the Atari market, which was HIS original question..?

I don't think so.. all you seem to want to do is flame me.. too bad..

OK.. YOU show me, and the original guy, where things are NOT considerably more negative than they were six years ago, which was the ORIGINIAL QUESTION.

Sounds like you're doing a considerable amount of whining yourself. I can demonstrate that the Atari market today is considerably worse than it was six years ago, which was the ORIGINAL QUESTION, and my answer was considerably LESS negative than it could have been.

Instead of just whining that you're tired of hearing negative things, why not try to tell the ORIGINAL guy just how great things really are..?

And yes indeed, I still have my Atari computer.. as I've explained OVER AND OVER to the Richard Venables of the net with their Atari Blinders induced reading disabilities, I *like my Atari computer* ... it's the company which has run it into the dirt that is the problem.

Iain, it really does sound like there's a lot going on for the Falcon in the U.K... orders of magnitude more than is happening in the U.S., which is the reason behind my answer to the original question in this thread.

If everything holds true to what's happened in the past, we'll never see most of the things you've described here in the U.S. A few U.K. programs and some German applications have been imported, and a bit of the shareware and PD gets through, but historically very little actually crosses the ocean.

To add to the irony of Atari's non-support of the U.S. market is that they're making a lot of noise about the Jaguar being "Made in the USA", like suddenly they've discovered America.

Can you contrast how things are in your area of the world with the way it was six years ago and truly say things are better in the Atari marketplace..?

You are quite right in what you say, I was however trying to simplify things for someone new to MIDI & it's concepts. I didn't want to get into stuff like having say 64 tracks in a sequence of which only 16 can play at a time.

|> Two examples:
|> 1) I put the basic drum parts on one track, and the percussion overdubs
|> on a separate track. This aids arrangement. But they are on the same

Your 1040 probably has 4x256Kb SIMMS and as such you will have to ditch them. SIMMS are a bit expensive at the moment so hold off for a couple of months or so unless you can source some 2nd hand ones. There is a PD program written by Matthew Lodge (can't remember the name..) that allows you to mix SIMMS to an extent and have, say 2.5Mb by changing 2 of the 256Kb ones for 1Mb ones.

If you`re talking about the C64 emulator I once wrote (I didn't look yet if
it's the one on a.a.u.e) you're wrong: There are not delaying loops at all.
The emlation reaches about one third the speed of the original C64 and I bet
it is absolutely impossible to be faster. (I worked very hard and with a lot
of tricks to get the fastest possible emulation of a 6502 processor.)

I am on vacation in Germany every year .. it took me 15 minutes to find a store
that had PLENTY of Atari hardware .. (City: Kiel, sorry, don't remember the
name, a BIG store though!)

They had CHEAP hardware compared to swedish prices ...

Germany is quite a big market for Atari (look at the amount of programs whose
documentation is PURELY german!)

I have a hard time believing your sis, sorry.

I have bought an ATARI 1040 ST two years ago and I was in Germany at the time. My family who still live there try to use what they have , but it is not much. My sister especially does all her school work using the Word Plus 3.1 the only disk that was available in Germany. Other than that, there are no language disks, games, in short no kind of hardware or software is available for the 1040 ST in Germany. I have not come across to an ATARI dealer here in Seattle, and I would like to hear from those who could give me the address of the closest ATARI dealer so that I can get and send some stuff to my sister. Because with what she has, she simply can't get anything out of that great machine.

Your sister in Germany may be in a better posistion to get hold of any Atari stuff then you in Seattle. Certainly in Germany it still is a 'going' machine, there are still several magazines dedicated to it (have her go to a bookstore) and there are also several shops who 'support' it. Ok, they aren't on every streetcorner anymore but if you page through the magazines you are likely to find some in the vicinity.

If there is a need to I could give you even some addresses in the Netherlands (that's where I am, don't let the email address where this is comming from mislead you).

32. Re: Is CALAMUS ok? What Versions

Newsgroup: comp.sys.atari.st
Date: 1993-10-01 13:57:29 UTC
From: David L Watson <dw4g+@andrew.cmu.edu>
Message-ID: <Mgf3R9m00Vp2MFZ20N@andrew.cmu.edu>
Source record: 200211

Just to clear something up about Calamus SL. I recently took a 2 meg machine to school thinking I could use SL on it (It had worked fine on my 4 meg machine). It will run, but it freezes up anytime I try to open PKS Write (for anybody out there that doesn't know, this is the name for the text editor). Setting up virtual memory doesn't help.
So my suggestion for anybody looking in to buying Calamus SL: Don't plan to run it on anything with less than 4 megs. Besides, it's such a powerful program running it on that small of a system isn't worth it.

David Watson

Uh, Bob, it might help if you remind us (or Patrick or whomever) of
what the topic is in this thread (since there's a lot of topics going on).
I mean, between here, GEnie, and some BBS's, it's kinda hard to keep
track (especially for those of us with limited memory :-)

Anyways, if ya gotta flame (which is more appropriate in email
anyways) can ya keep us informed on what you're talking about?
Thanks...

>/* game features */
>/* #define POLYSELF /* Polymorph self code by Ken Arromdee */

> BUMMER!

:-) Yeah, I like that part of the code as well. Lucky I've got enough
memory to run the full version...

Maybe I'll try to retain this feature next time (in 3.1.4). It's kind
of hard to experiment a lot with leaving in/kicking out these game
features as it takes a full recompile each time something changes in
config.h.

The 1 meg binary, as it is now, comes fairly close to what can be
squeezed into a 1 meg machine (I think) and for the POLYSELF code to
fit in as well I suspect something else would have to go (but what?).
Also, I have almost no idea about how much memory must still be free
after the game has loaded, i.e. the question is, does the game
allocate much memory while running, or is this negligible?

CSB and DM both have boot sectors, if you turn the falcon off and then on with
the disk in a: then the falcon will boot it.

If the disk doesn't have a boot sector then you need to press alt as above
but alternatively you can use magi or backwards to boot from a:.

Falcon Support.

Well, I'm designing 2 adventures for the Falcon, rewriting
the POV raytracing stuff to take advantage of the DSP, a DSP ai program
(which theoretically should work, but I need to tap my flatmates expertise
to be sure), as well as a horary/competition astrology program.

No finish dates expected for some time as I am pretty busy running my
normal business and some other stuff.

Nethack comes in 2 flavors - the original character based version which is OK but I looked at it and then wiped it. Warwick has done a splendid job of making it graphical. It's now 16 colour, runs in windows and very much more fun. It's very like Rogue or Temple of Apshai in that you look at it from above and use keyboard commands for playing.

It's VERY addictive, and very large (2Mb of HD space), The archive is 1Mb. Well worth getting though. It's on umich BTW.

>
>My in-laws want an Atari software package to keep track of their small
>dress-making business, to keep track of customer lists, inventory and
>accounting. Can someone suggest something CHEAP?

From the International TOS Software Catalog:

------------------------ Quotation Begins ------------------------
Accounts 2.0

Accounts is a brand-new concept to solve the accounting headaches of
small and medium-sized companies. Accounts receivable, accounts
payable, inventory control, and general ledger features are totally
integrated allowing full and immediate communication within the
program.

Batch inviocing and order entry for both sales and purchases are
handled by the system and all printed output from the computer can
be altered, amended, or entirely reconfigured by the user to suit
specific needs by utilizing the powerful report generator.

The Accounts integrated accounting package is specifically designed
for the first-time user of a business computer system. It is written
totally within GEM, fully utilizing the graphics and mouse capabilities,
and provides on-line help in every transaction.

Language: English
Features: Monochrome or Color Monitor
Compatibility: 520ST/STE Mega ST/STE
1040ST/STE TT030
Falcon/030
Availability: Now from DMC Publishing (USA and Canada)
DMC Publishing
2800 John Street #10
Markham, ON L3R 0E2
Canada
(416) 479-1880
(416) 479-1882 (Fax)
Price (Suggested): $149.95

--------------------------- Quotation Ends ---------------------------

While $149.95 isn't exactly *cheap* (anything over $5.00 is expensive,
in my opinion), it does appear to meet all of your needs. Check with
your local dealer for details, or write to DMC Publishing and ask for
a brochure.

You might also direct your request to Hi-Tech Advisers (P.O. Box 128, Ravena, NY, 12143, (518) 756-3800 or (800) 882-4310; (518) 756-3539 Fax), as they have a suite of programs that would perform the same function. Each package appears to be priced at $69.00, with an occasional exception at $49.00. Typical package titles: Accounts Payable. Accounts Receivable. General Ledger. Inventory-Pro. Mail-Pro. Sales-Pro.

This is not a recommendation: I haven't used this software, and can't comment on it's suitability for your desired use. Check out the brochures and claims before you buy.

Good luck in your endeavors!

Well, I thought of emailing BobR a UUencoded Cubase Audio file, it's only
5MB ;^) He failed to mention that to get Cubase Audio working on a MAC
you need to invest big $$$ in extra hardware. On a Falcon you just plug in
the 44.1KHz clock and off you go.

Even if it's available tomorrow, as previous experience shows, it will take a few releases before a bug 'free' version is available. Get 4.04 and wait for 5.06 before upgrading again. That's what I plan to do.

> I don't see why programs wouldn't run without memory protection..??

Well, technicaly a UN*X box memory protection or virtual memory. And vm is
only needed when running lots of progs. You need however memory protection
for very practical reason --> programs crashes. It is not uncommon for
pointers to point to unknown location. And according to murphy these would
point to some very crushial variable. So, although you don't really need it
(see minix for the ST), you don't want to do without it. Much more important
is some sort of realocation of running programs. Atari progs can't be
relocated after they are relocated, and this is needed for something like
fork() according to the UN*X semantics.

Gerco.

44. Notator Logic upgrade - $299 worth it?

Newsgroup: comp.sys.atari.st
Date: 1993-10-01 17:15:29 UTC
From: selick@csa.bu.edu
Message-ID: <28hojh$7pn@news.bu.edu>
Source record: 200217

I finally received an advertising packet from E-Magic, after months of faxes and phone calls, and it seems that they want $299 US for the upgrade from the C-Lab Notator. The big question is, is this really worth it? I mean, what can I do with this program that I can't do with the other Notator? I suppose the only real reason to do this is so that I can insure support for my $699 Notator program. Boy, this is a sleezy industry! And they make it out to look like I'm getting such a bargain..."Save $599 to $900" and so on...

Later,
Steve

49. Dumb questions re 1040ST

Newsgroup: comp.sys.atari.st
Date: 1993-10-01 20:19:17 UTC
From: rodr@netcom.com
Message-ID: <rodrCE8J45.AHJ@netcom.com>
Source record: 200228

I have just rescued an old 1040ST (circa 1986) from my basement
to send to my sister. I have some questions related to making it
moderately useful in 1993:

(1) It currently boots up via an "ST Language Disk" containing GEM
and BASIC and Logo. I've seen some references here to TOS.
What is the current operating system of choice, and how can
I get it? Something simple, preferably.

(2) The built-in VT52 emulator is not that great because it has no
file transfer and because the modem speed choices are 300,
1200, 4800 and 9600 BPS - no 2400! What's a good (preferably free)
comm program that will run on this system? I needs to be easy
to use -- my sister is no hacker.

(3) Can the ST really read MS-DOS-formatted diskettes? I'm wondering
if I can download Atari comm software to my DOS system and
just make a diskette to get it to the 1040ST.

Please email your reply to "rodr@netcom.com". I will summarize
any that are of general interest here. Thanks!!

One more time BobbieR, and maybe you'll actually READ what I write--

I am not wearing 'blinders'; I agree that Atari management is a pathological case history of how NOT to run a computer business; and I agree that the situation has changed over the last 10 or 12 years. However, there are STILL 4 or 5 places I can go in the Washington D.C. area and buy Atari software and hardware; there are STILL Atari-specific magazines; and there are STILL new products coming out from third parties; they're just not same ones as 6 years ago. So what? I'm sorry if you live in some sort of Atari vacuum, but it is just not the universal situation, as Iain, Patrik, George, and others have pointed out. And I think that does answer the original question. And you still haven't provided any evidence to support your point of view; you keep claiming "things are MUCH worse", but where's the proof? I maintain it's really about the same as always; no marketing and very little active support from Atari Corp.; it's been that way since Nolan Bushnell left.

Finally, since comp.sys.atari.st is SUPPOSED to be a more technical newsgroup, I respectfully suggest that your bashing of Atari management is out of place, and more properly belongs in the comp.sys.atari.advocacy newsgroup. And yes, I have suggested the same to some Falcon boosters as well; this discussion is really out of place, and I still feel your remarks, while not wrong, reflect only your personal experience and opinion, and are as misleading as those which claim everything is wonderful.

Comeau C++ 3.0 With Templates is finally on its final massagings,
so that will finally be available shortly. You ask non-trivial
questions though, as besides just issues of recompiling your code
with a C++ compiler, you also ask: which new features you should use,
do you designs change, etc. YOu should definitely pick up some of
the more popular and strong texts out there, and if this is for
something serious, perhaps not embark on it just yet, but instead
do "lesser" things with C++ for now.o

Hello fellow netters,

I have a question:

Is Atari still supporting the TT line (i.e. are they still be
manufactured)?

Any help will be appreciated.

I've had a Mega ST 2 for over 4 years now, and I like to finally upgrade
with a little more power. Some programs are a little to slow on
my computer (eg. PageStream).

If the TT is still manufactured, can it be gotten without a hard drive?
I have an external SCSI I recently got and I can still use that. All I
need is the computer (w/at least 4 MBs of RAM, and preferable the
32Mhz CPU), the keyboard, and monitor (unless my SC124 and SC1224
can work with it). And what cost am I dealing with?

The Mega STe is not worth the cost for the increase in performance,
and I'm not sure about the Falcon (eg. performance vs TT, keyboard
integrated with the box like the 1040ST, etc...).

Thanks to anybody who responds,

--ewh

P.S. I made a post about paint packages awhile back. I got little
response. If any are interested in what I did get, just drop
me a message and I'll summarize it and send it to you when I
can (I haven't forgotten you, Erlend Nagel; work's been tying me
down).

>Netherlands. Hopefully ACN/ST Nieuws will start carrying it.

>Yes, I highly recommend the book for all programmer types.

I'd second the recommendation, it is definitely a much better document than
the collection of stuff we've had to deal with so far. Although, despite its
great size, it is not an exhaustive reference. The hardware section talks
about the special hardware in STe/TT/Falcon, but there's no coverage at all
of the hardware in common with regular STs, e.g., 68901, PSG, etc. It won't
completely replace *all* of your other docs, but it will come darn near it.
I figure that in addition to the Concise Atari Reference (or whatever that
book is named, it's a British title...) you're completely covered.

The OS coverage is, without a doubt, incomparable. Complete info on GEMDOS,
GEM, BIOS/XBIOS, including MiNT and MetaDOS extensions, MultiTOS/Multi-AES,
and AES features up to the stuff to be released in TOS 5.0. (Yeah, I bought
a copy of the book at the Glendale show...)

GCC uses Sun-3 a.out format for its .o files, but the linker writes out DRI
format symbol info in the executable files. (Or GST format, if you ask for
it...)

Ofir, it's apparent now that I should have included the phrase "in the US"
in my answer to the original question in this thread.

From your reply, and those of Iain and others, it appears that there is a
great deal more support for the Falcon in the U.K. than I was aware of.

The author of the question seemed to live in the U.S. though, so with the
addition of the phrase, "in the U.S.", I think my answer is still valid.

The problem is that while we've seen a number of games from the U.K. for
the ST series, there hasn't been all that much that has made the trip across
the ocean to the U.S., and I don't see any difference for the Falcon
(so far...)

Thanks for your comments.. it helps to know there's something out there.

Robert Anisko had an excellent suggestion... (this terminal doesn't
give me anywhere the editing capabilities of Flash, so quoting and attributin
is difficult, but thanks to Chris H., here's the original question in
this thread...)
In <284nbl$qfp@news.u.washington.edu>, Shake the Disease writes:
> What kind of spport is out there for the Falcon? I used an Atari ST some
> six years ago and loved the machine, but hated the lack of support. I may
> look into the purchase of a Falcon if the support factor is large enough to
> justify the purchase.

(Note the U.S. return address...)

My reply was that support is much worse than it was six years ago, Atari
has destroyed its dealer network, and there is no advertising for its
products.

(I should have added, "in the U.S.")

Instead of flaming me for my answer, how about someone else trying to
answer the question..?

Richard Venable said I never offer any proof for anything I say here..
I thought the "proof" was pretty self-evident.

Pick up any local U.S. Telephone book and try to find a dealer selling Atari
products.

Open any U.S. computer (or other) magazine and try to find an Atari ad.

If you CAN find an Atari magazine that hasn't gone out of business, open
to the index of advertisers and count the number of entries, then compare
that to the level of support that existed six years ago.

As I've said, this was NOT intended to be a long, drawn out flame war. It
was intended to be a simple answer to a simple question.

If anyone doesn't like the answer, flame Atari for making it this way.

Cross-posted to: misc.forsale,kw.forsale,uw.forsale,ont.forsale,comp.sys.atari.st,uw.sys.atari,rec.music.makers.synth

Greetings! I am about to sell my Mega 4 system. Below is a list of what
is available and my prices in US funds. These prices do not include
shipping. I am willing to sell bits and pieces separately. I am also
willing to trade bits for a 30meg or 60meg hard disk. You see, I have
changed platforms (a mac) and I no longer need this system, *but* I am going
to keep my 1040 because I still want to stick with Atari for music. I'd
like to put a small hard disk on the 1040 (115meg is too large). A 30M
system would be ideal.

One other thing to note, I will sell either a 125 or a 1224 but not both.
It all depends on what sort of interest I get. Feel free to haggle with me
but these prices are almost firm.

If you want the whole sha-bang (with one monitor), I will let it all go for
$1200US plus shipping.

Brett Maraldo
tel: 519 742 0370

Atari Mega ST4 300US
ICD 115M hard disk 300US
Practical Peripherals PM2400fx96 fax modem 90US great with STraight FAX

It's possible that some programs are slower during initialization when you have many fonts; but I don't believe that it's making a difference after that.

OK, "Richie"...

So you have dealers nearby.. good for you.

The State of Michigan used to have so many dealers that a visiting magazine article author was amazed.. to the point of actually writing an article about all the dealers he visited on his trip.

There are now something like TWO dealers in the entire State.

There are entire States which have NO dealers.

Six years ago, there were Atari dealers all over the U.S.A.

Today there are only a handfull left.

If you don't accept that fact as "evidence" that Atari has destroyed its dealer network (my original statement in answer to the original question), then I submit that your Atari blinders ARE firmly clamped over your eyes, and you will refuse to see anything except what you WANT to see.

Yes, there are U.S. Atari magazines. But...

You conveniently omitted telling us how many there are, compared to six years ago. Would you like to try comparing those figures for us..?

Or do your Atari blinders prevent you from counting on the fingers of one hand..?

You say "so what?" to the fact that probably 90% of the companies which were supporting the Atari market six years ago have either gone out of business or have changed to other, more stable and reliable platforms in order to survive.

There ARE a few new companies that have appeared on the Atari scene in the past six years... however you conveniently omitted telling us just how many there are, compared with the situation six years ago..

Which was the ORIGINAL question in this thread.

You say I haven't presented any "evidence" to back up my statements..?

I submit that you seem to fall into that same characterization...

Give us some evidence that things are better in the Atari marketplace than they were six years ago (which was the ORIGINAL question)..

Not "there are STILL" a few dealers hanging on.. or there are STILL a few Atari specific magazines eking out a living in the barren Atari marketplace,

but that things are BETTER than they were six years ago...

(Which was the ORIGINAL question)

Try hard, Richie... your Atari blinders are slipping...

(By the way, as I've said before, and again, this was not intended to become an extended flamewar.. it was a simple answer to a simple question. There was no reason for it to have become anything else...)

By the way, the "technical" newsgroup is comp.sys.atari.tech

If the comp.sys.atari.st newsgroup can't be used by a former ST owner to ask how the state of the marketplace is doing, then I submit that we've lost a lot more than just dealers and magazines.

A simple answer to a simple question shouldn't need days of wrangling to justify its existance.

CL> .GIF pictures. Does it require 1MEG or more. Does it require >
CL> TOS 1.0, or a H.D.??
CL> any info would be appreciated!

Calamus is a really GREAT program. There are three versions:

Calamus 1.09 : "Old" version, still nice though...
Calamus S : The "hobby" version
Calamus SL : The professional version

You CAN run Calamus 1.09 from disks, I wouldn't even think about running
the other versions from disk... The more memory you have, the better (the
best is 4 megs, but 2 or 3 will do as well...)

Calamus supports *LOTS* of printers. 9- and 24-neddle, deskjets,
laserprinters and even those linotronic typesetting devices (which will put
you back a mere ?10.000 a piece... :-)

I don't know if there are any limitations to TOS versions. Though I
wouldn't be surprised if TOS 1.0 is not supported (too old and slow) I'm
not sure on that one though...

The difference between Calamus S and SL is the way these programs work with
colours (yes, the DO support colours) Calamus SL is a little more
"mature".. But a lot more expensive as well!

All versions of Calamus run in monochrome only. Screen-enlarging hardware
and such IS supported.

I hope this will give you some idea...

See ya!

There are no good Shareware faxprograms..

But why shareware..?? If you got a good Faxmodem its worth BUYING
a Faxsoft.. The best FaxSoftwares to ST is in my opinion Qfax and StraightFax.
You will find them very usefull.

[massive tale of Atari woe and misfortune deleted]

Well..... just out of curiosity, given this track record you state, why do you stick with the platform? If the machine can't do what you need, then the loss of software developers and hardware support from 3rd parties would make it pretty "dead". If it still serves your needs, you might not need to jump ship.

I agree other platforms have passed the ST by in lots of features, and the Falcon is mediocre compared to the latest Intel or MIPS box. However, I can do what I want just well enough on an Atari (for the right price, no less) to keep my Mega 4. Heck, given the money (which is coming) i hope to have a Falcon to do some MIDI stuff on (it'll be faster than the Mega, and have the digital audio capability, hence that decision).

Hmm..well I konw of a very well-known German Fax program, Q-Fax and Q-Fax Pro
I think was it's name...it wasn't shareware however, also I am sure that TKR
have something for the Atari, considering that they are doing Atari Stuff i.e.
CRDOTS and are very popoular modems (fax) in Germany.

I heard a lot of good things about Q-Fax..I think you can get it via Richter
Distributor in Germany.

Hope I couldhelp

I use TeleOffice from TKR in Germany. And it's the best I have used.
Can send faxes from wordprocessors and DTP-programs very easily.
Also has a build in "mini-DTP" that enables you to load text and
picutures and construct a fax really fast without any DTP-program.
Printing of incoming faxes uses standard GDOS-printerdriver.
TeleOffice supports both Class2 and Sierra-class fax-modems.
(work with MultiTos too, at least it worked on MEGA STE and TT)

That should be "Windoze NT" in the last sentence; most people use
Windoze 3.1 in 4M of RAM, which IMHO, isn't very nice. It's somewhat
better in 8M, but then you shoul be running OS/2 2.1 anyway...

Guess I'm stuck waiting for a PowerPC-based machine with NeXTstep; Atari
refuses to give us a powerful machine, and the Intel-based world doesn't
really give us much (though I don't mind OS/2; definitely more useful
than the Micro$oft alternatives).

> need MultiTOS to do that on my ST?

Like the PC, you just need the right tools. Try this:

ACCs - MaxiFile, STalker 3 or Connect
Run - your word processor

Voila; and the file transfers will even work (unlike modem work under
Windoze).

Or maybe try this (unde MiNT):

ACCs - TOSWIN
Run - your word processor

Open a shell in TOSWIN and a text-mode term program and voila; the
multitasking will help for other things, too. Usually when I do this, I
load TOSWIN as an ACC, open a shell and MicroEMACS, then run STalker as
a program (I have problems loading ACCs under MiNT for some reason; much
like every PC I've ever used has sever problems when you add network
drivers).

Works pretty good, even on such a pathetically slow system (Warwick
refuses to send me his TT! :-).

On a Falcon040, this setup would be great; when will Atari release
one?!?

^^^^^^^^^^^^^^^^^^

Unfortunately, that's not all true; unless I've missed something
really important (IMHO), there still aren't interrupt-driven
multitaskable disk I/O drivers for MiNT. Like Windoze (but unlike OS/2
or unix), the system halts when you format a disk. :-(

> alone is just not this cooperative... I have to use Windows at work,
> and find Multitos a lot nicer.

Anything is nicer than Windoze. The "easy-to-use User Interface" makes
me want to pull my hair out... ugly and clunky.

I just downloaded the demo of the game 'Space Junk' for the Falcon. All I have to say is W O W ! If this is the type of game that it going to be released for the Falcon then I'm glad I have one!

Full motion video! Stereo sound! Spectacular Graphics! (And it appears it will have pretty good gameplay as well!)

Anyway, I've uploaded the demo to 'atari.archive.umich.edu' and 'ftp.uni-kl.de' so check it out and tell me what you think! The demo is 4 meg zipped and 7+ meg unzipped!

Enjoy,

Source record: 200329

On Friday, I uploaded SilkMouse 3.1 to atari.archive.umich.edu; the archive name is slkmse31.zoo.

SilkMouse is a really great mouse accelarator, written by a gent on GEnie (unfortunately, I've forgotten his name! yipes...). SilkMouse has all the usual mouse accelarator features, and also lets you set things up so that moving the mouse 2.54 cm (1" for those of you int he Dark Ages) on the mouse pad moves it 2.54 cm on screen... very nice and smooth!

Please note that at this time, SilkMouse 3.1 and BeforeDawn 1.25 do _not_ work together. I've sent a copy of SilkMouse in email to Arne Rudolph (author of BeforeDawn), so he'll be able to shed more light on this subject. (I'm guessing it's a slight problem with BeforeDawn; on my machine, the previous version had te same problems with Atari's Maccel3.)

Dateline Atari! with Bob Brodie
Oct. 1, 1993

Host - Lou Rocha

<[Host] ST.LOU> Good evening and welcome to Dateline Atari! with
Bob Brodie. It is my pleasure to welcome Bob to our monthly gathering
on GEnie, the official online home of Atari Corp. Our guest is Bob
Brodie, Director of Communications for Atari.

As we begin tonight's session, I would like to once again thank Bob
for his live conference from the Glendale show on September 18th. The
transcript is available here in library 13 of the ST RoundTable. That
conference generated a lot of interest, specifically around the Jaguar
rollout. We also heard a little more about TT production and I see
that a Current Notes ad for Computer Studio says they will be
restocking soon.

Bob's Glendale conference was picked up by Atari Explorer Online and
published in AEO_2016. Apparently, another online magazine also picked
up the transcript and used it to provide their own show 'report'
(along with an error that has become routine in their reporting). I
guess we should be flattered .

There is one other item of business to clear up related to the
Glendale conference. In response to my question to sysop Mike Allen
about the demos at the Lexicor booth, Mike posted that he hadn't seen
the booth because of the crowds but that he thought it was near the
washrooms. It has been noted that Lexicor posted some objection to
this comment on another service. In checking with show organizer John
King Tarpinian, it seems there were some booths in the area and one
was mistaken as the Lexicor booth. In fact, Lexicor was unable to
attend the show due to last minute problems. On behalf of Mike and
myself, we regret the error.
```

This evening I anticipate lots of questions about the Jaguar, the Falcon, TT production, Atari stock and a number of other related topics. I am ready to open the floodgates after Bob's opening comments. Sit back and enjoy the October Dateline at GEnie's new reduced rates. Bob, the floor is yours! GA

Good evening, one and all! Welcome to the October installment of our Dateline: Atari session!!!

It's crunch time here at Atari. Upstairs, even as I type this, there is a host of people hard at work on getting Jaguar titles ready to send out the door for the big Jaguar roll out next month. Game testers, programmers, artists, and musicians are all on hand as we labor to get this exciting product out the door.

Earlier this week I had an opportunity to take a fresh look at how some of the titles for the Jaguar are coming along. To say that I'm impressed is an understatement! The art work on the titles is truly striking, and the game play has improved dramatically since I last visited them.

This month, you'll have a chance of the initial reactions of some of the game press. Be sure to check out the October issue of Game Pro, where the Cutting Edge feature showcases the Jaguar in a full four color page layout. Just Fed Ex'ed up to me today is issue 11 of The Die Hard Game Fan...possibly one of the most colorful magazine out on the market has started a whole new section for the Jaguar called "Jaguar's Domain", as well as a really flattering editorial about the Jaguar. The Jaguar's Domain also features a four page, full color layout of screen shots from Jaguar titles including Raiden, Tiny Toons, Crescent Galaxy, Club Drive, Cybermorph, and more. Be sure to look for copies of those screen shots to be uploaded here to GEnie, our official online service! As always, you'll find these files online here FIRST!!! The pictures will be 24 true color Targa files, so you will have a chance to see the images in the very best possible format.

On the computer front, we just completed a terrific show in Glendale, and the sales results were terrific. The San Diego Computer Club also hosted a multiplatform event, which the Atari Club won an award for the best booth for their presentation of MIDI Maze at the show. Congratulations to both John King Tarpinian for another successful Glendale Show, and to the members of SDACE for their efforts at making their appearance a success at the show.

With all of the hectic preparations here at Atari for the Jaguar, I regret that time hasn't given me more time to prepare a long set of opening remarks. So, rather than tie up our time any longer, let's cut straight to our users and their questions, Lou. As always, I'm excited to meet with all of our customers here on our official online service, GEnie. Let's go, Lou.

<[Sir Fransis] K.DRAKE> Bob, are there any plans in the immediate (spring '94) future to introduce any advanced controllers? By advanced, I mean (NO GUNS) a steering wheel or analog joystick.

Hi Kenneth, I am not aware of any plans for Atari to do so,
but spoke with a game developer earlier this week that is working on a
fighting game to compete with Street Fighter II. He plans on making a
new controller to sell along with the game.

<[steve] S.OLSON2> Can you give us a time frame of when to expect the
next list of developers and can you give a background of some of the
little known ones already announced?

Hi Steve, hmmmm we really haven't set a date for another
press release to do that. What I plan on doing is meeting with Bill
Rehbock late next week (he's out of town right now) to discuss the
"credentials" of the developers.

I agree with you that we need to do a better job of telling
the public who the developers are. Some of the names that are in the
press release are the finest game developers in Europe.

<[steve] S.OLSON2> Bob, real quick can you explain why EGM has a biased
against Atari and will they get a black box so they can rate lynx games
again?

I've had a number of discussions with EGM about their
attitude about Atari. There is hope for things to improve. I think part
of the issue might be that there are a number of people there that are
former employees of Atari, including the publisher.

On the other hand, when they go out of their way to blast
the president of the company in a sister publication of theirs, they
don't give me a lot of ammo to try to change the way things are between
us.

Re the Black Box...they don't need a black box to rate the
games. We send them pre-release eprom cartridges of the games, and
provide them with slides of screen shots of the games. This is the same
level of support that we give to all of the other magazines as well, and
none of them are complaining about. The reality is that the "Black Box"
is a development tool, not just something to take screen shots with. It
is NOT an essential tool for them to have for their Lynx coverage.

Bob, will there be a CD-rom derived from the Jags for a low
cost Falcon one? I would like to say that as a new Falcon owner that
Atari Must take the SCSI to DMA (SLM) project in house and DELIVER as
promised! Any comments?

No the interface for the Jaguar CD ROM is different from
the Falcons, so I don't see that as a common project. I share your
thoughts about seeing the SCSI to DMA project getting done, and spoke
with Bill about it at length earlier this week. I can assure you that he
is working on a solution, and believes that it is close at hand.

<[Sam030] SAM-RAPP> Hey Bob! Can you give any SPECIFICS as to Jaguars
where/when? Are there boxed production units in a warehouse somewhere?
Can I have one? Now? Please? ;-) AND.... Is there anyone on GEnie that

can discuss the Jaguar development process in the RT? Thanks!!

Hi Sam, as to exact locations, no...I can't give you that information tonight. No, there are not stacks of boxed productions units sitting in a warehouse somewhere, but there has been a pilot production run made, and now units are being sent to developers for use, and to potential developers for evalution.

Bill Rehbock is capable of discussing the development process, but I don't think he has the time to do it, at least right now. Please understand that it really is a "CRUNCH TIME" for us here right now. We're all trying to stay very focused on getting a quality product out the door with a great release as well.

<[Sam030] SAM-RAPP> When will the first consumer run be made?

Rather than tell you when it's being made, look for it to be available for purchase (much more significant) the weekend after Thanksgiving.

<[Host] ST.LOU> Is that Canadian Thanksgiving, Bob? :-)

We're not shipping to Canada til '94, Lou. Sorry.

<[SPEEDO Racer] J.TORRES17> This may have been covered previously... Since I am nowhere near a test market. Is Atari going to set up a 1800 number (like for the LYNX) and a Jaguar help line?

Initially, we will not have the Jaguar available for sale via the 800 line. This is at the request of our retailers. Yes, there will be a Jaguar section on our help line to give out hints, tips, and easter eggs.

<[Graham] B.STEVAN> Bob, thanks for joining us again tonight. I have a question(s) about Atari's servicing. We spoke to Shirley Taylor just yesterday regarding a bunch of Portfolios we sent back for an exchange. We were informed that NO Portfolios will be available until the NEW YEAR! The customers have already been waiting for about 2 months, as we had to try to get an RMA#, then had to wait for delivery to Atari, then wait to get info from Atari. Needless to say we have several customers that are very angry! We also have a similar situation with 2 1040STe warranty units that we sent down. My question is...what is causing the delays with the Portfolios? Why does Atari seem to treat customer service as a low priority, the lack of parts and replacement units being an example. On the positive side I have had tons of customers asking about the Jaguar. Is there any chance Atari would consider releasing it everywhere before X-Mas rather than just the announced test markets. I can't see any reason (other than lack of promotion) why the Jaguar wouldn't succeed everywhere, especially if a ton of them were sold over Christmas.

Hi Graham, Shirley is being a bit pessimistic about the Portfolio situation. We simply ran out of units, and as I'm sure you

know, we typically replace the defective Ports with another. We are bringing in Ports from another subsidiary in Europe to re-stock our supply, but are finding that we need to have a subcontractor to rework the keyboards to a North American type set. Finding the right company to do that is a bit of a problem right now. We changed our entire manufacturing and warranty process on the Falcon030 so that we would be providing our customers with .... higher level of customer service, and eliminated the need to replace on board components. Instead on the Falcon, all that needs to be done is that there are 6 main components that a dealer has to worry about replacing. The keyboard, the ram board, the floppy disk, the hard disk, the power supply and the mother board. So you see, we ARE improving our efforts at making service much more efficent.

Re the Jaguar...remember that the chipsets Tom and Jerry, are very special chips. We will not be able to get more than 50,000 units made before the holiday season. We feel that we can sell that many units in the markets that we've chosen. In addition to that, we can do a very well planned, and executed campaign in those two cities.... for an affordable amount of money. Trying to go national or global at this point is simply too expensive in terms of promoting the product.

<[Sir Fransis] K.DRAKE> Will the .GIFs be uploaded right after the conference? Also, the polygon game screenshots are non-texture mapped. Is this by design or for necessity?

Not right after the conference, but thanks for your interest. :) I will be sending some to the staff of Atari Explorer Online for them to bundle with their issue, and allow them (just like we do the other mags) decide which ones they want to see printed. Re the polygon screen shots, gee...I don't know. Sorry.

<[DarkChild] R.HALL49> This question applies to when the cd-rom unit is in place because I know that video\audio takes up an enormous amount of storage space, but how does video playback look? ummmm I don't mean digital "stills" either...thanx ga.

It looks terrific! We won't have any of the "loading" messages that some of the other CD units have.

<[Chris] C.OATES2> A while back, the possibility of a Falcon special issue of BAM was mentioned. Was this shelved or just delayed? Also, any other Falcon related Press coverage lately?

Chris, I don't know what happened to that special issue of BAM. James isn't on hand for me to consult tonight on that. My best guess would be that they decided to hold off with it until they have a real "killer app" like Cubase Audio for Falcon to really showcase the unit. And no, we've not pursued any additional press on the Falcon lately.

<[Iver] I.POSSEHL1> Bob - I'm looking for a dealer near Fargo, North Dakota. Could you again give us the number to call at Atari for this

info? I'm getting the itch to buy a Falcon. :-) Also - for those of us living in the sticks. Will there be a way to mail-order a Jaguar?

Hi Iver, I'm sorry that we don't have a dealer in North Dakota right now. We are in discussions with a VAR in Mynot, but nothing has been firmed up yet. From North Dakota, I'd say your closest dealers are in Minnesota. Try Roger Doger Music in North Hopkins, MN. The phone number is 612-932-9441. Re the Jaguar...in 1994 we'll be going National, so you should be able to buy via mail order then.

Bob, there has been a lot of speculation about TOS 5 lately. Is this a new TOS for the falcon or will it be for general use like TOS 2.06?

Charlie, I'm not 100% sure on that. From what I know, the plans for TOS 5 are "Multi-TOS" like...I don't expect it to be an EPROM or ROM for the other machines. But I really want to empahsize that I'm not up to speed on that. Sorry.

Will Atari try to censore either violent or sexually(R rated in movie land) orientated games? When will the ad's for the Jag start showing up? When will the V.R. helment be anounced, as it should cause an ATC stock leap.

I am not aware of any plans to censor any of the titles. However, I have also not seen any titles to date that might have those kind of problems (specifically sex and violence). The only thing I can point to is the Dracula game, which had been "accused" having a lot of cleavage in a couple of scenes with the brides of Dracula. Most of the ads will run concurrent with when the Jaguar is released for sale. And the VR helmet is not a project that we're doing, there is a developer doing it, so I can't comment on when that will be done.

<[F.S.U. #1!] AEO.MAG> Bob, while in my lurkings on several online nets, I've seen people claim that mail order houses are NOW taking orders for Jaguars. Some houses (I don't remember any names) were claiming 1993 delivery. Some, even October 1993 delivery. Would you care to comment on that before Atari gets a "black eye" from these tactics?

<[F.S. WHO???] BOB-BRODIE> Sure Travis, we have a very clear policy on mail order for the Jaguar. We are not selling to any of the mail order firms this year. We will, however, be selling to a single distributor in NYC. We expect that he will be able to sell his units in the metro NY area. The possiblity exists that there may be a few units that do make it to the mail order arena. We also expect that at least one of the retailers will, over our objections, try to go national with their units.

<[Kool-Aid Man] C.CASSADAY> Bob, can you comment on the rumor about Dallas being a third test market for the Jaguar? Also, the picture of the Jaguar in the October GAMEPRO only shows three plugs and the expansion bus. (I think... I lent the issue out to a friend.) Has the Jaguar changed since GAMEPRO took the pictures of it? I ask this because

of the statement by Atari that the Jaguar has SVHS, Composite, etc. video. Are there more video ports on the sides of the Jaguar?

I've got my issue right here, Chris...lemme look at what the shot. Ah, nope. They are showing the correct images. The S Video output comes off the expansion port on the rear on the unit, as shown on page 16 of the October issue of GAME PRO. We're making a separate set of cables that will give SVIDEO, RGB, etc. The RF connector is just to the side of the expansion ports. BTW, the screen shots that are in Game Pro were taken with an RGB cable connected up to a Jaguar unit, with input to a video board on a Mac.

<[Steve @ NLS] STEVE-J> Is the Jaguar price DEFINITELY set now (at $199.95 or whatever)? We've only been told "around $200" so far. Also, one of the mags said the 'JagCD' might cost as much as $350 -- can you say it WILL only be $200-$250? GA

There are no plans for the Jaguar's CD unit to cost as much as $350. May I ask where you read that?

<[Steve @ NLS] STEVE-J> It was one of the game mags, but I forget which.

Does Ralph do a game mag now??? :)

<[SPEEDO Racer] J.TORRES17> Is Atari developing CD's for the STe/Falcon? Encyclopedias? Jaguar Encyclopedia? Can you hook a Jaguar to a SC1435?

We are creating a developer CD for the Falcon. But not encyclopedias. We don't have enough manpower here to be able to do a project like that ourselves. We have suggested to a number of developers that it would be a good project for them to do. Hopefully, one of them will be up to the task. Re the Jaguar to an SC1435...YES! And it looks fabulous!!!

Will Atari have a booth at WCES. If so, how big and where? <:^)

Our recently hired marketing director, Terry Valeski, is hard at work on a number of things, inlcuding the CES Show. I don't know where our booth will be, but I'm sure we will have a very big presence at the show. We really want to show the Jaguar off in a big way at this show.

<[DarkChild] R.HALL49> With price cuts by nearly every other competitor, will we see a slash in the price of the Falcon? (I think it's worth every cent...but am curious). Same question in regards to the STe (especially with the STe price cuts in the UK). One more thing, is there a cd-rom being developed for the Falcon...would love to see this even though the user-base is still small (for now). Oh yeah, ATARI RULES!!! (overly enthusiastic shot in the arm!) thanx GA. oops, Joe took my question...

Ron, there are presently no plans to cut prices on the Falcon030. Here in the US, we're not selling the STE at this time, so we

can't cut the price on the unit. :) The Falcon030 can use industry standard CD ROMs _right now_ via the SCSI port. There are even developers with CD ROM products for the Atari Falcon030. Send email here on GEnie to GREG for information on his products. That's Greg Kopchak. I'm sure he has a topic in the Bulletin Board as well.

<[Sam 030] SAM-RAPP> Hi again Bob! While waiting for my Jaguar T-shirt I was wondering what the pack-in will be?

Sam, you're greedy! I tell ya gang, I sent this guy a really neat RED Atari hat (limited edition, mind you!), and a truly cool Lynx T-Shirt (also a collector's item), and all I hear is where is my Jaguar t-shirt!!!! The pack in game hasn't been 100% decided. I think it should be Crescent Galaxy, but there are others that are pushing for Cybermorph.

<[Host] ST.LOU> I never got one

Bill Rehbock is among them, and threatened to wrestle me for it. That's good news for Crescent Galaxy. :)

<[Anthony] A.DIPIETRO> Atari out-sourced MultiTOS is there any chance of outsourcing GEM? (not the AES or TOS just the Desktop portion)?

We really didn't outsource MultiTOS, we bought it, and then hired the developer. At this point, I'd say NO...no chance of that happening.

<[Steve @ NLS] STEVE-J> Could you answer my previous question (if the Jaguar's price is definitely set and, if so, what it is)? My NEW questions are: Can you name any Jaguar retailers (in the test markets)? Also, when the Jaguar goes national, will marketing progress from the coasts inward (I live in Portland, OR)?

The price is set, but we're not announcing it tonight. Nor will we name the retailers yet either. As we've stated in the past, virtually every major retailer has expressed interest in carrying the Jaguar.

<[Host] ST.LOU> Bob, if you would like to ship me 100 Jaguars, I will handle the sales on GEnie for you :-) You pick a price!

Re the marketing effort, yes...we will properly support the Jaguar in all of the markets that it will be sold in. That's part of the reason we want to control where it goes to for the roll out, we want to be sure that we properly support it where it is sold.

<[Host] ST.LOU> Jim Thornhill gets the wrap up tonight......

<[JaguarJim] J.THORNHILL> Bob, I have heard that Atari has purchased a 4 ft display section at TRU for the Jaguar, is that true?

<[Host] ST.LOU> Toys R Us..!

Not that I'm aware of, Jim. Sorry.

<[Host] ST.LOU> Well, that brings us to the end of another session and once again I am thrilled that Bob has chosen this service to meet with Atari users each month. The transcripts seem to be more popular than ever and the last edition has been downloaded almost 650 times so far.... Bob, we really appreciate your efforts at the end of a long work week. I have enjoyed this session and surely look forward to our meeting in November.

Thanks for such a wonderful job of moderating tonight Lou.
This time always serves as a reminder of why GEnie is the Number 1 online service for Atari owners world wide. The staff of the Atari RTs have always gone out of their way to serve the needs of the users. As always, I appreciate the opportunity to meet with our customers online in a live setting here on GEnie! Thanks to all for attending tonight!!

89. my st has started freezing randomly. what can it be?

Newsgroup: comp.sys.atari.st

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

alas there's no end to my st woes...

my st has started freeze-crashing randomly. average uptime now is about
4 minutes.

it crashes even when it sits there waiting for input from the keyboard
(i know that because it also crashes in a program of mine)...

it crashes with the desktop sitting there...

it crashes when running a midi sequencer that goes between memory and
midi port like crazy...

when say it crashes i mean it just freezes there. when i try to reboot
it (cold or reset) it does _not_ always reboot. i've had to open the
case and wiggle things around which makes me think it's a loose contact
somewhere.

on there other hand it crashes with _nothing_ perceptibly moving in the
room. a loose contact _would_ have to be produced by some movement would
it not?

sure expansion due to heat generated could be something creating a loose
contact. but in 4 minutes?

does any of this give you any idea? thanks (preferably email)

cheers.
jacob

for additional input here's the history of that poor st:

i've had it since 1986 w/o any problem (but only 512 k)
this summer i've had it upgraded to a newer version of tos and 4 megs.
fiy the works was done by toad computers down in severna park, md

when it started crashing about a week ago i opened the case and first
saw that the work didn't seem to me to be of the very highest quality.

the board carrying the 4 megs is just loose inside the case, there are
a few miles of extra ribbon cable between it and the two points where
it attaches to the mother board (one place is right next to the 68000
the other close to some other chip i haven't identified) and that ribbon
cable is besides twisted like a moebius band. (isn't there ribbon cable
that changes orientation? do you have to use this "twisting" thing
inside a crowded case?) furthermore the new memory board was grounded
to where the television thing is (the thing that allows you to plug

a tv monitor into the atari and used it as a terminal) and so poorly soldered that the ground broke. amusingly enough the atari kept on working (just as intermittently) with _no_ ground... (what the hell is going on?)

>just one 1MB ?

A stock 1040 STE has 4 SIMMs 256 KB each.

It can be upgraded to 2 MB (2 SIMMs 1 MB each) or 4 MB (4x 1 MB).

It can NOT be upgraded to 2.5 MB without having to use special software (and even with that piece of software, you won't be able to run your auto-booting games).

The reason why Atari didn't put in one 1 MB SIMM instead of for 256 KB SIMMs:

The ST is a 16 bit machine, and a SIMM just carries 8 bit. So, SIMMs in STsalways have to appear in couples.

bye, Peter

>hardware. I'd say 1Mb would be tight. better with 4 especially if you
>use a lot
>if images and fonts.

Calamus 1.09 should no longer be available, at least here in Germany, it isn't.

Calamus S _does_ support color and color output, but it can't separate color documents into four color layers for professional color print. And finally it's limited to 600 dpi output and misses a few features of SL.

All three Calamuses are totally unusable on 1 Meg no HD machines. You need 2 MB for the classic Calamus, for use with an SLM printer it's 4 MB.
For S or SL you need AT LEAST 4 MB of RAM and a hard drive.

bye, Peter

That's one thing that anyone currently looking into getting an Atari
ST should understand, is that they are bucking the trend, so it
won't be nearly as easy to get the support or amount of programs
that are available on the IBM or MAC (I'd imagine that the Amiga
folks are in a similar position). What I've found fascinating is that
in the event of all this, they're still around, and still doing
some new stuff (Falcon, SpeedoGDOS, Atariworks, etc). First time in awhile
they made new software. When the ST first came out, it looked like
a viable competitor to the MAC at least - but somebody fumbled the
ball somewhere along the way. This is not to say that the Atari is
not viable in terms of what it can do, but rather it lost a bit of the
edge that it had before. Personally, I'd be wary to be an IBM or MAC
dealer - they get a lot of sales, but with the price wars that
have been going on (remind you of the airline ticket wars? :-) I can't
imagine the profit margin is as high as it once was. Amazing decade
it's been, huh? :-) Between my Atari, and dealing with companies like
Damark, I'm getting kinda used to mail order :-O

>Instead of flaming me for my answer, how about someone else trying to
>answer the question..?

I don't remember your exact reply, but perhaps (and correct me if
I'm wrong) your answer was a little more emotion-evoking than the
question? Too bad there isn't an artificial intelligence that could
figure out if a message were a flame, and to automatically put it in
email (then again, half the messages on the entire internet wouldn't be
posted :-)

>Pick up any local U.S. Telephone book and try to find a dealer selling Atari
>products.

Hmm, Rising Star Computers and Backstage Pass Studios here in
Dayton, both within my driving distance? (sorry, I couldn't resist ;-)

Oh well, the problem with dealing with a company like Atari is that
they are a smaller company (unlike Microsoft, for instance) and as such
are limited by that among other things. At least they're trying to
come out with new things (including the Jaguar). Just be glad you didn't
get a Coleco Adam computer, Bob (nice system, but is Coleco even around
anymore? :-)

Just curious, what resolution are you trying to run these
programs in? And do you have MultiTOS loaded at the time or not?

For something like Uniterm, you might want to try it in one of the
ST compatibility modes (it would probably look a mess in any extended
resolution, like the Nova/Crazydots cards, etc). Ditto on demos like
Omega...

If I recall, I get a funky screen with Uniterm if I run it in
640x400x4 mode (using DOUBLE2)...

Can you be more specific on ConNect and Nethack? (i.e. what do you have
loaded - ACC/Auto prgs, etc).

To play around, I'd try everything out in an ST compatibility mode
(LOW/MED/HIGH) and WITHOUT MultiTOS loaded. And then work from
there...

Have you tried memory testing programs? Some are available via
ftp. I remember one has the archive name ramtest.arc -- I
downloaded it when we had a problem with an ST that got a memory
upgrade. It didn't find the problem, but crashed itself instead.
Fortunately, the people who did the upgrade took care of the
problem, and repaired the computer free of charge.
A colleague of mine could use the ramtest program later on,
though, to prove his Atari had gotten a flaky upgrade from
another company, so I can tell the ramtest thing works in some
cases.

>when it started crashing about a week ago i opened the case and first
>saw that the work didn't seem to me to be of the very highest quality.

That sounds awful indeed. My knowledge about hardware hacking is
limited, but I installed a 2 MB upgrade in my good old 520 ST a
while ago. I glued the board onto a larger chip that was soldered
onto the motherboard. And I seem to remember that the upgrade
boards in our institute's Ataris were installed the same way by
the professionals that did the work.
I don't know what businesses are like in the U.S., but over here,
I would take the computer to the company that did the work and
tell them to fix the problem they caused with their sloppy work.
It may be worth while to give that a try anyway.

>there are
>a few miles of extra ribbon cable between it and the two points where

>is going on?)

When I soldered that upgrade into my 520 and got the machine to recognize it finally, I saw lots of bits and pixels blurring on the screen. I called the vendors and they told me to install an extra ground cable from the memory upgrade board to the motherboard. This cable should be as thick and as short as possible. It seems possible to me that the ground cable that has broken was such an additional ground cable, and that, because it's no longer connected now, your machine has gone flaky.
I was also told to have cables as short as possible, and in fact I had found out before that the blurring I mentioned was reduced when I shortened the cables. Well, all this may or may not have any relevance for your problem -- as I said, I know nothing about soldering and stuff except the things I mentioned and a bit of fiddling with joysticks and walkmen.

Please, what are you arguing about here? Speedo has over 1000 fonts
available... So what if there are "thousands" of type-1 fonts.... How many do
most people need huh? Is there any normal person that requires more than 500
fonts even?? Grow up, 99.99% of all users don't need half of the amount of
fonts available...

Has anyone made any attempt (yet) to connect a Newton to an ST of any
sort ?? If you can connect one to a modem you should be able to
connect it to an ST.....

Just curious......

Welcome to comp.sys.atari.st
============================

This newsgroup is devoted to discussion about 16 and 32 bit Atari micros. At
present that includes the Atari 520ST, 1040ST, Mega ST, STe, STacy, Mega STe,
TT, and Falcon. There are also emulators for the Apple Macintosh and IBM
PC/XT/AT available.

Most of the people who read this newsgroup are technically oriented.
The newsgroup serves as a resource for Atari users ... feel free to
contribute to the discussions.

Associated newsgroups include:
```

comp.binaries.atari.st ! uuencoded binary programs
comp.sys.atari.st.tech ! technical programming/hardware topics

Hints from Emily Postnews
==========

(Thanks to John Henders (jhenders@jonh.wimsey.bc.ca) for this bit of _humor_.)

Emily Postnews Visits comp.sys.atari.st

(Due to popular demand, (well at least one persone asked anyways), Emily has taken time out of her busy schedule to answer a few commonly asked questions specific to c.s.a.st.)

Dear Emily.
Some Amiga user is raving on c.s.a.st about how wonderful
his computer is, and how awful mine is. What should I do?
signed My Computer is NOT a Toy.

Dear My Computer, etc,etc.
Many people's egos are so tied to their possessions, they
have to affirm their existance by raving about the superiority
of their machine to anyone who will listen. You should immediately
flame these people into cinders, using every rumour or misconception
you've ever heard about their brand of computer, as this will cause
lots of posts, and develop into a massive flame war, which is one
of the main reasons most people read c.s.a.st. If this didn't happen
every six months, everybody would unsubscibe to this newsgroups from
boredom.
Or, you could put comp.sys.amiga.advocacy in the Followup to:
line, and any article replying to yours would go to the newsgroup
designed for this discussion.
Or, if your newsreader supports it, you could build a KILL FILE,
which eliminates any post that has the word Amiga in it.

Kill files can be created in rn and trn by hitting the 'K' key.
This will make a kill file based on the article you were reading
at the time. Then control K will put that file in the editor for you
to play with. You use the same regexp commands here that are in rn.
For example. /[Ff]oo/h:j would search all headers of unread articles
for both Foo and foo, and junk them. Check the docs for your newsreader
for further details.

Dear Emily.
I like flame wars, and want to start one of my own, so my name
will be as famous as Richard Covert's.
Signed, Too much Time on My Hands.

Dear Too much time.
Sorry it took so long to reply, but Richard's in my kill file
and someone had to forward your post to me, or I'd never have seen it.

Flame wars are fun. They're the main reason people creted Usenet,
and should be encouraged at every opertunity.
Some of the most common tricks for starting flame wars are as
follows.
1: Post a note in another newsgroup telling all the users there that
they own a piece of junk, and if they had a half a brain, they'd have the
same computer you do, as it's obviously the best.
2: Toss a bit of slander against another computer in a totally
unrelated post. This guarantees a follow up, even if your original
post wasn't of any interest.
3: Create a signature file that has a put down of another computer
in it. This will get flame wars going in threads that have completely
unrelated Subject: lines, thus slipping through all but he most exacting
kill files.
I hope you find these tips handy in creating your next flame war.
And just remember, your computer MUST be the best, after all, it's yours.

:DEV: 93.06.11
How do I become a developer for the Atari ST?
==========

Contact Bill Rehbok, (408)745-2022

[UNITED STATES ONLY. IF YOU LIVE OUTSIDE THE UNITED STATES, CONTACT
YOUR COUNTRY'S ATARI HEADQUARTERS FOR MORE INFORMATION.]

Bill can explain the program to you, and send an information packet if you
desire.

Atari has gone to a 2-tier developer membership. The 'higher quality'
developer support goes to commercial developers, and costs $250. The
'no-hand-holding, no announcement of company future products, no access
to discounted hardware' goes to noncommercial developers, at an initial cost
of $125, plus $50 renewal fee each year.

Both tiers receive the ST/TT Developer Kit and all developers have to fill
in an application form and a non-disclosure agreement. Contact Bill for

more information.

Atari is now selling the developer's kit (or parts of it) seperately. No project-in-development or non-disclosure agreement is necessary.

:ERR: ??.??.??
What does TOS ERROR nn mean?
What do the bombs on my screen mean?
==========

The information below was written, in part, by Darryl May, and posted on GEnie in January (of ????) by John Townsend. The original also appeared in the June 1988 issue of _Current Notes_ (122 N. Johnson Rd., Sterling, VA 22170). It has since found its way to me, and is being posted to comp.sys.atari.st as a service to readers.

Alan Pratt wrote to tell me that the basic information may be correct, but that it cannot be dubbed "official" unless it originates, on paper, from Atari. This makes sense, as electronic communications are easily modified, even accidentally.

Roland Waldi provided information regarding the difference between TOS and GEM return codes which appears to be correct. The tables have been modified to reflect his information.

The following is an unofficial list of the errors that can appear while you are operating your ST computer.

Error description return code alert box #
==========
OK (no error).....0
Fundamental error.....-1
Drive not ready.....-2
Unknown command.....-3
CRC error.....-4
Bad request.....-5
Seek error.....-6

What is Free-Net and how can I get access?
==========

A "Remodeled" Atari S.I.G. Opens

By now many of you have heard of the Cleveland Freenet, or more specifically the Atari S.I.G. on the Cleveland Freenet. For those who haven't, the Cleveland Freenet is an experimental computer system providing free public community telecomputing. Basically, it's a lot like a public library of the future. Many of these systems are popping up all over the country. Don't be surprised if one pops up in your neighborhood in the future.

Recently the Atari SIG has undergone a significant face-lift. All the regular areas are intact including its news sections, user group newsletter, online magazine sections, general as well as specific computer discussion boards (8 bit, 16/32 bit, Lynx, Portfolio), and our weekly Sunday night multi-chat conference.

The conference starts at 8pm EST sharp and is on channel "+Ataricon". What the staff at the Atari SIG has added, has given the Atari SIG the potential to cover all grounds of Atari and its related products.

The most noticeable addition to the Atari SIG is the Programming and Development Forum. This forum is intended to be used by developers, professional programmers, and Atari hackers (the old definition of "hacker") as a means to share ideas, help each other out, and find out the latest technical information on Atari's products. This board is ran by newly acquired SIG Operator, Peter Haller, a professional programmer who is running developer sections on hardware and software development, programming, MIDI applications development, Graphics Design, plus many other sections that can definitely become a programmer and developer's dream come true!

Last, but definitely not least, the Atari SIG has a restructured Product Info and Support Board and a new Special Applications Board. The Support Board includes a vast library of support lists. These lists range anywhere from phone numbers of Atari dealers and producers, to software reviews for 8 bit, 16/32 bit, Lynx, and Portfolio software. To sum it all up this area covers what's out there, who makes it, and how to get it for all Atari products. The Special Applications Board is just starting out. Currently there is an area for users of MIDI on the ST. MIDI users are encouraged to use this as a means to discuss MIDI related topics. This section is expected to expand in the future.

Accessing the Atari SIG has never been easier. One can access it via Internet by telenet'ing to 129.22.8.75 or "Freenet-in-b.cwru.edu" or by calling (216) 368-3888 300/1200/2400 bps. Once on the system, a user can apply for an account application and logon as a visitor. Once here, simply type "Go Atari" to get to the Atari SIG. A visitor can go anywhere on the Freenet and can read anything. They can't

post messages until they get their permanent accounts, however.

For additional information on obtaining access to Freenet write to
myself via the e-mail addresses above or by writing the SIG at its US
mail address:
The Atari SIG
P.O. Box 21815
Cleveland, OH 44121 USA

Lastly, a freenet application is available in the mail by writing a
request to the above address if you rather not download it from Freenet.

The Atari SIG is ready to serve the thousands of Atarians throughout
the world. We look forward to seeing you all real soon! Remember the
staff of the Atari SIG are volunteering their time for no pay and the
Cleveland Freenet, as well as the Atari S.I.G., is a non-profit organization
existing for the free exchange of information.

What magazines are available for the Atari ST?
==========

If you've got updates, mini-reviews,
or more information on other magazines, please send them to me via e-mail.

As always, WRITE to a company before sending them money for a subscription.

US mags:

AtariUser, published by Quill Publishing Company

Cover Price: US $1.00 Canada $1.45 UK 1.50 (AtariUser is available for free
[$6.00/50 magazine shipping charge] from participating computer dealers,
bookstores & user groups!)

Subcription Rate: $21.30 US Bulkrate, $41.30 US First Class.
Address: AtariUser, 113 W. College Street, Covina, CA 91723 USA

Current Notes, published by Current Notes Inc.

Cover Price: US $3.95

Subscription Rate: $27.00/year (Atari clubs registered with Current Notes may
subscribe at $23.00/year) US, $35.00/year (Canadian club members at $31/year)
Canadian, Foreign rate $44/year.

Address: Current Notes Inc., 122 N. Johnson Rd., Sterling, VA 22170 USA

Atari Interface:

Write for a free sample copy of the Atari Interface magazine
(Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108)

AIM is soon to be available in Canada, Europe and Mexico, and should be in all local WaldenSoftware stores and many bookstores. If your "local" Atari dealer doesn't have it, he should be able to get it for you...

UK Mags:
(Thanks to Sam Marshall <samm@castle.edinburgh.ac.uk> and Kevin Busby <kevinb@syma.sussex.ac.uk> for some of the info here.)

ST Applications:
---

formerly the ST Club Newsletter, this is now the only non-games mag in the UK (although see ST World below). Approx. 4,500 copies per issue sold. News, reviews, interviews, tech tips, general forum, programmers' forum, PD catalogue. DTP'd on an ST. Retains a 'user-driven' feel. Recommended. The associated ST Club runs a PD distribution service and distributes a couple of commercial programs too (Fontkit Plus, UIS III, Molgraph, CRL Virus Killer, etc.).

12 issue Subscription now:
With Disk 6 Mags Without Disk Mags

UK: #26.50 #18.00
Europe (air) #30.50 #21.00
World (air) #38.50 #31.00

Address: ST Club, 2 Broadway, Nottingham, NG7 1PS, UK.

ST World:
---

formerly the leading UK non-games mag. Became a quarterly 'buyer's guide' in Autumn 90.

ST Format:
---

all-purpose 150-page monthly, mainly aimed at young people. Lively, but of uneven quality. Big leisure section, but other areas covered too. Includes cover disk - mix of games demos and (usually out of date) PD utilities. Probably the biggest-selling UK ST mag. Has had several public rows with Atari UK.

Future Publishing, Somerton, Somerset, TA11 6TB Tel. 0458 74011
Fax 0458 74378

Atari ST User:
---

like ST Format. Generally (amongst online users) thought
to be not quite as good.

ST Action:
---

games, games and more games. And games.

Atari ST Review:

Lots of info, more mature editorial style than Format, but not so
polished. 1 cover disk per issue.

Subscriptions: PO Box 500, Leicester, LE99 0AA. Tel: 0858 410510.

There are also, I think, some MIDI mags with strong ST content. I don't
have their names.

German Mags:

ST-Magazin, TOS, and ST-Computer united in August 1993 to the
"ST Computer", which is the only remaining magazine in Germany.
(I don't know if the following info still holds, then. --Steven)

ST Computer:
---
11 issues/year, typical around 180 pages
Subscription: DM 80 (domestic), DM 100 (normal mail), DM 130 (air mail)
Address: Heim Verlag, Heidelberger Landstr. 194, D-6100 Darmstadt 13 GERMANY

French Mags:

ST Magazine

Monthly in French. Oriented towards developers, professional users. Comes
with a disk each month.
ST Magazine - 10, rue Hegesippe Moreau - 75018 Paris - France
(French Teletel users: 3615 Teletel access, code STMAG)

STart Micro

Monthly, includes a cover disk. 11 issues per year. 64 + 16 (separated) pages.
Price: FF38 per issue, subscription: FF360. Subjects: Desktop publishing,
graphics, initiations to C and GFA Basic, survey of outcoming software, music,
folders. Minitel access: 3615 code ATARI. Address: FC Press, 57 rue Danton,
92300 Levallois-Perret, France.

Dutch Mags

ST, published by Stichting ST , postbus 11129 2301 EC Leiden the Netherlands
---
cover price: fl 6,95
Independent magazine by and for atari ST users.
covers all different topics from applications to games and hardware.

60 pages.

6 times a year. One year subscription fl 35,-
black and white pages.

Atacom, by Atari Club Groningen.

Never seen this one. I suppose you have to be a member of the club or so.
price is fl 4,95.
Adress of the club: Atari Club Groningen, Postbus 9164
9703 LD Groningen, the Netherlands.

Atari Nieuws, by Atari ST computer club Nederland

News paper sized publication. Lots of colour on newspaper pages. Not too many
pages though.
price is fl 3,95 (cheap cheap)
monthly publication.
adress: ACN, Postbus 5011, 2000 CA Haarlem, the Netherlands.

GFA-info, by GFA gg (usergroup)

Publication of the GFA-basic usergroup. This group has a lot of mainly
educational software available.
price is fl 5,00

adress: GFA gg, Frankrijklaan 14, 2034 BA Haarlem, the Netherlands

ST News, by Stichting Computers Eindhoven

This is an electronic magazine. It has been around for about 6 years now
and is completely in English!!! The first issues were in Wordplus format
back in 1986 but from the 6th issue on it included a readerprogram
both for color and monochrome. Even with music.
price is fl 10,00
adress: S.C.E., Kornoeljelaan 22, 5552 RC Valkenswaard

Swiss mags:

Atari ST News Schweiz

Dutch Atari ST Nieuws translated into German for the Swiss :-)

:TIPS: 93.06.11
TIPS AND HINTS from other users
==============================

Any 'multisync' monitor which handles 70 video fields a second can be used
with the ST; the custom cable involves no tricks, or commercial ones are
available. The original NEC multisync does NOT handle 70 fields a sec.

More than 3 bombs often means more than 1 error, so interpretations are
tricky.

An ST-formatted disk which is not readable by a PC can be made readable by putting the 3 bytes EB 34 90 (those were 3 bytes of hex) at the beginning of the boot sector (sector 1 of track 0). This can be done with either an ST or PC absolute sector editor. The Desktop of TOS 1.4 and higher does this automatically.

Some (older) PC-3.5"-drives cannot deal with the short track-header produced by ST formatters. On those drives, ST-formatted disks are not readable, independent of their boot sector contents. The other way, however, does always work: format on the PC.

When using disks formatted on a PC in an ST, make sure to insert and access a disk with a different serial number in between disk changes.

For those with the 'inaccessible' mouse and joystick ports, a joystick extender cable will make life easier. The Y-cable joystick extenders make it extremely easy to keep mouse and joystick connected to port 0, and a joystick extender cable in port 1 makes for easy hookup after you've moved the machine.

BARREL is a program which can redirect printer-data to a file. It comes in handy when your printer is unavailable, and the program does not already have an option to 'print-to-a-file'. (It is available on the atari.archive server.)

DBLEFEAT is a program which can redirect disk access from, say, drive A to drive B. Handy when a program 'hard-codes' the data drive, and you wish to use your hard drive instead. (It is available on the atari.archive server.)

On the Desktop, holding the right mouse button allows you to manipulate files in other windows. This is useful for a number of reasons. An example is this: say D:\BLAH.ARC is a file you would like to extract to D:\, but ARC.TTP is on C:\. Top D:\'s window, then hold the right button while double-clicking ARC.TTP in an inactive window.

:ZNET: ??.??.??
Where can I get copies of ZNET?
==========

ZNET is now Atari Explorer Online. Please see EXPLOR for more info.

:EXPLOR: ??.??.??
Where can I get copies of Atari Explorer Online?
==========
Atari Explorer Online magazine is available on CompuServe and GEnie. You can also get copies mailed to you by sending an e-mail message to

stzmagazine-request@virginia.edu

indicating you wish to subscribe.

They won't get to you on Friday (which is when they're posted), but Greg Lindahl provides an excellent service to the networking community by sending these out.

Atari Explorer Online and some information from the Current Notes user
magazine are also available from the atari.archive server under
/atari/magazines.

:PD: 93.06.11
Where can I get Public Domain/Shareware software?
==========

There are FTP sources and a comp.sources.atari.st/comp.binaries.atari.st
mail server. You can also try the commercial on-line services such as
GEnie, CompuServe, Delphi and Bix.

Using FTP, most files should be retrieved in BINARY format (at least those
ending with the suffix of .ZIP, .ARC, .LZH, .ZOO, .PRG, .TTP, .TOS)

Mail servers encode files. You will need a program called 'uudecode' in
order to change files ending with the suffix .UUE (or .UAB, .UAC, etc.)
into their original form.

:MAIL: ??.??.??
E-Mail file servers

archive-server@spud.hyperion.com:

Spud holds all of the comp.sources.atari.st / comp.binaries.atari.st
postings. If you aren't reading these two newsgroups, you should consider
doing so. You may obtain uuencoded files as e-mail. You can obtain a
help file by mailing a message to archive-server@spud.hyperion.com, with
the main body of the message being the word 'help'.

atari@atari.archive.umich.edu:

The atari.archive server is mentioned many times in this article. It contains
a multitude of Atari ST PD and shareware programs. If you don't have access
via FTP you can obtain many of the files via e-mail. You should first obtain a
help file by mailing a message to atari@atari.archive.umich.edu, with the main
body of the message being the word 'help.'. If you are from a uucp site,
please enclose this statement also 'path host1!host2!....', where
host1!host2!... is your path. Please read the help file completely before you
ask questions, and then send any you may have to jon@atari.archive.umich.edu.
Any questions about the archive or specific files go to
weiner@atari.archive.umich.edu (or weiner@terminator.rs.itd.umich.edu,
jeff.weiner@um.cc.umich.edu, weiner@zircon.labmed.umn.edu, or
weiner@umnstat.stat.umn.edu :-)

archive-server@micros.hensa.uk.ac:

This is a UK public domain archive, available to sites within the UK via
via JANET.

info-server@Germany.EU.net:

This is a german public domain archive. This only has comp.binaries.atari.st
and comp.sources.atari.st.

archive-server@Germany.EU.net:

Same place as above, but this one carries other software than just
comp.binaries.atari.st and comp.sources.atari.st.

mail-server@cs.ruu.nl (or uunet!mcsun!hp4nl!ruuinf!mail-server):
---
send the following message

begin
path john@highbrow.edu (PLEASE SUBSTITUTE *YOUR* ADDRESS)
send ATARI-ST/index
end

NOTE: *** PLEASE USE VALID INTERNET ADDRESSES IF POSSIBLE. DO NOT USE
ADDRESSES WITH ! and @ MIXED !!!! BITNETTERS USE USER@HOST.BITNET ***

The path command can be deleted if we receive a valid from address in your
message. If this is the first time you use our mail server, we suggest you
first issue the request:
send HELP

LISTSERV@UOGUELPH.BITNET:

Mail messages with the contents HELP will bring you some usage information
and GET PROG-A16 FILELIST will provide you with a list of files. Subscriptions
to INFO-A16 are also available on this server. INFO-A16 is a digest of
messages from comp.sys.atari.st.

:FTP: 93.05.05
Anonymous FTP servers

Note: The generally accepted practice for FTP use is as follows:

1. Limit access times to non-working hours. This is usually 6-8 pm
to 8-9 am LOCAL time. LOCAL time means local to the computer
you are accessing! For example, 4 P.M. in Minneapolis, Minnesota
is 10 P.M. in England, and 10 A.M. in Germany is 4 A.M. in New
York.

2. Once you connect, issue the following commands at your FTP
prompt:

user anonymous
<YOUR e-mail address should be entered at the Password: prompt)
ls
cd <to the appropriate directory>

3. Limit downloads, especially across the ocean. Remember, there are
other people who are using the same lines as you.

Atari FTP sites (the list is -not- exhaustive)
---

atari.archive.umich.edu [141.211.164.8]

uk.ac.lancs.pdsoft (available to UK users via JANET)

Note: Access is a bit different for this archive site, use the following:

user pdsoft
pdsoft (at the Password prompt)

ftp.Germany.EU.net [192.76.144.75]

ftp.cs.ruu.nl [131.211.80.17]

src.doc.ic.ac.uk

This site has a mirror of atari.archive.umich.edu in /computing/systems/
atari/umich.

:COMP: 93.10.02
Atari-related companies
==========

This is a (still under construction) list of companies and addresses that
might be of use to Atari ST users. Please send me addresses for the blank ones
on this list. See also IAAD, it lists many more companies that are not on
this list.

Archive-name: csas-faq/part2

Welcome to comp.sys.atari.st! Please read this FAQ before posting a question
to comp.sys.atari.st, since a lot of common questions are answered here.

Thanks to David Paschall-Zimbel (davidli@simvax.labmed.umn.edu) for
compiling most of this FAQ.

Entries are dated by the last change. ??.??.?? means they were last changed
before the dates were added.

The following is an index of the questions answered in this part of the FAQ.
For easy access to a particular question, search for the tag surrounded by
colons (i. e. :GNU:). Questions marked with '*' are new or changed.

:WEL: 93.06.11
Welcome to comp.sys.atari.st
============================

This newsgroup is devoted to discussion about 16 and 32 bit Atari micros. At
present that includes the Atari 520ST, 1040ST, Mega ST, STe, STacy, Mega STe,
TT, and Falcon. There are also emulators for the Apple Macintosh and IBM
PC/XT/AT available.

Most of the people who read this newsgroup are technically oriented.
The newsgroup serves as a resource for Atari users ... feel free to
contribute to the discussions.
```

Associated newsgroups include:

comp.binaries.atari.st ! uuencoded binary programs
comp.sys.atari.st.tech ! technical programming/hardware topics
comp.sources.atari.st ! uuencoded/shar sources

:ARCS: 93.06.11
How do I deal with Archived files (.ZOO, .ARC, .LZH)?
==========

Files ending with suffixes .ZOO, .ARC, .ZIP and .LZH are archive files. They are binary files which may contain one or more other files in a compressed format. Archive files usually take up less disk space, and for this reason have become quite popular for transferring large files via modem.

In order to extract the files from an archive file, one must use an archive program. Here are the correspondences:

ZIP Use UNZIP.TTP or STZIP.PRG
ARC Use ARC.TTP
LZH Use LHARC.TTP
ZOO Use ZOO.TTP

A few hints for first-time users:

* Most archivers will give a short summary of commands if invoked with no arguments.
* If in doubt, to extract a file, copy the archiver to the directory that the file is in, and run the archiver with the arguments 'x [filename]'.
* If you have TOS 1.4 or higher, and/or a CLI, you can avoid copying the archiver by just changing the current directory to where the file is. See TIPS for a tip on how to do this from the desktop on TOS 1.4 or higher.
* Read the documentation for the archivers you use, they will almost certainly answer all your questions. Documentation is usually included in both the source and binary distributions (such as zoo21bin.zoo).

ARCHIVERS
These programs are all available via FTP from the atari.archive server, in the /atari/archivers directory. Recommended files are:

arc602.ttp - version 6.02 of ARC, includes features to archive subdirectories and also include comments with files.

arc602.arc - contains documentation. UnArc using arc602.ttp.

arc521e.arc - older version of ARC. Used mostly by those who want speed, better compression, and don't care about archiving subdirectories. UnArc using arc602.ttp.

lharc.ttp - version 2.0 of LHARC.

lzh201i.lzh - Thomas Questors lzh utility. German documentation. UnArc using lharc.ttp

stzip22.lzh - STZip, with GUI interface

unzip41.lzh - Old version of unzip

zoo21.ttp - version 2.1 of ZOO

zoo21bin.zoo - ZOO archive includes documentation. UnArc using
zoo21.ttp.

:MSA: 93.06.11
Some info on Magic Shadow Archiver
==================================
(This was provided by Chris Herborth)

MSA Archives

The Magic Shadow Archiver (MSA) is a disk archiving program that allows an entire disk to be compressed into one file for transmission. The Magic Shadow Archiver (in shadow.[arc?|lzh?|zoo?] on atari.archive.umich.edu in ~/Archivers) creates .MSA files, which are often compressed using a normal archiver, such as zoo or lharc.

Magic Shadow is notoriously bad when used on a 1/2 meg ST and only one floppy drive. Its disk access and memory use are very badly thought out, and could result in over 160 disk swaps when unpacking an 80 track, double-sided disk.

Due to the fact that it was the _only_ disk image archiver around for quite a long time, Magic Shadow is the de-facto standard for creating disk images of computer demos and other pieces of software that cannot be easily compressed as files.

Because MSA files are disk images, they can only be used to recreate a floppy disk. There is (currently, see below) no way to extract the files from an MSA archive without writing it to a floppy disk.

Magic Shadow works perfectly with any legal TOS floppy format, even high density disks found in modified STs and most MegaSTes and TTs.

Chris Herborth (herborth@pinot.waterloo.ncr.com at work,
cherborth@semprini.tdkcs.waterloo.on.ca at home,
C.HERBORTH on GEnie) is writing a much more efficient MSA extractor, called UnMSA. UnMSA will minimize the number of disk swaps, and speed decompression considerably.

Daryl Richards (no email address, yet) is working on an MSA-Mounter, which will allow someone to unpack an MSA archive to RAM or a file on a hard disk. This uncompressed disk image will then be added to the system as a logical drive (much the same way a RAMdisk adds a drive to the system). MountImage on the Mac is an example of the way MSA-Mounter will eventually work (MountImage is so good, you can install new versions of the Mac OS using floppy disk images stored on your hard drive).

There is yet another MSA archiver now, called MSA II, by Phillip Lang.

:CLI: ??.??.??
What Command Line Interpreters are available?
==========

There are a large number of Command Line Interpreters for the Atari ST.
Some of the more popular ones include:

gulam the 'classic' cli, somewhat UNIX in flavor

BASH GNU Bourne Again Shell

ksh Korn Shell - available under MINT

gemini MUPFEL is the shell used by the gemini environment

master MS-DOS/Unix mixture, shareware.

okami a German shell with many useful utilities built in

pcommand an MS-DOS-like shell

csh C-shell, standard on Unix

tcsh Enchanced C-shell - available under MiNT

Check atari.archive under /atari/cli or /atari/mint, or check one of the
other FTP sites for files.

:ERR: ??.??.??
What does TOS ERROR nn mean?
What do the bombs on my screen mean?
==========

The information below was written, in part, by Darryl May, and posted on
GEnie in January (of ????) by John Townsend. The original also appeared in
the June 1988 issue of _Current Notes_ (122 N. Johnson Rd., Sterling, VA
22170). It has since found its way to me, and is being posted to
comp.sys.atari.st as a service to readers.

Alan Pratt wrote to tell me that the basic information may be correct, but
that it cannot be dubbed "official" unless it originates, on paper, from
Atari. This makes sense, as electronic communications are easily
modified, even accidentally.

Roland Waldi provided information regarding the difference between TOS and
GEM return codes which appears to be correct. The tables have been modified
to reflect his information.

The following is an unofficial list of the errors that can appear
while you are operating your ST computer.

Error description return code alert box #
==========
OK (no error).....0
Fundamental error.....-1
Drive not ready.....-2
Unknown command.....-3

```
CRC error.....................-4
Bad request...................-5
Seek error....................-6
Unknown media.................-7
Sector not found..............-8
No paper......................-9
Write fault..................-10
Read fault...................-11
General error................-12
Write protect................-13
Media change................-14
Unknown device..............-15
Bad sectors on format.......-16
Insert other disk............-17
Invalid function number.....-32.....1
File not found..............-33.....2
Path not found..............-34.....3
No handles left.............-35.....4
Access denied...............-36.....5
Invalid handle..............-37.....6
Insufficient memory.........-39.....8
Invalid memory block address...-40.....9
Invalid drive specified.....-46....15

No more files...............-49....18
Range error.................-64....33
Internal error..............-65....34
Invalid program load format....-66....35

The last code is the infamous "TOS error 35"!

Also, some unofficial information via Alan Pratt:

Notably, you should add -48: ENSAME (not the same drive, occurs when
you call Frename and the two names you give aren't on the same drive),
and -67: EGSBF: you can't use Mshrink to GROW a block of memory.

Those bombs that appear on your screen are error messages from
the 68000 micro-processor.

Number
Description of bombs

Trap Instruction Vectors.....32-47
[unassigned, reserved].......48-63
User Interrupt Vectors......64-255
```

:GDOS: 93.05.05
What is GDOS, and where can I get it?
==========

GDOS stands for Graphic Device Output System (at least that's what my copy of STart, volume 1 number 1 said...)

There is a newer version, called SpeedoGDOS, which should be available commercially from Atari. It is currently included with AtariWorks, and some Falcon packages. SpeedoGDOS uses scaleable fonts - you do not need to create a font file for every point size. There are desk accessories which allow you to manipulate available fonts, and also CPX programs for the newer Atari Control Panel. For those who only have limited memory, a newer version of GDOS is also included with the distribution. For those with investments in older bit-mapped GDOS fonts, they may be used with the new version of GDOS or used as bit-mapped (ie. non-scaleable) fonts within SpeedoGDOS.

You can get a copy of "Everything You Ever Wanted to Know About GDOS (and more)" by Douglas N. Wheeler from the atari.archive server. The file is /atari/programming/gdos.arc.

There is a German version of GDOS available from the atari.archive server. The file is /atari/utilities/amcgdos.arc.

Currently, there are no truly public domain sources for the GDOS system files or font files (at least those supplied by Atari). You can get these files with many commercial programs, such as Degas Elite, WordFlair, etc. You might also want to check your local user group to see if they received a copy of the WordFlair demo program (also available on GEnie). The demo program appears to have the GDOS system and font files.

In the UK The ST Club (2 Broadway, Nottingham, UK NG1 1PS. Tel 0602 410241, Fax 0602 241515) is a licensed GDOS distrubutor:

Catalogue No's:
GDOS-A Driver + Fonts 9-pin
GDOS-B Driver + Fonts 24-pin
GDOS-C Installed system for Opus (9 pin)
GDOS-D Opus 24-pin
GDOS-E FontGDOS + drivers
GDOS-F 300dpi printer fonts

Disks 2.95 pounds each.

:GNU: 93.06.11
What GNU software is available for the ST?
==========

The Free Software Foundation C compiler, commonly known as GNU C (or gcc) is avaiable for the Atari ST. The minimal memory required to do any useful (i.e. beyond 'hello world') programming is 2 megabytes. A 4 megabyte system is recommended.

There is an extensive archive of the latest GNU C programs via anonymous FTP on atari.archive. GNU C is also available at most European FTP sites. The latest version of GCC available for the ST is 2.4.2, this version includes built-in support for C++.

Note that most GNU documentation comes in TeXinfo format. Documentation in this format can be fed into TeX for printing. It can also be processed by Emacs' texinfo to make an info file, which can be viewed on-screen with Emacs' info mode. These two functions can also be performed by the standalone programs 'texinfo' and 'info' (on atari.archive as /atari/tex/tnxf241b.zoo).

The following can be found in the /atari/gnustuff/tos directory of atari.archive: (Note: all of these have Unixmode and MiNT support)

BASH Bourne-again shell
BISON Yet another YACC (Yet Another Compiler Compiler)
COMPRESS Compatible with Unix compress
DIFF Compares files; PATCH does the inverse
EMACS Extreme editor :-)
Fileutils Unix file utilities
FLEX Lexical analyzer, like Unix lex
GAWK AWK report generation language
GCC 2.4.2 C, C++ compiler
GDB GNU debugger, with source level C support
Ghostscript Postscript clone
GROFF Text formatting system
GREP Regular expression search, like Unix grep
MAKE Like Unix make
MAKEINFO Stand-alone system to process .info files
PATCH Changes files from diffs; DIFF does the inverse
PROF Profiles executable code
RCS Revision Control System

SED Stream editor
Smalltalk Smalltalk; object oriented language
TAR Tape archiver like Unix tar

:HAM: ??.??.??
Where can I find Ham Radio software for the ST?
==========

Plenty of Ham Radio software is available for the Atari ST:

Morse code
Radio Teletype (RTTY)
Packet Radio (W0RLI BBS and K9AQ TCP/IP)
Satellite Tracking
WEFAX
Color Slow Scan TV (SSTV)
etc.

For more information contact the Atari Microcomputer Network:

Newsletter Editor - Gil Frederick, VE4AG
130 Maureen Street
Winnipeg, Manitoba
R3K 1M2 Canada
or
Program Librarian - John Adams, KC5FW
17106 Happy Hollow
San Antonio, TX 78232
U.S.A.
or
Tune into the weekly net Sundays 16:00 UTC on 14.325 MHz.

73,
John Langner, WB2OSZ

:LANG: ??.??.??
Public Domain/Shareware languages...
==========

There are a large number of programming languages available for use with the
Atari ST. Programmers seem to flock to the Atari ST, and if you know of a
language, you can probably find it, or an equivalent, for the ST.

68000 assembler/disassembler
abc
APL
AWK
BASIC
C
C++
cross assemblers (z80, 6502, 68xx,8031/80xx)
Elan
FORTRAN

FORTH
FP
Hope
ICON
LISP
Little Smalltalk
Modula2
OPS5
perl
PROLOG
SCHEME
SIOD
Smalltalk
XLisp
XProlog
XScheme

Check the atari.archive server under /atari/languages. Most other archive sites will have a language directory which you can also check.

:MINIX: ??.??.??
Is MINIX available on the Atari ST?
==========

MINIX is a UNIX-like operating system for the IBM PC, XT, AT, 386, and PS/2, as well as the Apple Macintosh, Commodore Amiga, Atari ST, and later in 1991, Sun SPARC. It is available with all the source code for the entire operating system, the libraries, and nearly 200 UNIX-like utilities.

Demonstration disks for the IBM PC line and Atari ST are available for free via anonymous FTP for people on the Internet. A Macintosh version will be online soon. (If you can't wait, see below.)

To get a free demo disk and the manual, use ftp to connect to ftp.cs.vu.nl (192.31.231.42) and look in pub/minix/demo. The READ_ME file describes the contents of the directory and how to use it. Be sure to fetch and read this first. It contains important information.

If you don't have FTP access, you can buy the demo disk package from Prentice-Hall for $10 by calling (201) 767-5969 or FAX (201) 767-5625. Please DON'T ask me to send it by email. I have quite enough work already thank you. The ordering numbers for Prentice-Hall are:

- MINIX 1.5 IBM demo disk (0-13-582768-x) (in stock now)
- MINIX 1.5 Atari demo disk (0-13-582792-2) (in stock now)
- MINIX 1.5 Macintosh demo disk (0-13-582784-1) (in stock now)

Please note that although the demo disks are available for free on line, MINIX itself is copyrighted software and is not available on line. The demo disks are also copyrighted, but permission is hereby granted to upload and use them for evaluation purposes. The READ_ME file tells how MINIX can be ordered.

AS A COURTESY TO US, PLEASE DO NOT FTP DURING BUSINESS HOURS (EUROPEAN
TIME). PLEASE FTP AFTER 11 A.M. EASTERN STANDARD TIME.
If you want to follow the MINIX discussion, read the comp.os.minix
newsgroup, which is quite active and has almost 50,000 subscribers.

Have fun!

Andy Tanenbaum (ast@cs.vu.nl)

:MINT: ??.??.??
What is MiNT?
=============
MiNT is a free multitasking operating system extension for TOS. It is somewhat
like BSD Unix from the programmer's perspective. MiNT can run up to 1 GEM
program along with a lot of character-based programs simultaneously. MGR
and MW2 can both put multiple terminal windows on screen, and bgacc can
put a number of terminal windows on a GEM screen. MiNT and lots of stuff to go
with it can be found at atari.archive.umich.edu:/atari/mint.

TOSWIN is the new replacement for bgacc: it provides lots of nice features like
variable fonts, menus, selectable window gadgets, etc. GEMTERM is a similar
package (it's not part of the standard MiNT distribution) modelled after TOSWIN
and XTerm.

A somewhat interesting note: MiNT is now the kernel of Atari's multitasking
OS, MultiTOS. Originially MiNT stood for 'MiNT is Not TOS', but it's now
'MiNT is Now TOS'. :-)

:XWIN: 93.03.01
Is there a version of XWindows for the ST?
==

There actually is a port of XWindows to the ST now, although it is pricey.
Here's the (slightly hacked up) announcement for it:

X/TOS/window/server and X/TOS/window/server/color

Vendor:
X/software Michael Gehret
X/TOS division
Marktstrasse 8
W-8944 Groenenbach
Germany
TEL: +49 8334 1411
FAX: +49 8334 6245
email: xtosinfo@xsoft.uucp
CPU:
Atari Mega ST, STE, TT
68000 to 68040
Memory:
2 Mbytes (4 Mbytes recommended)
Operating System:
TOS 1.4 or higher
Mouse:

Atari mouse
Graphics:
X/TOS/window/server:
monochrome 640x400x1,
monochrome 1280x960x1 (TT, SM194)
X/TOS/window/server/color:
monochrome 640x400x1,
monochrome 1280x960x1 (TT, SM194)
color 320x200x4
color 640x200x2
color 640x480x4
color 320x480x8
Ethernet Card:
Atari Card (Mega or VME bus)
Riebl/Wacker (Mega or VME bus)
Biodata BioNet 100 II (DMA port or VME bus)
Network Software:
Atari/Riebl/Wacker ANS TCP/IP
Biodata TCP/IP
Disk Space:
none (two floppy disks, may load fonts from second disk or font server)
Features:
full X11 Release 5 implementation
Shape, Multi-Buffering, MIT-SUNDRY-NONSTANDARD extensions
PEX extension optional
support of font server protocol
support of X Display Manager Protocol
access control support
compatible to OSF/Motif and OpenLook
high performance (more than 32,000 Xstones on TT)
fast cursor tracking
backing store and save unders support
size of virtual screen limited by memory only, automatic panning
X/TOS/window/server/color supports all video modes at the same time,
including dynamic visuals
loadable key maps (xmodmap format), full support for European keyboard
layouts
3-button mouse emulation with Atari 2-button mouse
may run parallel to GEM (switching with hot key), configurable multi
tasking priorities
about 50 fonts supplied

:DEMOS: ??.??.??
Why won't demo x run on my machine?
==========

90% of the time, if a demo does not run on your American ST, you probably
need to be in 50Hz mode to use it. Get a program like 50hzboot.prg from
atari.archive to allow this.

:PAINT: ??.??.??
What is the format for [x] paint program data?
==========

There is a periodic posting of ST Picture Formats, edited by David Baggett.
The file is on the atari.archive server under /atari/graphics/picfmts.doc.

:PD: 93.06.11
Where can I get Public Domain/Shareware software?
==========

There are FTP sources and a comp.sources.atari.st/comp.binaries.atari.st
mail server. You can also try the commercial on-line services such as
GEnie, CompuServe, Delphi and Bix.

Using FTP, most files should be retrieved in BINARY format (at least those
ending with the suffix of .ZIP, .ARC, .LZH, .ZOO, .PRG, .TTP, .TOS)

Mail servers encode files. You will need a program called 'uudecode' in
order to change files ending with the suffix .UUE (or .UAB, .UAC, etc.)
into their original form.

:MAIL: ??.??.??
E-Mail file servers

archive-server@spud.hyperion.com:

Spud holds all of the comp.sources.atari.st / comp.binaries.atari.st
postings. If you aren't reading these two newsgroups, you should consider
doing so. You may obtain uuencoded files as e-mail. You can obtain a
help file by mailing a message to archive-server@spud.hyperion.com, with
the main body of the message being the word 'help'.

atari@atari.archive.umich.edu:

The atari.archive server is mentioned many times in this article. It contains
a multitude of Atari ST PD and shareware programs. If you don't have access
via FTP you can obtain many of the files via e-mail. You should first obtain a
help file by mailing a message to atari@atari.archive.umich.edu, with the main
body of the message being the word 'help.'. If you are from a uucp site,
please enclose this statement also 'path host1!host2!....', where
host1!host2!... is your path. Please read the help file completely before you
ask questions, and then send any you may have to jon@atari.archive.umich.edu.
Any questions about the archive or specific files go to
weiner@atari.archive.umich.edu (or weiner@terminator.rs.itd.umich.edu,
jeff.weiner@um.cc.umich.edu, weiner@zircon.labmed.umn.edu, or
weiner@umnstat.stat.umn.edu :-)

archive-server@micros.hensa.uk.ac:

This is a UK public domain archive, available to sites within the UK via
via JANET.

info-server@Germany.EU.net:

This is a german public domain archive. This only has comp.binaries.atari.st
and comp.sources.atari.st.

archive-server@Germany.EU.net:

Same place as above, but this one carries other software than just
comp.binaries.atari.st and comp.sources.atari.st.

mail-server@cs.ruu.nl (or uunet!mcsun!hp4nl!ruuinf!mail-server):
---
send the following message

```
begin
path john@highbrow.edu (PLEASE SUBSTITUTE *YOUR* ADDRESS)
send ATARI-ST/index
end
```

NOTE: *** PLEASE USE VALID INTERNET ADDRESSES IF POSSIBLE. DO NOT USE
ADDRESSES WITH ! and @ MIXED !!!! BITNETTERS USE USER@HOST.BITNET ***

The path command can be deleted if we receive a valid from address in your
message. If this is the first time you use our mail server, we suggest you
first issue the request:
send HELP

LISTSERV@UOGUELPH.BITNET:

Mail messages with the contents HELP will bring you some usage information
and GET PROG-A16 FILELIST will provide you with a list of files. Subscriptions
to INFO-A16 are also available on this server. INFO-A16 is a digest of
messages from comp.sys.atari.st.

:FTP: 93.05.05
Anonymous FTP servers

Note: The generally accepted practice for FTP use is as follows:

1. Limit access times to non-working hours. This is usually 6-8 pm
to 8-9 am LOCAL time. LOCAL time means local to the computer
you are accessing! For example, 4 P.M. in Minneapolis, Minnesota
is 10 P.M. in England, and 10 A.M. in Germany is 4 A.M. in New
York.

2. Once you connect, issue the following commands at your FTP
prompt:

```
user anonymous
<YOUR e-mail address should be entered at the Password: prompt)
ls
cd <to the appropriate directory>
```

3. Limit downloads, especially across the ocean. Remember, there are
other people who are using the same lines as you.

atari/umich.

:TEX: ??.??.??
Is TeX/LaTeX available on the Atari ST?
==========

The TeX/LaTeX typesetting programs are available on the Atari ST. Check the
atari.archive server under /atari/tex. Fonts and device drivers
(including one for the Epson 9-pin printers) are available on the
atari.archive server.

The latest version of TeX (3.14) has recently been made available on the
atari.archive server. The files are in a subdirectory of their own.

Graham Higgins recently wrote a message in comp.sys.atari.st indicating the
minimum files needed to get a working TeX/LaTeX system up and running on the
Atari ST. He said:

You'll need, at minimum:

The binaries for LaTeX/TeX :StTeXBin
The style files :StTeXSty
The font macros :StTeXTfm

If you want to screen-preview, you'll need screen font files (showdvi)
If you want to print locally, you'll need printer font files (dvifont)

Allow 5Mb.

For a step-by-step article on setting up Tex and LaTeX, send an e-mail request
to davidli@simvax.labmed.umn.edu. Be sure to mention 'tex.setup'.

There is also a complete, ready-to-install distribution called CS-TeX. The
latest version, 4.0, is available at atari.archive: /atari/tex/cs-tex-4.0.
This consists of 8 disks full of TeX stuff, plus an installation program

that takes care of the details for you.

==========
Hope you liked the comp.sys.atari.st FAQ. If you have comments,
suggestions, more material, etc., mail me at sourada@iastate.edu

Thanks to David Paschall-Zimbel (davidli@simvax.labmed.umn.edu) for
compiling most of this FAQ.

Welcome to comp.sys.atari.st
============================

This newsgroup is devoted to discussion about 16 and 32 bit Atari micros. At
present that includes the Atari 520ST, 1040ST, Mega ST, STe, STacy, Mega STe,
TT, and Falcon. There are also emulators for the Apple Macintosh and IBM
PC/XT/AT available.

Most of the people who read this newsgroup are technically oriented.
The newsgroup serves as a resource for Atari users ... feel free to
contribute to the discussions.

Associated newsgroups include:
```

comp.binaries.atari.st ! uuencoded binary programs
comp.sys.atari.st.tech ! technical programming/hardware topics

:MODELS: 93.01.30
All the models in the ST line
==========

This is a pretty complete list of all the ST/TT models and their main features. If you have any additions/correction, of course, send them to me.

Feature key:
CPU's:
8 8 MHz 68000
16 16 MHz 68000
16/3 16 MHz 68030
32/3 32 MHz 68030

RAM:
/1 128kB
/5 512kB
1 1MB
2 2MB
4 4MB
S SIMM slots for expansion

Built-in:
F Floppy
M TV modulator

Extra:
AV 8 bit digital stereo audio, 4096 colors, hardware scrolling, analog joystick ports
MB MegaBus processor-direct bus slots
6U 6U VME bus slots, second serial port
FC Motorola 56000 DSP, 16 bit stereo audio, much enhanced video

TOS:
Highest built-in TOS

Models:
Name CPU RAM TOS B.I. Extra Comment

Falcon 16/030 S 4.?? F AV,FC Many enhancements!

:FALCON: ??.??.??
What are the specs on the Falcon?
==========

Here's some stuff I culled from the (reposted) Delphi conference with Sam Tramiel.

--- Start Quoted material ---
Here's the specs on the Atari Falcon 030:

CPU: Motorola 68030 running at 16 Mhz
32-bit Bus
Optional 68881 or 68882 FPU
RAM: 1,4, or 14 megs
Standard Atari Cartridge Port
Motorola 56001 DSP chip

Expansion Bus:

Internal direct processor slot for 386SX PC emulation, or other coprocessor

Graphics:

Super VGA graphics: 640x480 with 256 colors
True color 16 bit mode allowing a display of up to 65,536 colors
Accepts external video sync signal to allow high quality genlocking
Overlay mode for easy video titling and special effects
Overscan on TV's and ST Color monitors
262,144 possible colors
hardware-assisted horizontal fine scrolling
BLiTTER graphics co-processor

Sound features:

Eight 16 bit audio DMA record and playback channels
Stereo 16 bit digital DMA input
Stereo 16 bit DMA audio output
SDMA sound/DMA Coprocessor

Standard Ports

SCSI II port with DMA
High speed LocalTalk compatible LAN
Connector for analog RGB color (ST or VGA) or composite video
RS232C serial port
Bidirectional parallel port
MIDI IN/MIDI OUT
Stereo microphone input, miniature stereo plug
Stereo audio out, miniature stereo plug
Two joystick connectors
Two enhanced digital/analog controller/light pen connectors

Data Storage

1.44 Mbyte floppy disk drive
Optional internal IDE Hard Disk

System software

Pre-emptive Multitasking with adaptive prioritzation (MultiTOS)
Inter process communication
NewDesk desktop and eXtensible control panel
Multiple window user interface; number of windows limited
only by memory or software in use.
--- End Quoted Material ---

:ACCEL: ??.??.??
Hardware Accelerators
=====================
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

68000 based: ICD adspeed ST/STe
Fast Tech Turbo T-16 (16MHz)
T-20 (20MHz)
T-25 (25MHz)
68030 based: Gadget by Small SST (16MHz to 40MHz user changeable, 8 SIMM slot
68882 FPU socket, 1 expansion slot, TOS 2.0x).
Fast Tech : Tiny Turbo
Full size version

:TAPE: 93.08.11
Can I use a SCSI tape drive?
============================

Yes, just about any SCSI tape drive should be useable on the ST line. (Of
course, if your computer doesn't already have a SCSI port, you'll need a SCSI
host adapter.) There are at least two freeware/shareware programs that can
help you back up your HD to SCSI tape: TapeBIOS and GEMAR (a German GEM
ARchiver)

:DRIVES: ??.??.??
What should I know about hard drives and the ST?
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

To get a hard drive for ST, STe, Mega, Mega STe or TT(using DMA port):
1. Host adapter (convert the ST's DMA to SCSI standard):
ICD, Supra, BMS are the three major manufature. ICD has very good
software updating support and updates very often.
2. SCSI hard drive or MFM/RLL drive with SCSI adapter:
i). SCSI drive:
Like Quantum Pro80LPS, Seagate ST-xxxN series, they have a 50 pins IDC
connector, and usually say SCSI hard drive or Mac drive. (Any Mac except
Mac128, Mac512, FatMac has SCSI built in, so a drive that works with Mac
usually has SCSI interface).
No other adapter needed, just connect to the host adapter in 1.

ii). MFM/RLL drive:
These types of drive is older and used in older IBM machines. To use
them you need an adapter to convert them to SCSI. Adaptec 4000/4000A
is for MFM, 4070 for RLL drive, Emulex and OMTI also has similar cards
availible. Adaptec has stopped production for quite sometime so look for
these in used/liquidation place. (usually goes $40 to $75 each).

Connect the drive to the adapter (said Adaptec 4000) then connect the
adapter to the host adapter. (said ICD). It looks like following:

```
-------------- ----------- ------------ ----------
| MFM drive |------->|ACB 4000 |------>| ICD |------>| ST DMA |
-------------- ----------- ------------ ----------
```

3. Case, power supply and cabels for the drive system:
Unless you have Mega, Mega STe, TT and the drive is 3.5" so you will put
the drive internally, you will need a case with power supply to house the
adapter and hard drive. IBM case is very easy to get and has a lot of space
for expansion.
For older drive you need about 40 watts each drive, for newer 3.5" drive
they use about 20 watts or less, Quantum LPS drive use about 10 watts each,
make sure your power supply has more than the drives need. Again if you
use IBM case, the 150 watts power supply for that type case can drive at
least 3 drives without problwm.
Cables: DMA cable usually comes with the host adapter.
power cable from power supply to drive usually comes with power sup
SCSI cable from host adapter to SCSI drive or adapter(for MFM/RLL),
it's 50pins IDC female connector on each end with 50 conductors
cable. Should be availible at place you get the drive.
For MFM/RLL drive you will need the usual MFM/RLL drive cable:
(a 34 conductors cable and a 20pins connector, again should be
available at the place you get the drive).

Now, connect them all together. Before power up, check the connection again.
And check the jumper setting on the drive (consult the drive's manual). If you
are using more than one drive with the system, make sure only the last drive
has the terminator (either a DIP or a signle inline package of resistor, which
usually is socketed and close to the SCSI connector on the drive circle board.
Remove the terminator from other drives. [only the last drive should have the
terminator]

Software usually comes with the host adapter, or you can FTP atari's AHDX5
from ftp sites.

:FLOPPY: 93.08.11
Can I use 1.44 meg floppy disks and Flopticals?
==========

1.4 megabyte floppy drives will soon be available from Atari for MegaSTe
and TT machines. If you own an older Atari ST, there is a company which offers
a $199 kit (including floppy) to install and use the drive.

Note that Tos versions prior to 2.05 will not format a 1.4 meg floppy from the
desktop.

Floptical drives (floppys that use optical tracking to get 21MB on a 3.5" disk)
can also be used through a SCSI port. ICD's newer host adapter software (the
'PRO' version) will handle them.

:GRAPHIC: ??.??.??
How can I enjoy enhanced graphics on my ST?
==========

For stock STs, JRI makes a chip which allows a 4096 color palette.
There is also a public domain enhancement that allows 32768 colors on
older STs. This can be found as 32kcolor.lzh on some archives.

There are a number of graphics boards on the market. Here is a first pass
at listing some of them. The information is based on postings by Ben Gilbert
and Jari Lehto.

C32 board by Matrix Datensystem (Germany)
* 800x608, 256 colors
* all ST/TT models
* 256k, 512k and 1meg versions

C75Z board by Matrix Datensystem (Germany)
* 1024x768, 256 colors
* Mega ST or STe, TT VME Buss

(Matrix GmbH has over 15, maybe over 20 with all versions, different
graphics boards available, from hobbyist to professional, from CAD
to GenLock and digitizing.)

ISAC board by Dover Research Company (U.S.)
* 1024x768, 16 colors from palette of 4096
* makes hi-res look like ST low res, just with a huge window
* Mega ST buss
* Dover Research Co. (612) 492-3913

The Imagine by Wittich Computer GmbH (Germany)
* 1024x768, 256 colors
* Mega ST only

(Versions available for all ST/TT models. Several possible resolutions.
Reasonable price, but slow and not very compatible..)

Crazy Dots by TKR (Germany)
* 1024x768, 256 colors
* Mega ST only

(1280x800, 256 colors out of 16.7 million color palette. 1664x1200 for
both 16 color and monochrome. True color option available. Mega ST,
Mega STe and TT.)

reSOLUTION SuperVGA by GengTec (Germany)
* 8 resolutions, 320x200 through 1600x1200
* 16 colors without driver, 256 out of 256,000 with driver
* 1 mb RAM
* uses a standard VGA monitor
* Mega ST or regular ST
* available in U.S. from Rio Datel, 1-800-782-9110, (702) 454-700

(1024x768 is the highest resolution with 256 colors. Driver is called
Multicolor VGA option. Compatible with NVDI and Blitter. Multisync
monitor recommended.)

AlberTT
* like ISAC card, but specific for TT VME buss

MegaScreen
* 832x624 monochrome
* connects to MegaBus
* works with Spectre

Reflex
*1024x1024 with SM124 monitor
*2048x2048 possible with expansion
*usable with most big-screen displays

ODIN by Marvin AG (Switzerland)
* external expansion
* gives TT-resolutions to a regular ST

Cyrel
* RISC-based card
* extremely costly

Here's a few more cards, available from OverScan GbR, Saentisstrasse 166,
1000 Berlin 48, West Germany, ++49 30 721 94 66, ++49 30 721 56 92 (FAX),
++49 30 727 05 6 (Mailbox, language: German)

Autoswitch OverScan for the ST (NO STE compatibility) is DM 129.--, you
don't have to buy a new monitor. The maximum resolution on a SM 124
is variable, but in most cases at about 732*480.
AutoSwitch OverScan TT is a VME board. It's about 249.-- DM, you also can use
your old monitor, but it only works in the TTs five color modes
(3 ST-compatible modes, 2 TT-modes). Resolutions are variable, ask
OverScan about the values for your monitor.
Falcon ScreenBlaster blows up your Falcons resolution to a maximum of nearly
900*600 on SVGA-monitors. It'll be shipping as soon as Falcon030s

become available, and the pricing will be near 150.-- DM.

Graphics cards for which information is sought:

OmniChrome board by Omnimon Peripherals

JRI GenLock

Atari/Lexicor 24 bit color card

Jari Lehto proposed the following recommendations:

Low budget SVGA - reSOLUTION
Professional high-end use Cyrel (or is it Cyrix?)
Hobby or semi-pro DTP Reflex
Hobby DTP MegaScreen
To obtain TT resolution ODIN

:KEY: 93.09.02
A few keyboard questions
========================

Here's how to connect a MegaST-keyboard to a 1040ST:
It's taken from the "ST-Computer" October '90 ('Quick-Tips')

Picture 1

Mega ST-Keyboard cable
(seen from outside)

```
It's no problem to connect * 1
the MegaST keyboard to the ____________ o
smaller computers 520St and ___| | * 3
1040ST. To do that, you only | 6 * | * 4
have to get a 6-pin western | 5 * | * 5
connector plug to be connec- | 4 * | * 6
ted to the keyboard. (available | 3 * | * 7
in Electronic shops) After that | 2 * | * 8
four cables must be connected | 1 * |
with the 'Pfostereihe' (the |___ | 1040ST
plug inside the 1040ST) where |____________| Keyboard-Plug
normally the dazzy original-keyboard
is plugged in. The exact connection Picture 3
is shown on picture 2 and 3
```

Eickmann Computer, Franktfurt

```
* * * * * * * * * * * * * * * o *
18 17 16 15 14 13 12 11 10 9 8 7 6 5 4 3 1
```

Picture 2 520 ST Keyboard plug (not for You, Jeff)

Picture 3 (Meg to 1040ST) Picture 2 (Meg to 520ST)
MegST MegST
keyboard cable <--> 1040ST plug keyboard <--> 520ST plug

```
6 <--|----> 8 6 <--|----> 1
| |
5 <--| 5 <--|

4 <-------> 5 4 <-------> 14
3 <-------> 6 3 <-------> 15

2 <--|----> 4 2 <--|----> 13
| |
1 <--| 1 <--|
```

****
And now for No.2
****

If you remove the keyboard from the Mega ST and switch on the computer,
the computer won't boot up and send you a series of 'Alert-Beeps'.
If YOU want to let your Mega ST run without a keyboard (FAX-Server a.s.o.)
simply connect a restistor to the keyboard-plug in the Meg and at once
there's silence and he'll do his job!
(Freely translated from Eickmann-Computer by me)

```
6 * 10kj resistor
5 * _____
4 *----|_____|--
3 * |
2 *-------------+
1 *-------------|
```

Mega ST keyboard-plug
(inside-view)

****
And here's another one: This one's about the Hardcopy-function of the ST's
****

Do you hate it - after pressing <Alternate>+<Help> the same time - when
you don't have a printer connected to the parallel port of your ST and
must wait a long time to work again because of the long break taking the
computer to realize that there's no printer connected?
Well, do this and forget about it:

connect the following pins of the printer port of your computer (better:
create a Sub-D 25pin-male-plug an connect the pins on the soldering side):

pin 13 connected to 14 and 15 (all across the plug)
pin 1 connected to 10
pin 23 connected to 11 and 12

****

:JOY: ??.??.??
What joysticks work best with the Atari ST?

The Atari ST works with joysticks with a 'standard' D-Socket. IBM-style
joysticks, Apple joysticks, and Nintendo joysticks will -not- work.

Some recommended joysticks:

Konix Navigator - "best .. if you want to use it for any length of
time"
Gravis - "responsive ... great for games like MidiMaze"
WICO - "strong reed switches, hard plastic and metal components"
Atari - "FAR more controllable and responsive than other, more durable
units"

:MODEM: ??.??.??
What modems work with the Atari ST?

Any external modem should work fine with the Atari ST-series of computers. You will need to purchase or build an RS-232 cable. Be sure the cable is capable of establishing DTR with your modem, as many telecommunications packages check the status of the DTR line. (Ask your local hardware guru if you don't know what DTR is...)

The ST can connect to modems at up to 19,200 baud. Practically, you will purchase either a 2400-baud or 9600-baud modem. The cost of 2400-baud modems has dropped so much in the past few years that you should not even consider a slower modem. Believe me, modem speeds under 2400-baud are going to seem SLOOOOOOW to you!

You will probably need a serial port patch program to use high speed modems on your ST; most versions of TOS have a bug in CTS/RTS handling.

:MONITOR: ??.??.??
What should I know about monitors and the ST?

The monitor is your connection to the ST. Without a monitor, you're typing blind. (Unless, of course, you have an RF modulator on your ST and attach it to your TV set. This is discouraged, as the bandwidth and resolution are pretty terrible for anything other than arcade games.)

There are three monitor choices for those of us owning Atari ST/STe equipment:

1. Monochrome monitors - these include the venerable SM124, one of the sharpest monochrome monitors on the market. Street price is about $150, used monitors should run around $80-90. You can also purchase a 19" monochrome monitor. This gives you a 'big screen' to play around in, and is best for work with DTP and CAD systems. The price is a bit high at $1500+, and you'll need a plug-in board, which is generally set up for the Mega ST machine.

2. Color monitors - including the SC1224 in all of its incarnations (JVC and Goldstar being the primary vendors). The newer monitor, the SC1435, has a 14" screen and stereo sound.

3. Multisync monitors - these monitors provide monochrome and color access in one monitor. The street price is around $450, about $100 more than a standard Atari color monitor. You need to reset your computer to change resolutions. In many cases, a nice little switch box is provided (or you can build one) which does this for you. Examples of multisync monitors include the OMNIMON RAINBOW MONITOR.

There are any number of monitor choices for those owning Atari TT equipment, although they all boil down to 'multisync VGA'. There 14" color VGA monitor from Atari is quite nice, as is the 19" monochrome monitor. Any standard 14" multisync VGA monitor will do as well. Forget moving your SM124 or SC1224 monitor to your new system, the cabling and electronics is just not going to work.

:PCEM: ??.??.??
How can I turn my Atari ST into a PC emulator?
==========
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

Supercharger is the only external PC emulator with 8MHz V30 and 1MB RAM in a nice lunch box. It connects to ST's DMA port and defaults as device 3. It's powered by external power supply. Has 8087 socket and one expansion slot. The 1MB RAM can be used as RAM drive by ST when the IBM side not used.

:SPECTRE: ??.??.??
How can I turn my Atari ST into a Macintosh emulator?
==========
(Thanks to Wayne (trek@ihlpb.att.com) for this info.)

Product: Spectre GCR from Gadgets by Small, Inc
40 W. Littleton Blvd
#210-211
Littleton, CO 80120
Retail: $299.95

Description:
The Spectre GCR is a combination of software and hardware that allows the Atari Mega/ST/STe/TT line of computers to emulate an Apple MacIntosh Plus(tm) Computer. The emulation is so good that most Apple software runs out of the package using your Atari Disk drives to read in the Mac software. It does all of this while running 20% faster than the program would on a MacIntosh Plus and provides you a 30% larger screen area.

The Spectre GCR is a combination of software (written by Gadgets by Small, Inc), a cartridge (also from Gadgets), and a pair of 128K Apple ROMs (from either a MAC 512kE(tm) or Mac Plus - part numbers 342-0341 and 342-0342 which you purchase separately from an Apple source.) The Apple ROMs can currently be purchased for around $150. MacIntosh documentation and software, including the operating system (referred to as System/Finder), are also required to round out the package.

The Spectre software is currently at release Version 3.0. Gadgets supplies fairly frequent updates to allow you to keep up with the Apple OS releases. The Version 3.0 update retails for $20. Version 3.0 supports 15 of the 128K OS releases up to, but not yet including System 7 releases.

Spectre software supports Mac formatted disks (including formatting your own) with your Atari drives, Mac sound, large screen displays (1280x960) Mac harddisks via SCSI through a Megatalk board (retail $299.95 from Gadgets) or through an ACSI-SCSI host adapter (my Syquest works beautifully- and

the excessive use of disk accesses in Mac software will have you wanting
a hard drive). Spectre 3.0 also supports DOS Mounter and Apple File
Exchange if you are needing MS-DOS data disks for Mac work. Language
configuration support, keyboard support, A4 paper size support for
Lasers have also been added to 3.0.

Running Spectre:
The feeling you will get when you see your Atari transformed into a
MacIntosh with a decent screen is indescribable. The extra flexibility
that you get will also make you feel more confident in the greatness of
your Atari. You will also get to see some of the frustrations with one
of the other sides of the fence - frustrations like excessive disk access,
remembering not to remove/change a disk unless the OS tells you to, etc.

Speaking of changing disks, there are major differences in the operating
philosophies of an ST and of a MacIntosh. You really must read the
documentation that comes with the Spectre GCR (and I for one found that
a real delight. Dave and Sandy have a very different approach to software
documentation that makes it enjoyable reading.) You should also read the
Mac Operating System docs. One other reference you may need if you are
going to do much with Mac software is one of the reference manuals
referred to as the MacIntosh Bible.

If you ask an Apple dealer if a particular piece of software runs on
a GCR, don't figure you will get a straight answer. They won't know.
The current compatibility list from Gadgets lists about 450 programs
and their release numbers that have been tried and found to work with
Spectre GCR. In general, if a piece of software won't work with the GCR,
it is probably becuase of copy protection. Most serious Mac software is
not copy protected.

One last note - earlier versions of the emulator exist that were not capable
of reading Mac disks directly. It's a capability you will want.

(Thanks to Shoou-yu Tang (sytang@lamar.colostate.edu) for this info.)

Spectre GCR is the best availible, you need to obtain a set of 128KB ROM from
Apple (they are used in Mac 512KE and Mac Plus, noted that Mac512 use older 64
KB ROM which is not good) to fully utilize the device. Also it's recommanded
to use it with MONO monitor and at least 2MB RAM. The Spectre software takes
about 300 some KB of memory, so on a 1040 there is not very much left for Mac,
especially after the Mac system is loaded. 4MB memory and MONO is best.
It can read/write Mac disk direct using ST's drive (double side drive, as most
Mac drive is double side). With DOS mounter or software like that you can read
/write ST, IBM disk from the Mac desktop as well (don't try to run the ST, IBM
binary. It's only for file transfer). Or you can use Apple File Exchange to
read/write ST, IBM disk.
Syatem 6.0.5 runs fine, system 6.0.6, 6.0.7 runs also. But system 7 will not
run with it.

:UPGRADE: ??.??.??
Can/should I upgrade my ST?

The answer depends on the type of ST you currently have, and what you want to do in the future. Be aware that there are a large number of modifications one can perform on the venerable 1040ST, and that newer machines are coming down in cost so much that to obtain a certain feature it may be cheaper to purchase new than to upgrade.

1. Memory - most ST machines may be upgraded to 4 megabytes. The newer STe machines use either SIP or SIMM

2. TOS - for those still running TOS 1.0, now is the time to consider an upgrade. TOS 1.4 has been around for at least 2 years now, and is -much- faster (and safer) for those using hard drives. TOS 2.06 is available as a hardware upgrade to ST and MegaST machines for about $150 from CodeHead

This makes no sense at all. A tower-style design for a consumer model? I
thought the current Falcon *is* the consumer model...

Sorry, I got it confused with someone else. My apologies. Regarding US support. I hear that NVDI is now available in the US. You can always order stuff from Germany or the UK (where the docs are in English). HiSoft and Compo are two companies that have many Falcon compatible or specific products. Oh and Cubase Audio.

It's a shame ther's not more, but there is quite a bit as it is. It seems that some good products are coming from America - Geneva, The Atari Compendium, STraight FAX, NeoDesk 4, Photo CD software...

114. Re: Dumb questions re 1040ST

Newsgroup: comp.sys.atari.st
Date: 1993-10-03 08:40:11 UTC
From: rodr@netcom.com
Message-ID: <rodrCEBC30.sL@netcom.com>
Source record: 200346

Many thanks to the following kind and helpful souls who answered my newbie questions regarding a 1040ST that I was resurrecting from the bowels of my basement:

Richard M. Venable
Earl Hood
Lars-Erik Osterud
Kevin Scruggs
Jan T. Kim
Kendall Helmstetter Gelner
Robert Anisko
Winnipg
STIRRE31

Jan T. Kim's reply seemed especially useful and interesting, and I include part of it here:

> This sounds like you have a machine of the first days there,
> which has TOS (abbreviation for The Operation System (not
> kidding) for the Atari ST) not in ROMs, but needs to load it from
> a disk, the said language disk. Since 1985, when the first TOS
> ROMs became available, we have seen TOS 1.02 (a few bugs of 1.0
> fixed), TOS 1.04 (lots of internals really fixed and improved,

> multitasking, but they are only useful if you have a harddisk and
> lots of RAM, and you're going to wish for a TT if you start using
> them. I did, and now I do have a TT.
> Before getting any ROM set, you need to determine whether your
> machine needs a set of two or six ROMs. You have to open it and
> check. If you do that, be prepared for some difficulties, there
> is a metal shielding case inside the plastic case, and that is a
> mess to take apart sometimes.

Incidentally I do already have TOS in ROM, but do not know how to determine what version it is. It seems to work fine with the software that I have tried.

Robert Anisko noted the following, which saved me a lot of grief:

> One last point that might help ya. You'll notice that some of the
> Atari files in the various FTP sites are archived with stuff like ARC,
> LZH (LHA/LHARC), ZIP or ZOO. These are compatible with the PC format,
> so you could un-archive a file (maybe read the README.TXT) right on
> your PC - so everything could be ready to plug and play when you get it
> to the Atari...

Regarding terminal programs, the following were recommended. I
list them here roughly in order of popularity:

Uniterm
Freeze Dried Terminal
Vanterm
Connect
Interlink (commercial software)
Miniterm
Ansiterm

Uniterm was by far the most popular among the respondents, and
perhaps that is to be expected on the Net because of its Unix
orientation. After studying the various comments, I tried out
Uniterm and Vanterm and decided that Vanterm would be more
palatable for my sister (for whom this system is destined)
because of its friendliness and relatively attractive use of the
color display, and because it would be used mostly with
Compuserve. I suspect that I would be more biased towards
Uniterm if I had the hi-res mono display.

Hi guys!

I've been busy installing Hermes UUCP this weekend but I couldn't get the
"paths" file right. No matter what I do, mdbs won't take it and pathalia
also complains sometimes. Has anyone gotten these file right?

The configuration I want is very simple: I have one host (sphinx) in two
domains (tnc.nl & nl.tnc.net) and I want all mail except local mail
to be forwarded to the host "tncmail" in the same domain.
How am I supposed to set up the "paths" file for this?

Thanks in advance! Vincent

CuBase is arguably the best MIDI package out there. It's not cheap though. If you are just getting started you might consider some of the other commercial products such as EditTrack from Barefoot software or TigerCub from Dr. T's

The Atari drive can read MSDOS Formatted 3.5" DSDD disks. However, due to a slight difference in the bootsectors, the ST cannot detect a media change with an MSDOS disk. If you're swapping a lot of disks, you should place an Atari disk in the drive between each MSDOS disk. I'm sure that it would also be possible to read a Sun disk, but I don't know if anyone has written a driver (Atari format is MSDOS, which is why it's so easy to read PC disks).

Good luck.

Congratulations! I didn't know they were still available ;) if you want a good
comm software then get CONNECT, you'll find it in atari.archive.umich.edu in
/atari/Telecomm somewhere called comething to the effect of connxxx.zip ??

oh well...anyway..it's good ;)

>access to atari.archive.unich.edu via Internet using Sun worstations. I can ftp
>s/w onto a 3.5' floppy disk in Sun or MSDOS format. How can I then transfer this
>s/w to my atari? The atari drive cannot read MSDOS formated disks can it?

What you need to do after you uploaded something into your directory (naturally
binary) you then ZMODEM/X or Y (or maybe kermit...but don't...it's...sloooow)
it straight onto your HD or Floppy, you need a terminal program to do that...
eg. CONNECT which in my opinion is one of the best with built in transfer
protocolls...owever there still are other ones like Stalker, FZDT...Uniterm.

Connect is shareware..you can try it out......can't hurt :)

Your Atari drive can read MS-DOS disks..however not the HD ones..as...most
likely your 1040 STE will have a 720K drive. However if you FTP'd something
and then download it into your Atari via a terminal program..it doesn't matter.

If you FTP'd straight onto a floppy from a PC...at wherever you are doing it,
make sure that that disk is a double density formatted disk i.e. 720Kbytes..

>Is there a sollution to my problem?

The Atari CAN read DOS formatted diskettes; due to a minor difference in the boot sectors, diskettes formatted on the ST are not necessarily readable on a DOS machine. There are programs at a.a.u.e to fix that, however. So:

Always format the diskettes on the DOS machine; just be sure the density matches. Double density (~770K) is a good first try; if the DOS drive is high density (1.44 MB), you will need to use a command line flag with FORMAT to get double density. Sorry, I don't use DOS enough to remember the flag :-)

I just 'inherited' a Supra Faxmodem v32bis..... what do I have to
do to get it working with my Mega STe ?

I tried JUST swapping the cable from my current Supra 2400 baud modem
but it didn't seem to work well.....(ie. at all)

While I can dial it never connects.

Does anyone also have the setups for one of these modems to use it
with either Connect or Uniterm (Yes, I know it won't be very fast with
Uniterm but that'd be better than the 2400 I'm using now)

ANy help would be appreciated.....

Thanks

By the way, the "technical" newsgroup is comp.sys.atari.tech

If the comp.sys.atari.st newsgroup can't be used by a former ST owner to ask how the state of the marketplace is doing, then I submit that we've lost a lot more than just dealers and magazines.

A simple answer to a simple question shouldn't need days of wrangling to justify its existance.

BobR

Well, I would say that the dealer network has shrunk somewhat. There are still a number of dealers around, though, and almost every dealer I knew of 6 years ago is still around... This may vary in your area.

However, I would say that the software base is stronger than it was 6 years ago - All of the programs are newer, stronger, faster, better. The DTP software is just getting better (Calumus SL is amazing, and Pagestream 2.2 is pretty nice - I just wish they'd come out with a new version...). Music software is continiously improving, and I think the best of any platform. Programming wise, I still prefer my Atari over most anything else (and I have extensive programming experience on Suns and PC's). And for word processors, well there are so many choices I won't even go into them here... (I really like Atariworks so far though... it has the first spelling checker I like as much as WordPerfect's). For almost any software category, equivilent software exists on the ST that are on the same level as the stuff on other platforms.

Now you say that you are a FORMER Atari owner. Pretty shaky ground to be commenting on the state of software or support, don't you think?

>one of your own..? Who's being predictable now..?

Gee, sorry, Bob. Feeling a bit sensitive today, eh? That's predictable too :)

C'mon, you know I was not flaming you or belittling (?) your comment about the state of the Atari market. I simply stated (humorously, I thought) that you were consistent in your outspoken, public comments against Atari. I think most readers of this newsgroup would agree with that, don't you?

Neither am I arguing with you. Like it or not, I must agree with most of your conclusions. I just don't see the need to constantly bash Atari. But I see little point in waving the 'I Love Atari' banner while my feet are sinking in technology quicksand, either. Either extreme is a moot exercise, IMHO.

I freely admit I LIKE Atari computers. But hey, I also like (and own) a Mac and pc, as well. So sue me. :)

>I have to wonder why it is none of you have tried to answer the question
>about the state of the Atari market now, as compared to six years ago...

OK, "The Atari market today is worse than it was six years ago, Atari dealers are harder to find and there are fewer software titles available." Hey, now _that's_ some ground breaking news, eh? But I _still_ might recommend a Falcon purchase to someone if I thought it best for their needs.

Cheers (and enjoy what the Lord gives ya),

>However, due to a
>slight difference in the bootsectors, the ST cannot detect a media change
>with an MSDOS disk.

This problem arises if the serial numbers of different disks are identical. According to my experience, MS-DOS does generate random serial numbers for each disk it formats, but of course, various third party formatters may not. Some Atari copy programs put the same serial number on all disks they format as well, e.g. certain versions of FastCopy. I once goofed up a demo of my software in front of a big audience because I prepared my disks with fcopy. And some TOS versions rely on different disks to have different serial numbers more heavily than others, so the disks worked flawlessly when I tested them at home.

>I'm sure that it would also

I think you hav a problem with a IC or with a soldering.
I don't think it's a memory problem because, in my experience,
such damace cause a boot failure or a boms-crash. You should
look at solderings on IC pins, on the rear of the motherboard.

Bye,
Roberto.

My ST was shocked to learn that NetHack is Falcon-specific; even
Warwick's 16-colour GEM version works fine on it.

What about people with no net access? No Falcon software! Ouch!

I wonder too... Did you try any of these in ST screen modes?

If NetHack won't work on your machine, you've got _serious_ problems;
NetHack doesn't do _anything_ machine-specific.

I don't think it allocates much while running; NetHack-- 3.1.3, whose
binary is about 930k, never seems to grow larger than about 1.2M in
memory. I wish G++ worked like that! :-)

138. LEXICOR and Graphics Mailing List

Newsgroup: comp.sys.atari.st
Date: 1993-10-03 22:01:29 UTC
From: Lexicor@world.std.com
Message-ID: <CECD6I.Eu6@world.std.com>
Source record: 200112

Hi everybody..for all of you who do care...Lexicor Software is making a mailing list, however this mailing list should not only cover Lexicor Software 3D Graphics stuff..but also other Atari-Graphics related subjects, for people with Graphic Cards...Animation on Atari...Paint Packages and of course any 3rd Party Graphic Boards..as well as all the products that we support in the U.S.A. eg. Outside in th U.S.A and England.

As of now..discussion can/should be on any graphics related topic with any Atari System...16bit however..dunno much about them 8bit micros :)

Lexicor Software Products are:

Phoenix (Xenomorph-3D) U.S.A. th Object Renderer

Chronos-3D the key-frame-animator

Raystart, the raytracer

Prism Paint II, th new multi-purpose modular painting and animation package

GENESIS the fractal world builder and star effects etc.

the NOVA Graphics Boards and th SuperNOVA Graphic Boards

Cybersculpt and CAD 3D2 Studio...

ANM-Link, general q&a on rendering, raytracing etc., I think this could be of interest...especially that the graphics software market is growing in the Atari Falcon i.e. general market (despite the market situation).

So anyone who does wish to join...please email me at:

Lexicor@world.std.com with a request and I will put you on the list

Yat

ps: I'm waiting for a big enough list so I can put it straight into the file.

> If I remember correctly, Bitstream has more than 1000 fonts ready for purchase,
> which will all work fine on SpeedoGDOS.

I think I have almost 600 type-1 fonts (which I use with PageStream).
All but about six are Shareware/Freeware; the other ones I got for about
$45 from Adobe for the Mac version of ATM that I got for free (again,
from Adobe).

$45 for 600 fonts... that's about 8 cents a font. What does BitStream
charge you for fonts?

> with either Connect or Uniterm (Yes, I know it won't be very fast with
> Uniterm but that'd be better than the 2400 I'm using now)

Uniterm would be considerably faster than Connect, as it uses the TOS style textual interface as opposed to GEM windows.

Now, to set it up, do the following:

1. Get Serial Fix 2.x (or another of the fast modem RTS/CTS programs). Install it in your auto folder.

2. Run Uniterm. Go to the RS232 settings menu, and set the following:
Speed: 19200
Flow: RTS/CTS
Parity: None
Bits: 8
Stop: 1
Echo: Full
This should be fine, but if not you can fix it later. Save the settings and reboot your machine. Then, run Uniterm again.

3. Reset your modem to the factory default, by doing "at&f", then "at&w". This will probably be fine (you may have to do an at&c1&d2&w, but you can find this out later). The "&w" commands will write the new setup to non-volitile memory, so you only have to do them once.

4. Type "atdtXXXXXXX", where the X's are a modem phone number.

That's about it. With the above settings, you should be able to connect to something. If things are weird (double letters, etc.) you can fix them from Uniterm (either by changing Uniterm settings, or reprogramming the modem).

If the carrier detect light stays on when you are not connected, try that at&c1&d2&w command.

> Is there a sollution to my problem?

The Atari is able to read 720Kb DOS disks (or if you have an 1.44 MB disk
even this one). If you have TOS >= 1.04 the Desktop-format will produce
720Kb-DOS-disks. Otherwise you have to formaet them on a PC (with the
propper option(s) to produce 720Kb disks instead of 1.44Mb).

Bye,
Wolfgang.

I need some money to buy an Epson Action Laser so I'm clearing out
some odds and ends. If you are interested in any of this stuff
please e-mail (and any REASONABLE offers will be considered).

Magic Sac Mac emulator cart w/64K ROMs $40.
Supercharger IBM XT emulator box w/power supply $100.
Timeworks Publisher v.1 $35.
VIP Professional Spreadsheet $25.
MultiGem Plus w/utils v.1 (doesn't work on STE) $20.
Populus (doesn't work on STE) $15. Kult $5.
World Class LeaderBoard Golf $5.

Epson Action Printer 3250 24 pin printer w/tractor feed add-on $135.
Panasonic KX-P1124 24 pin printer $100.
Atari SLM804 Laser Printer w/DMA Switch $375.
Atari Sc1224 Color Monitor $125.
Silver Reed 87EP Elec Typewriter w/parallel interface $60.
Atari (orig) joystick $3.
Atari mouse $3.

Buyer pays shipping and COD (unless pre-paid). All software is
original and comes with orig manuals, but no boxes (I threw 'em
away). No manual for the Supercharger, but lots of text files on
disk, incl info d/led from GEnie.
If interested e-mail me at dirk.vandenheuvel@nezuld.com

Discredit anyone..? What gives you that idea..?

You're right, my reply to Kendall was a bit rude.. but he's not the first to have demonstrated that he has NOT read what I've posted, nor followed the thread, yet he feels qualified to tell me that since I said I don't own an Atari, I shouldn't have an opinion.

I never said that.

The first person, who originally posted the first question in this thread said that *THEY* used to own an Atari ST six years ago.

I've *already* posted in this thread that I own, and like, an Atari ST.

So, if you can't follow the discussion, why not refrain from criticising ANYONE, ok..?

With the exception of two very good posts about the state of Falcon support in the United Kingdom, about all I've seen in this "discussion" is a lot of people whining that they don't like my "style", or they can't bear to hear anyone say anything that's not gushing roses for Atari.. VERY LITTLE contribution to the original discussion.

So, Jason... why haven't YOU contributed anything to the discussion..?

BobR

Atari ST Computer for Sale:

- 520 ST upgraded to 1 MB RAM
- Spectre GCR with ROMS runs Mac Plus software (& reads Mac disks)
- Supra 2400 bps modem
- 20 MB hard disk in a BMS cabinet (large power supply, fan, and
room to add 1 more half hight drive (or 3 if remove 5.25" disk)
- Panasonic KX-P1091 printer with stand
- high resolution monochrome monitor with stand
- can run color software when hooked to TV set
- mouse
- high quality joysticks
- lots of software and books

Specs:

Motorola MC68000 processor @ 8MHz. Fast as a Mac Classic or SE, or a '286 PC.
Spectre GCR to run Mac black and white software.

1 Meg RAM, 192K ROM.

1 360K 3.5" floppy drive, IBM and Mac compatible (you can read and write IBM
disks)

1 360K 5.25" floppy drive (not reliable -- may just need to clean heads.)

Sound included.

Software:
- Spectre GCR with ROMS (Mac emulator)
- PC Ditto (IBM PC emulator)
- Omnires (allows you to run color software on monochrome monitor)
- Phasar (home finance)
- Tempus (text editor)
- OSS Pascal compiler
- CircuitMaker (digital logic editor/simulator)
- Flash (terminal program)
- Shadow (background file transfer)
- Harrier Strike Mission
- Pro Football Wizard
- Silent Service
- Star Glider (GREAT game!)
- Hippo Computer Almanac
- ST Basic computer language
- ST Logo computer language
- lots of good public domain software

Books:
- ST Manuals
- Atari ST GEM Programmer's Reference (Abacus)
- Atari ST Machine Language (Abacus)
- Programmer's Guide to GEM (Sybex)

$700 or best offer.

Huh? All I did was said that the software market was not so bad as
others might think.

Or do you mean that you ARE a current ST owner? I had thought you
said in the message I replied to that you were a FORMER ST owner, I
apologize if this is not so.

> Thanks very much.
> Joe

There's Sound Designer, but its only sold with hardware now. And Alchemy, which is no longer available. But maybe there's some used copies out there. I dont want to spend 400-500 dollars, but the only other option is to get a C manual and write one myself (yeah right!). Nope, there are no shareware/PD sample editors out there for the ST that I've seen (that handle MIDI dumps anyway). Good luck!

Unless you're talking about a really big file it doesn't matter. Even a 256k+ file on the Falcon doesn't take that long. And if you're running deskcopy it clears up everything except loading and saving.

Why then did you complain about it in the first place??? I'm sure "everyone else" is quite capable of looking after their own interests, without you acting as some sort of "net-cop" on their behalf.

> At 9600 baud, your Falcon picture took only a fraction of a second,
> and then it was gone...

Guess it was too small then. :-) Anyway, it wasn't very good, there were at least two major errors in my piccy. No points rewarded to anyone that spotted them! ;-)

> Maybe you should ask the group members I've helped with games,
> telecom questions, hardware problems, etc, before you waste our time
> with your "whinges"... (thanks for the definition, John H...)

Waste time is what I've been doing since I started to reply to your posts. I regret that I entered this discussion with you since you're obviously totally ignorant of any argument put forward that doesn't fit in with your view of the situation.

The Falcon is selling (at least in Europe), more hardware and software is appearing faster than I can keep track of and more happy users are doing great things with their new Falcons! Why not join in the fun instead of trying to write down Atari on every opportunity? You sound like you could need to cheer up and relax.

I could go on about this but I'm not sure you'd care what I or anyone else for that matter has to say. Besides, my local BBS doesn't have the _proper_ newsgroup .ADVOCACY so I wont. Too many people, including myself, wouldn't like to see this kind of thread appear any more often in here than it's already doing, something which I think you too ought to consider for a while. You DO have access to .advocacy, don't you? I believe it was created for this kind of discussions...

>Steve
>selick@csa.bu.edu

I *love* Notator SL - have used it for about 3 years. I'm *iffy* on
Notator Logic. I've been trying it out at a local recording studio for
a month now, and if you're used to SL, be prepared for a shock.... Logic
is a completely different program.

What I like: What I don't like:
Object oriented- it's incredible Object oriented- it's hard to get
what you can do with it! my head into all the apps.
Total Flexibility- up to 9 screens Lousy Manual- full of features, but
with up to 7 windows in each. no mention of what to use where.
Windows- Environment, Arrange, Score Tutorial- Doesn't Exist!- for a huge
Transport, Hyper Edit, etc.etc. program it's unforgiveable.
Open Ended Arranging- using folders Extreme Learning Curve
and nested folders Notation- it's better in SL!
Notator SL 3.2 is included!
New Dongle with four midi outputs!

So right now, I could take it or leave it. I do alot of Notation work too,
so I still prefer SL for that. Another thing about object oriented
sequencing: it takes awhile to get comfortable using all the screens and
icons (rather like Calamus gone mad) when you are used to a set graphical
interface that you work with day in and day out. In other words, SL gives
you a familiar user interface, but _everyone_ using Logic will use it
differently (and it can look like whatever you want it to). So if I'm used
to using it one way at home, then go to the studio where I record, the
engineer will undoubtedly use it differently, with different screen lay-
outs. It's just a little unnerving.

I may grow to love it. But I, for one, am holding off on that upgrade
fee until it proves itself to me. BTW, you are getting a whole new program

for that $299, plus the version 3.2 SL upgrade.

Bruce

>I don't own an Atari, I shouldn't have an opinion.

>I never said that.

Why don't you try treating others and thier opinions in this group with a bit more respect and perhaps they would do the same for you... It's not that people can't answer your questions Bob... Your sarcastic and unfriendly approach either puts people on the defensive or makes them not take your questions seriously.

>The first person, who originally posted the first question in this thread
>said that *THEY* used to own an Atari ST six years ago.

>I've *already* posted in this thread that I own, and like, an Atari ST.

>So, if you can't follow the discussion, why not refrain from criticising
>ANYONE, ok..?

Bob, I simply made an observation about the way you treat others in this group. I have given you no indication of what I do or do not know about this thread. Take your own advise...

>With the exception of two very good posts about the state of Falcon support
>in the United Kingdom, about all I've seen in this "discussion" is a lot
>of people whining that they don't like my "style", or they can't bear to
>hear anyone say anything that's not gushing roses for Atari.. VERY LITTLE
>contribution to the original discussion.

And what exactly have you contributed besides getting everyone mad at you? Perhaps if you would listen to those people who are 'whining about your "style"' then you might get somewhere. What good do sarcastic comments like the 'gushing roses' one above do for your argument? How does the saying go? You catch more flies with honey than with vinegar?

>So, Jason... why haven't YOU contributed anything to the discussion..?

Why? Basically because it's a pointless discussion... I'm happy with my computer (Falcon) and the current level of support. Evidently Atari has a new baby now (The Jaguar) and I don't really blame them for putting the Falcon on hold for a while. Success of the Jag may or may not result in more time/money being put towards the Falcon. Either way it affects me very little.

I do know that it doesn't do any good to try and stir up trouble. So what if some people may have an over jaded view of Atari. It certainly does not hurt anyone. There's probably alot more people in this world who have an over-negative view of Atari then those who are a little to positive over the current situation. Perhaps if people would give Atari a chance for once without blasting ever move that they make they might get somewhere.

You want to know how I feel the Atari Market has changed over the last 6 years? Fine... Obviously the situation now sucks compared to 6 years ago. When I got my first ST in 1986 there were several dealers in my town. Now there are none. However, considering that Atari (and Commodore) have managed to survive up until now against a Juggernaut like the PC market then perhaps we should give them a little credit. People who do not have PC compatible machines are bucking the system and they should realize the consequences of doing so. Some people (like myself) get along just fine using an Atari even in the current state of the Atari market. If you accept the fact that Atari will most likely never hold a signifigant of the mainstream PC market then it might be a bit easier to own one. I don't know what anyone else on this net uses thier computer for so I can't very well pass judgment on whether or not they should be happy with an Atari.

Oh no. The atari drive can read MSDOS DD(!!) formatted disks! And TOS has absolutely no problems. (If you have an Atari with a HD-Floppy (e.g. Falcon) yor Atari reads MSDOS HDs as well.)

Ciao,
Carsten

164. nethack GEM 3.1.3

Newsgroup: comp.sys.atari.st
Date: 1993-10-04 09:35:07 UTC
From: dominik@d255s228.sni.de
Message-ID: <CED9Ao.3KI@snimucgw.stm.mchp.sni.de>
Source record: 200135

I downloaded nh313gem.zoo from atari.archive but I can't get it to run on my ST (3 MB yes, correct 3 MB RAM) TOS 1.04, even if I don't boot any accs or auto folder progs. I get an addressing exception very early in startup, even before anything shows up upon the screen. The first problems I had were config errors in nethack.cfg, which gave bus errors when the paths for DATA and SAVE weren't correct and the .RSC file couldn't be found. But I overcame these probs.

The addressing error doesn't vanish. Anybody out there who knows a solution. The error occurs in all ST resolutions (high, medium, low).

Thanx
Dominik

For all you enthusiastic Falcon'030 User's, Lexicor SOftware is now distributing the BLow Up'030 from the German Acher & Eberl & Seibert GbR.

(Only North AMerica)

It's basically available in 3 versions..Software, Hardware I and Hardware II. It has received excellent reviews in the past eg. ST Magazine and is an excellent addition to your falcon to expand it's screen.

Prices start as low as 24.99 U$D for the Software version which alone can go upto 896 x 544 non-interlaced with 53.4 Hz upto 256 Colors or in the TC mode upto 448 x 544...in the software version only. Upgrade possible from Software to Hardware versions costing 74.99 U$D for the Hardware I version and 99.95 for the Hardware II versions. Go as high as 1280x1024 or get virtual resolutions upto over 5000x5000!

Blow Up'030 Falcon Screen Expander!! By Lexicor (510) 848-7621

Ok! enough hype! it's great though...for more info at inet email:

Lexicor@world.std.com to get more info on this new and very able Falcon Screen Expander!

Sincerely

Hi!

There are many ways to set a new AES-Font:

a) as GDOS-Font for each GDOS-supporting-applikation
b) as systemfont with NVDI
c) with SETFONT from the Mortimer-set (OMIKRON, GERMANY)
d) some PDs
e) as AES-Font with MultiTOS or TOS >=4.01

I cannot think of any method of doing this. Except, if you have
NVDI, you can do that by placing an "s" in the first column of
the assign.sys file where you install the font.

>an illegal copy for the sake of Justice. (no smiley)

Hey Annius, if you think the price is too high, than just use another program. And if you think that other programs are not good enough for you, then they obviously have a reason for asking such a price haven't they?
If they were asking more than necessary obviously you have a great market opportunity there. No really, if you are a professional musician you would have the money for the program. You don't suppose professional musicians use a $200 synth either do you? A $5,000,000 company doesn't use a $50 program for their financial administration, but they use a program which costs more, a lot more, but has excellent support and is very very complete. The same way if you need Notator Logic, buy it. If you don't buy something else.

Erlend.

This is something I have found a little questionable lately. With
most of my setups, I'd agree that MiNT and Warp9 (3.75) don't like each
other. However, at least one of the configurations I use it seems
to work together. I'll have to see how I have that set up (I can't
recall if I load Warp 9 in before or after MiNT 1.08, however)...

Oh well, good programs both...

Perhaps your "set prompt=..." statement is in an "if" clause which is never touched? ... Anyway, that's not enough information to begin with. What's the exact statement you try to set the prompt with? (What version of `tcsh' do you use?

> - somewhere in the readme of TCSH is stated that cursor up is or can be mapped
> to previous command (CRTL-L). How?

If your /etc/termcap is correct, `tcsh' will map the cursor up/down keys to the up-history/down-history commands at startup. If that doesn't work for you, try the following:

```
bindkey '^[A' up-history
bindkey '^[B' down-history
```

The TT is no longer being manufactured, unfortunately. Your best bet is to try to find one used, but they are in demand so look hard.

>The Mega STe is not worth the cost for the increase in performance, ...

Well, I wouldn't be so sure. The MSTE is no longer being manufactured either so you have to buy used and you can find some very good deals on complete systems from time to time. I've seen MSTE 4/50 systems with both monitors, modem, software and other stuff for as low as $750. Ain't a bad price and the MSTE is a sweet little machine, IMHO.

>and I'm not sure about the Falcon

Why not? It's just a 'super' ST, if you will. The TT has more raw computing power available but the Falcon is a great consumer machine. All depends on what you need it for, right?

Good luck shopping!

>Hey Annius, if you think the price is too high, than just use another
>program. And if you think that other programs are not good enough for
>you, then they obviously have a reason for asking such a price haven't
>they?

Well I can see Annius' point here. This software is in the highest price bracket and I wonder just how realistic these prices are. I know that huge quantities of time and effort have gone into creating these programs but I also know that there is a hell of alot of people using them. In Australia, Atari computers are still very popular in home and semi-pro studios, they have certainly lost it as far as the professional market goes (perhaps the Falcon could change that). It is now quite easy to run $900 software on a $300 computer (used 1040ST). In fact if you want software with any power at all you have to spend big money. Is this cost really set by the market? With only two main players (Emagic and Steinberg) it is easy to have an artificially inflated price. Take the prices for Emagic software in Australia at the moment:

Creator $499 (was $699 last year)
Notator $799 (was $1099 last year)
Notator Logic $1300
upgrade from Notator to Logic $679 (!!!??)
upgrade from Creator to Notator $399

So let's say that, like me, you bought Creator in the late '80s and upgraded to Notator some time later. Creator cost around $600 (easy), ugrade costs $400 that's $1000 so far. Now if you want to go to Notator Logic you're up to $1700 dollars. Is this realistic? Well it's well beyond the budget of alot of home studios, that's for sure. Prices for Cubase and Cubase Audio are, and I think have always been, slightly lower. It was only recently that the prices for this type of software dropped as economic times got tougher and the market really did influence prices.

>If they were asking more than necessary obviously you have a great
>market opportunity there. No really, if you are a professional musician
>you would have the money for the program. You don't suppose professional
>musicians use a $200 synth either do you?

As I said before, the pro market (yes, that includes musicians) has
really gone to the mac here and I suspect elsewhere as well.

176. Re: fax software

Newsgroup: comp.sys.atari.st
Date: 1993-10-04 14:10:56 UTC
From: garth@splunge.uucp
Message-ID: <1993Oct4.141056.327@splunge.uucp>
Source record: 199902

I use STraight FAX! from Toad Computers in the USA (they're the official distributors of STraight FAX!). The programmer of STraight FAX! recently announced an upgrade to version 2, which amongst other things will now support Group One fax modems/protocols.

Putting the Supra FAXModem v.32bis/v.42 together with STraight FAX! has been one of the best things I ever did with my Mega STe, besides getting Calamus SL for it. And there's good support for STraight FAX! on GEnie and CompuServe, too -- oftentimes, the original author of the software will answer your questions, and if there's anything about FAXmodems that he *doesn't* know, I'm not aware of it.

Version 2's more costly than version 1.07 (around $100.00 US), but it's worth it. The programming is solid and elegant, the interface is easy to use, and I've sent and received hundreds of FAXes with it and have been extremely pleased with the results. The FAXes I send to clients almost look as good as laser output, because it's direct-from-digital (no scanning artifacts to leave "mouse droppings" all over the FAX). Buy STraight FAX! -- you won't regret it. Toad Computers can be reached at:

556 Balt. Annap. Blvd.
Severna Park, MD 21146-3818
USA
Tel: 1-410-544-6943

They also have a 1-800 number for orders only, but I don't use it, since it doesn't work outside of the USA (I'm in Canada).

Regards,
Garth

Dear friends,

Thanx to all the people who answered my query about Unix Windows.

It was quite amusing to see how my original question, in the process of being answered, became a topic of discussion about implementing X on the ST.

I read somewhere (I think something like a Dr Dobbs journal thing on X windows) a few weeks ago......well did not read, but scanned while in a newsagents. I gathered something about how Motif was very successful, and so, it would be released into the public domain. Now, I do not claim this to be true. It is only the impression I got when I scanned the mag. I could not read the whole article.

If this is true, then does that mean that the source code will be available, and so can be ported over to the Atari ST? OK, maybe not the full blown version, but maybe just a smaller version?

These are just my thoughts. I am new to programming and am starting with C. OK, not new to programming, but the first language I learnt over the past year was Prolog, but it is totally different to C and such. I would love to learn how to port software. All I can do for now is be patient and carry on learning ;-)

Again, Thanks to all those people who replied, either directly to me, or through this newsgroup.

-Danny.

Discredit anyone..? What gives you that idea..?

You're right, my reply to Kendall was a bit rude.. but he's not the
first to have demonstrated that he has NOT read what I've posted, nor
followed the thread, yet he feels qualified to tell me that since I said
I don't own an Atari, I shouldn't have an opinion.

No, I said that someone who was not an ST owner would have a difficult
time judging the ST market.

I never said that.

???

The first person, who originally posted the first question in this thread
said that *THEY* used to own an Atari ST six years ago.

I've *already* posted in this thread that I own, and like, an Atari ST.

But I'm pretty sure that the message I replied to said you were a
former ST owner... At least that's what I thought at the time.

So, if you can't follow the discussion, why not refrain from criticising
ANYONE, ok..?

I never did, I just laid out how I saw the ST software base.

With the exception of two very good posts about the state of Falcon support
in the United Kingdom, about all I've seen in this "discussion" is a lot
of people whining that they don't like my "style", or they can't bear to
hear anyone say anything that's not gushing roses for Atari.. VERY LITTLE
contribution to the original discussion.

Gee, I never did that, I thought my post had some substance - that the
overall software availiable fot the ST line is much better than what
we had 6 years ago. Is that not relavant to the discussion?

There are several programs to change the system-default VDI-font.
Unfortunatly some applications are ignoring system-settings (example:
the original Atari Desktop - at least my version).
Try some prgs like 'font', 'switchfont' or 'vdi_font'. They are
available via ftp from ftp.tu-clausthal.de (139.174.2.10)
/pub/atari/graphics/fonts/* or via email from 'mail-server@ftp.tu-clausthal.de'

Bye,
Wolfgang.

Does WINX(whatever version) work with MTOS? Does it still require
GEMRAM or does it just use the *.sys files?

BTW, I've heard this and that about WINX, but just what are the
advantages to having WINX in a MTOS environment (I already have as many
windows as I want, etc.).

>The error occurs in all ST resolutions (high, medium, low).

Not exactly a solution, but that version won't run on normal ST graphics
modes; it requires at least a 640x400 color mode to be playable, according
to one of the README files. I deleted it without trying it, as the file
was quite clear about STmed or STlow being inadequate.

Atari/Bob Brodie has been saying for several months that the TT has not been cancelled and have ordered another production run. I don't know the current status of the order.

Maybe you have news that's more recent? Considering that one of the Jaguar development systems is a TT, the "reopening the TT production line" announcement didn't surprise me......especially since they've said all along they would eventually make more.

Coleco pulled an amazingly Tramiel-like move a number of years back, at
the height of the Cabbage Patch Kid craze (remember when moms were
fighting over the things in toy stores?)... they essentially dropped
everything else in favour of concentrating on this market, which dried
up _real_ quick. They're still trying to recover from the fall.

Shrunk somewhat?!? Evaporated would be a better description. In this
area, there used to be quite a few Atari dealers; now you have to drive
at least 45 minutes to get close to one dealer.

> However, I would say that the software base is stronger than it was 6

> The DTP software is just getting better (Calumus SL is amazing, and
> Pagestream 2.2 is pretty nice - I just wish they'd come out with a new
> version...). Music software is continiously improving, and I think

SoftLogik has abandoned PageStream on the Atari platform; 2.2 is the
last version. They're developing it for the Amiga only now.

> the best of any platform. Programming wise, I still prefer my Atari
> over most anything else (and I have extensive programming experience
> on Suns and PC's). And for word processors, well there are so many

I wouldn't program on a PC if you twisted my arm _really_ hard; an 'OS'
that requires the programmer to use "__near" and "__far" pointers, and
worry about "memory models" and whatnot is bad news.

> choices I won't even go into them here... (I really like Atariworks so
> far though... it has the first spelling checker I like as much as

IMHO, most Atari word processors could use a lot of improvement; I
haven't found a good one yet. That's why I use uEMACS. :-)

> WordPerfect's). For almost any software category, equivilent software
> exists on the ST that are on the same level as the stuff on other
> platforms.

I don't think there's anything that even comes close to Mathematica or
Maple. That pretty much locks engineering students, math students, and
science students out of the ST/TT/Falcon market.

> Now you say that you are a FORMER Atari owner. Pretty shaky ground to
> be commenting on the state of software or support, don't you think?

BobR's a _continuing_ Atari owner; he owns and uses an Atari computer.
Like me, he doesn't like people trying to convince the innocent that the
Atari market is in an 'Ok' state. It's very, very sick, and doesn't
seem to be getting any better (that's not to say that it's getting
worse; it's been like this for at least three years now).

So, when's Atari going to release a 68040 machine? Or maybe a PPC601 machine? :-\ If I'm going to spend some $$$ I want a decent amount of power and some decent graphics; I'm one of those mutants that could care less about sound (my volume is always turned off so I can listen to the CD player) or MIDI (my MIDI ports are practically virgins).

^^^^^^^^^^^^^^^^^^^

Hey, that's a great analogy Hutch!

> I freely admit I LIKE Atari computers. But hey, I also like (and own) a Mac
> and pc, as well. So sue me. :)

The fundamental problem in this merry flamefest is that Bob _LIKES_ his
Atari; otherwise he would't use it, and he would't post to/read this
newsgroup. The same goes for me as well. We're not about to put up
with the _complacency_ that has allowed Atari to get into the bad, bad
position that it's in now; we want people to wake up and _tell_ Atari
how annoyed we are at their:

a) pathetic marketing
b) lying to the developers/users (remember when the Falcon had a
32-bit bus and FSM-GDOS was delayed due to 'packaging' problems?)
c) producing crippled computers and running around calling them
ground-breaking, state-of-the-art, etc (gee, that's a nice
Falcon030sx they gave us; too bad the DSP is next to useless most
of the time)
d) pathetic documentation
e) pathetic ergonomics (I'm surprised I don't have carpal tunnel
syndrome from this keyboard yet)
f) etc, etc

IMHO, it's not _fair_ to paint a rosey picture of the Atari world to
people who aren't familiar with it, especially when they're considering
dropping $2000 to enter it (which, IMHO, is like jumping with no parachute).

> OK, "The Atari market today is worse than it was six years ago, Atari
> dealers are harder to find and there are fewer software titles available."
> Hey, now _that's_ some ground breaking news, eh? But I _still_ might
> recommend a Falcon purchase to someone if I thought it best for their needs.

This _was_ news to the original poster though; too many people were
pulling punches for Bob's liking. ;-)

Hello,

I've been using INTERLINK for some time and am very pleased with it.
EXCEPT for one major problem! When I use the on-line editor at the
University of Washington - pine - I get these characters at the beginning
of each line.
]K>So that each line
]K>begins with characters
]K>that look like this.

I assume that this is due to faulty terminal emulation (vt100). Does
anyone know if a third party has written a better terminal emulation for
INTERLINK.

Thanks in advance

Tony

Does anyone know of a well-behaved BBS program?

Be "well-behaved", I mean that it doesn't do anything bizarre to the screen (just text output, nothing weird), doesn't hog the system, doesn't access the disk erratically, etc, etc... You know, something suitable for use in a TOSWIN window.

Not that I'm planning to start a BBS right now; it'd be quite annoying on a machine with only one serial port.

With maybe a dozen fonts active, it takes every GDOS program I load a
long time to come up. I have no idea what it's doing, but it
definitely spins the disk a lot. After that, the only wait is for
rendering the onscreen fonts, which is pretty good.

We're talking wait 5-10 _minutes_ if you have 15 or so fonts active.
JUST TO LOAD A GDOS PROGRAM.

> fonts even?? Grow up, 99.99% of all users don't need half of the amount of
> fonts available...

Yah, I guess I should grow up and only use Times Roman for everything.
No, wait! I should use _Courier_ for everything, since it's the
ultimate font!

Give me a break. People involved in graphic design _need_ lots of
fonts, even if they don't use them all. To your Times may look the same
as Bookman, but they're not; there are situations where you'll want to
use one and not the other.

How much would it _cost_ to collect .5k of Speedo fonts? It cost me
$50US to collect that many type-1 fonts; the ShareWare fonts shall
languish in their unpaid-for state until I use them for something.

That was much better, Jason... now if only everyone who's spent the last week or more criticizing my answer would have just posted their own feelings, we wouldn't have ended up wasting all this time and energy.

Unfortunately, your other comments indicate that you never even read my original answer to the original question.

THAT'S the part I object to. The "you" in "why not refrain from criticizing if you haven't followed the discussion" was intended to be generic.

My original answer to the question of whether Atari support had improved in the past six years was very carefully worded to AVOID pushing anyone's buttons. It was a brief and to the point statement of MY point of view.

(As I've already mentioned, I should have added, "in the U.S.)

There was nothing "over-negative" or "sarcastic" at all, and yet the whiners had to attack my answer instead of giving one of their own.

As for "giving Atari a chance", I think I'll pass on that one..

It would only spark another several weeks of this kind of stuff.

BobR

208. UPLOAD: New version of GEM++ - version 1.7

Newsgroup: comp.sys.atari.st
Date: 1993-10-05 01:32:13 UTC
From: warwick@cs.uq.oz.au
Message-ID: <15765@uqcspe.cs.uq.oz.au>
Source record: 200080

A new version of GEM++ has been uploaded to atari.archive.umich.edu
This is version 1.7, and so the file is "gem++17.zoo". It should appear
in the /atari/Programming directory shortly.

NEW TO GEM 1.7 SINCE GEM++ 1.5:

- Flying dialog boxes (both opaque and transparent) (thanks Markus Gutschke)
- GEMactivity::OneDo(int eventmask) - for more powerful event handling
- Hotforms passe more unprocessed keys to DoKey() (esp. arrow keys).
- ForeCol(), BackCol(), BorderCol(), FillPattern() etc methods for GEMobject.
- SetText() and other GEMobject methods debugged.
- GEMobject::SetWidth/SetHeight, "rubberness" added to GEMformwindow.
(this allows self-resizing objects)
- Window colour (TOS >= 2.0) now supported. Thanks Waldi of Nederland!
- Automatic delay on sliders (still needs work - user configurability)
- Conform to further changes to VDI bindings.
- Slider increments and timer delays are user configurable.
- Window slider increments are user configurable.
- Example program updated to demonstrate Flying and Window Colours.
- Bug fixes. Expecially GEMobject attributes (Text(), etc).

For those not familiar with GEM++, here is the introduction manual page:

GEM++ - C++ LIBRARIES FOR GEM/AES/VDI

NAME
GEM++ - C++ Libraries for GEM/AES/VDI

DESCRIPTION
The GEM++ library is a collection of C++ classes that give an
object oriented interface to the GEM environment.

CLASS HIERARCHY
FILE CLASS : BASE DESCRIPTION
-------- -------------------- ---------------------------------------
gemap GEMapplication - One for every program.
gemda GEMdeskaccessory
: GEMapplication - One for every desk accessory.

gemr GEMrsc - Loads and frees RSC files.
gema GEMactivity - A user interaction - the main loop.
geme GEMevent - A GEMactivity generates these.
gemfb GEMfeedback - The result of GEMevent processing.
gemks GEMkeysink - Key event consumer in a GEMactivity.
gemt GEMtimer - Timer event consumer in a GEMactivity.

```
gemw GEMwindow - Standard GEM windows.
gemf GEMform - Standard GEM forms / dialog boxes.
gemm GEMmenu
: GEMform - Standard GEM menus are forms.
gemhf GEMhotform
: GEMform - A GEMform that with extra features.
gemfw GEMformwindow
: GEMwindow, GEMform - A GEMform in a GEMwindow.
gemfiw GEMformiconwindow
: GEMformwindow - Iconifiable GEMformwindow.
gemd GEMdesktop
: GEMformwindow - Standard GEM desktops are forms.

img IMG - Standard GEM image format.

vdi VDI - Standard GEM vdi calls.

gemrawo GEMrawobject - GEMforms are made up of these.
gemo GEMobject - Extensible layer on GEMrawobject.
gemsl GEMslider
: GEMobject - A slider extension.
gemto GEMtextobject
: GEMobject - A text extension.
gemimgo GEMimageobject
: GEMobject, IMG - An extension that displays an IMG.
gemuo GEMuserobject
: GEMobject - Extension with user defined graphics.
gemvo GEMvdiobject
: GEMuserobject - User graphics drawn using a VDI.

gemal GEMalert - Standard GEM alert boxes.
gemfs GEMfileselector - Standard GEM file selector.

gemsb GEMstreambuf
: streambuf - Interprocess communication.
gemrec GEMrecorder - Records GEM events.

USAGE
To use GEM++ with the GNU C++ compiler (G++), add the path of the
GEM++ #include files to the GXXINC environment variable.

Before the library can be used, it needs to be built (unless it
is already in compiled form when you receive it). To build the
library, edit the makefile in the src directory to indicate your
set-up (it should be just a matter of setting $LIBRARY and $INC),
then type "make" in the source directory (this assumes you have
a default.mak consistent with the one that comes with GEM++).
If you do not use make (but you really should!), you can type:

gcc -I../include -O2 *.cc
gnu-ar r ../lib/gem++.olb *.o
gnu-ar s ../lib/gem++.olb
```

EXAMPLES
See the "example" directory for a program that uses GEM++.

FILES
include/*.h - Header files for GEM++
src/*.cc - C++ sources
man/*.man - ASCII documentation
example/* - Example program

>If I remember correctly, Bitstream has more than 1000 fonts ready for
>purchase, which will all work fine on SpeedoGDOS.

Okay, I just picked up SpeedoGDOS a few weeks back, and I like it. I would like to buy more fonts, whether from Atari, Bitstream, third-party IBM PC vendors, shareware, whatever.

What I want to know is -- how can I tell what fonts will work with Speedo? I figure I should be looking for some phrase in ads like "Bitstream Outline Font Class XD" or whatever...Someone care to tell me what I need to spot?

Thanks in advance,

For Sale:

My roommate is selling his Panasonic KX-P1124 24-pin, dot matrix printer, so he can get a laser printer. This thing is in pristine condition, with manual, and we think the original box too (the box is in a friend's garage, so we have to look for it).

He's asking $150 plus shipping.

Please send me mail if interested, and I'll pass it onto him. Thanks!

217. Geneva: A Review

Newsgroup: comp.sys.atari.st
Date: 1993-10-05 03:04:02 UTC
From: phruby@ucrengr.ucr.edu
Message-ID: <28qo72$pa4@galaxy.ucr.edu>
Source record: 200088

Review of Gribnif Software's
Geneva: Multitasking Application Environment
by Paul Hruby October 4, 1993
phruby@ucrengr.ucr.edu

Geneva is a multitasking environment, similar to Multi-TOS, for
the Atari ST/STe/TT/Falcon computers. Some of its features include:

- Cooperative multitasking w/ special handling of problem programs.
- A more compatiable and fast multitasking OS than MTOS.
- An updated AES simular to the Falcon's TOS 4.
- A desk accessory taskmanager
- On-line help
- TOS programs can run in a window on the desktop.
- A much improved item selector

Geneva is easy to set up. All is needed is about 300K of free
disk space. It can be booted off a floppy but a hard drive is the
best way. Geneva will run with as little as 512K but some programs
will not have enough memory to run. Geneva takes up about 150K. This
is pretty amazing considering how much Windows 3.1 takes up. Installation
is done with a install program. It automatically places files in their
correct locations.

Geneva can run without a shell program. Built in is Geneva's
Executive menu. This is always available when Geneva is in memory. It
consists of Geneva's new item selector. The item selector is similar to
Universal Item Selector III and other item selectors. It has features
such as program launching, copy, move, delete, new folder, file info,
find and on-line help is available.

Geneva can be made to run a shell program after booting. Any
MiNT shell can be used as well as MiNTs other tools. Hotwire and NeoDesk 3
can also be used as Geneva's shell. Included are patch programs to update
NeoDesk 3.0x to 3.04. Also NeoCLI much be patched to version 2.2 inorder
to run under Geneva. To my knowledge, there is no way to use the default
GEM desktop as the shell.

When Geneva boots, it reads a file called GEM.CNF. This file is
much like config.sys or autoexec.bat in a MS-DOS machine. Environmental
settings such as path, accessory path, gem & tos extentions, special
program environment variables are all stored here. Programs can be run
before the main shell is loaded. The manual shows an example of running
1stview to read Aladdin messages before the main shell is run. Finally,
the shell path is placed here.

Geneva operates simular to MTOS. Under the far left menu bar option (DESK), the menu is separated into three sections. The first shows the About program option. The next section shows the programs that are currently running in memory. A check mark shows the active active program. A program running in single-tasking mode is listed in small type, while programs that are "sleeping" are in italic. Programs can be switched between by clicking on it in the menu or by clicking on one of it's windows. The process is just like Multi-finder on the Macintosh. Finally, the third section of this menu shows loaded desk accessories. There is no longer a limit to the number of DAs that can be active in memory. The only restraints are memory and compatibility.

Geneva features a task manager program called Taskman. This program can be either a DA or a program. Taskman allows instant switching from one program to another. Programs can be launched, put to sleep and terminated from this DA. The Taskman can be used to set up program parameters (flags) every time a certain program is run. One could limit memory a program uses, limit window handles, multitask or not, clear allocated memory, redraw after exiting, special object types, use AES 4.0 extended messages or not and other flags. This lets Geneva be customized to handle programs that might not work under other multitasking environments.

The Taskman also has options for the keyboard, windows, dialogs, video modes and other options. Keyboard equivalents can be used for various functions. Windows can have special fonts, font sizes and gadget width & height can be modified. TOS versions below 2.05 can now use the window color CPX from the control panel. Dialog boxes can have multicolor buttons. Buttons or boxes can have outlines, shadows, rounded, patterned or even in 3D. Resolution can be easily changed through the Taskman. ST Low, Medium, High and TT Low, Medium, High are available. Miscellaneous options include whether to use pulldown menus, tear-away menus, dialog insert mode active, alerts follow mouse, grow/shrink boxes, window gadget repeat delay and others. Finally, Taskman has on-line help for all of its options.

The on-line help is always accessable by pressing the Help key. When actived, the help brings up a window with the appropriate manual pages. Other help files can be open through the window's own menu bar. Text can be blocked to the clipboard for later or saved. The help window has an option to search for a topic or brings up an index of topics. Font size can also be changed. On-line help also has Hypertext links. This allows one to select a word or phrase and help will display help on that subject.

Geneva allows TOS and TTP programs to execute in their own window. The TOS window menu bar has such options as open a program, copy output to file or take input from a file. Output can be copied to the clipboard or saved as text. Blocks can also be saved. As with the on-line help, one can set fonts, and scrollback over output. Help is, of course, available.

Finally, Geneva's manual includes more than fifty pages of programming instructions and examples. It shows how to take advantage of AES features like 3D buttons, tear-off menus, window management, dialog boxes, sliders, mouse shapes, multitasking calls and on-line help. On disk, there are programming examples of the above. Gribnif included a small program that lets Mouse-ka-mania shapes be used as mouse shapes. The AES also allows for animated mouse shapes.

Geneva is, in my option, the best multitasking environment for Atari computers. It blows MTOS out of the water with its speed, compatibilty and updated AES. The AES is now much like TOS 4 on the Falcon. Geneva is suppost to be 100% compatiable with MTOS-specific programs and even runs programs that MTOS doesn't. (ie. Warp 9 v.3.75)

I have not found any major bugs in Geneva. A minor bug is icon movement under NeoDesk 3.04 only moves half the icon. The icon is fine when the screen is redrawn. This is alittle anoying. It only happens in color ST Low & Medium resolutions. Gribnif has a bug fix (available sometime this week) that fixes it and brings Geneva from version .95beta to 1.01. I highly recommend Geneva. It is fast and small. Geneva is the only way a non-Falcon ST/STe/TT can have a Falcon like desktop. The price is not cheap ($99 US) while MTOS is selling for $49 US but I think the extra features and compatibility Geneva offers more than makes up for the price. Quite a program!

218. AES/EBU interface?

Newsgroup: comp.sys.atari.st
Date: 1993-10-05 03:32:37 UTC
From: rosenkra@convex.com
Message-ID: <1993Oct5.033237.28714@convex.com>
Source record: 200090

does there exist an AES/EBU (or even S/PDIF) interface for any atari system (ST, STe, TT, falcon)? also is there any software to drive this, assuming such an interface exists? i'd want to both read from and write to devices like DAT (audio). as far as i know AES/EBU uses balanced XLR connections. i'd prefer both 48k and 44.1k rates, if that matters on the interface.

if not atari, are there interfaces for PC's?

thanx. pls respond by email if possible. i'll summarize responses.

219. Calamus Workstation For Sale

Newsgroup: comp.sys.atari.st
Date: 1993-10-05 04:56:19 UTC
From: bmaraldo@watserv1.uwaterloo.ca
Message-ID: <CEEr1w.p6@watserv1.uwaterloo.ca>
Source record: 200091

With all the discussion about Calamus going on, I thought I would
repost my for sale ad but directed more at Calamus. I have used this system
as a Calamus workstation for about a year and before that other atari hardware
and Calamus. THis mega system I am selling works very well for Calamus; here
goes...

I am selling my Mega ST4 system which includes the main cpu, keyboard
ad mouse, internal DS drive and external 115M hard disk. The system also
includes a 2400/9600 data/fax modem and STraight Fax software. Optionally, I
am also selling my Spectre GCR which will run most mac software in a slightly
accelerated mac plus mode (I run QuarkXpress and Adobe Illustrator - on the
atari!). Software (legal copies with original disks and docs) include Calamus
1.09N (I tried SL ansd didn't like it), the Calamus Font Editor and Outline
Art as well as Word Writer, Tempus II and other utilities.
The hard disk will come with Calamus and the other s/w mentioned
installed and ready to run. I will also include a complete working distribution
of Tex and Metafont. Calamus will come with many fonts.
All this works as a system: I frequently boot in Mac mode and work on
my text in Microsoft Word (miles ahead of any atari word processor) then
export the work as a text file. I reboot in atari mode and use the gcr
utility to transfer the mac text file into an atari-useable form. This gets
imported into a Calamus doc and printed or printed to a fax file which I then
fax out using STraight fax. This is how I did a rush-resume and ended up with
a job the next day! They commented on my nice looking fax at the interview.
This system isn't a bunch of stuff thrown together on the hard disk.
Instead it is a fully integrated system that works seamlessly from application
to application. I finally get an atari software/hardware environment that
supports power-use and now I am selling it! :-) I will keep my lowlier atari
system for music, but for the kind of dtp I need I have to go to mac.
The system is for sale for $300US for both the cpu and drive, $200US
for spectre, and $250US for *all* the software (ask for the complete list).
As for monitors, I haven't decided if I am going to sell it with a mono or
colour monitor. Probably mono. That would be another $100US or so.
I will take $1100US for the complete system. I don't mind selling it in bits.
These prices are quite firm. If you buy the whole sha-bang you will have quite
a powerful little system - I have discovered that atari hardware benifits
greatly from the software run on it and how that software is organized.
[I forgot the fax modem and s/w: as a set add $150US - the s/w is legal and the
registration card is fully intact].

brett maraldo

BELOW is a detailed list of the components:

Atari Mega ST4 300US
ICD 115M hard disk 300US
Practical Peripherals PM2400fx96 fax modem 90US great with STraight FAX
Atari SM125 mono monitor 80US either this...
Atari SM1224 colour monitor 120US ...or this
Spectre GCR w/ROMS and s/w 200US w/ software [ready to run]

MichTron Mi-Term $5
MicgTron Hyperfont $7
Neocept Fontz $5
Intersect Revolver $7 I am not going to sell individual
Ditek Masterplan $20 software titles. Instead I will
SOftlab Oscar $5 put a minimum order of $50US on
Looking Glass Alice Pascal $20 this. All titles include the
Kuma K-Roget $20 master disks and original manuals.
Ditek Calamus 1.09N $100
Ditek Calmus Font Editor $35
TImeworks Word WriterST $20
Michtron Tempus II $15
VIP Professional $10
Batteries Included Degas Elite $5
NewStar STraight FAX $70
Prentic-Hall MINIX 1.5 $40
Mark Williams C 3.0.9 with csd $40
Total of Software 400US
Total of System $1490US

M>in my AUTO folder or something to change the system font?
Yes. Two possibilities: Use NVDI (commercial) or use VDI-FONT (freeware)
made by Harald Sommerfeldt. NVDI enhances also the speed of your ATARI's
graphics output. (it's great!)
Both programs were designed in germany.

222. Re: Is CALAMUS ok? What Versions

Newsgroup: comp.sys.atari.st
Date: 1993-10-05 08:45:40 UTC
From: jhelling@cs.ruu.nl
Message-ID: <CEF1o6.6oC@cs.ruu.nl>
Source record: 200095

One problem with Calamus is that they use their own propriary font format, which include a complicated licensing scheme including registrating serial numbers. Whenever you want to upgrade to a new version of Calamus, its serial number changes, and you are forced to buy the whole set of fonts again -- as sombody I know working with Calamus was told by his dealer. Fortunately, the protection scheme, and the propriery format has been puzzled out.

A further problem with the Calamus fonts is that they do not support hinting, which makes the appearance of small letters at low resolutions not at all as good as professionally hinted fonts.

My comments are based on a one year old version of Calamus, and I don't whether the latest versions have removed those faults...

Source record: 199907

Well, I have a Falcon030 as well... it is an INCREDIBLE machine, really impressed my IBM friends (seeing as how I was just about to buy a 486DX2-66 when I came across a local Atari Dealer).

The only thing I dislike about it so far is: 1) the internal speaker
2) the lack of information about it (what does it do!?!)
3) lack of software (when you buy the non-HD model).

So far I have messed up the NVRAM (causing the system to boot in German with a Dutch keyboard), I have crashed about 75% or more of my software on it, and I have been desperatly trying to find software for the system.

The only thing I really get peeved about (on a regular basis) is that alot of the software will ONLY run on a TV (I payed alot of money for a monitor thinking it would give me the BEST picture/resolution and compatibility), and even on my TV (JVC 21"), most the wares wont display properly... seems they wrap off the bottom back to the top. (and there's no way to adjust the TV)... sigh

Grin... I guess what started out a praise may have been turned around, but I really DO love my Falcon, and wouldnt trade it for any other syste m currently on the market. I just wish more people had them, so the software flow would pick up, and Atari could make a come back.

By the way, is there any way you could MAIL me some disks in return for the shipping fee/disk fee?

I need some software.

Grin

I seem to have problems running STe demos (I collect demos). Alot of my games wont even get past the booting phase. I wish I had a HD so running Backward was easier... How does Devpak run on the Falcon, what version are you using... I am just getting back into computers (left for about 2 years... sold all my Atari stuff and did other things), I decided I wanted to get back into it and purchased my Falcon. It's nice but I have about 20 screens of questions for the first person willing to answer. :)

For the moment there really aren`t anything you can do with Logic (v1.5)
that can`t be done with the SL-version (except e.g. some very handy
highlevel operations or setting up different environments which is very
nice). But the 2.0 version is supposed to be out around christmas and that
version will defenately mean goodbye to SL, because all the SL-options
will be included on top of all the new, great features of Logic.
Logic is in all a much more intuitive program and the minute all of the
SL-functions are implemented, there`s absolutely no reason to stick with
the old one. You could check out the Mac 1.6 version if you want an
impression of what you can expect.

|>
|> Bye
|> Stefan
|>
|> ===
|> Stefan_Damerau@sl.maus.de

I received my Gemulator this weekend, so the following statements are somehow
prelimenary.
My configuration is an ISA 486 DX2/66 with 16MB RAM and an ET4000 card.
Regarding speed the subjective impression is that the speed is in average twice
to three times that of an original 8MHz ST. Nevertheless there are some graphic
operations which are indeed slow, for examle filling.
But most important from my point of view: You can really WORK with Gemulator!
Compatibilty is good, the only program so far reminding me of the good ol' bombs
(remember the atomic type?) is Signum 2. The european distributor told me that
Signum 3 should run. And I can add some programs to the list of compatibility:
Script, Tempus Word, old GfA-Basic V1 and V2 programs... - at least in 640*400
mono mode. If the programs support different screen resolutions you can get a
resolution up to 800*600 with the most common SVGA-cards.
And in all these modes the speed is sufficient for work! Even more, for me,
faithful user of an 8MHz 1985 ST until this summer, there is a speed increase
in every program I use!
And I should mention that the Gemultor works fine under OS/2 2.1, though I
havn't figured out how to have it run in a DOS-Window. So now I always have
to switch the screens to have access to other programs.
But I would agree with Stefan in so far as that a 486SX25 is the minimum you
should consider as a working platform.
As a resumee I'd say that if you already have decided to go into the PC-world,
found out that a TT was no alternative and want to rescue the programs which
you are used to and which you already paid for (except of course for MIDI and
maybe games - don't have any, so I can't say anything about compatability)
- in this case I'd recommend the Gemulator with hardly any restriction.

So long Martin

>Well - here's a word of warning to those of you who are using extended screen modes
>on your falcons - 800*600 has just blown the video chip in mine...bye bye :(

Well, it's certainly not sure if this has anything to do with this
extended screen (although my Falcon's graphics chip died a while ago, too).

But it's really a problem that noone knows for which clock rates the
chip really is made for. ATARi never claimed it can be used at more than
the internal 25 or 32 MHz. So it's something like these overpowerd 486
PCs that are running on a much too high frequency...

The stats are real. But they're not as bad as that. Also, NVDI works very
well on the Gemulator, even better than on an ST.

>choice.

What not much choice. I am almost completely ignorant when MIDI is
conecerned, but even I have heard of Dr. T.'s midi software and of I
think it was from BreakThru or something. All very much affordable, and
I think that if you are interested in MIDI you will find many more names
of programs in the magazines. So there is a choice, which makes your
argument invalid.

m> or something to change the system font?
m> --

Moi (dutch dialect) Daniel James Frederiksen,

If you're using NVDI or GDOS (guess you're not) you could change your
ASSIGN.SYS sytem font in the one you like. Else you could use the
VDIFONT.PRG this one goes in your auto folder and you can adjust it with
VDIFONT.ACC/CPX
remember you can only use UNproportional fonts (which I cannot find
anywhere). I found this program on a dutch BBS (+31 23 34077) is not to big
so I could mail it also to you. If you have nice (thin) unproportional GDOS
fonts please let me know!

I know the game and I also think the game is very addiciting especially
when played with more than one person. It is also pretty old already. I
have been thinking about writing a similar game for the St, but have got
no time, nor any experience (well apart from some basic mini games on
the c64) in games programming. Good game, I would love to see an ST
version, especially since sound and graphics could be a lot better on
the ST.

Source record: 199962

You can't get this routine LEGALLY by now, since it's copyrighted.
The only means to get it are :
- be a developper, and buy the JPEG licence & developping kit (< $100). After that, you can developp software usin it, and spread your soft with the routines.
- Register to GemView. I was at Brainstorm's yesterday, and spoke with the guys. One told me that GemView was going to be released with the routines, which mean, spread with them. The editor has bought the licence.

I also saw their MPEG player. It's incredibly fantastic !!!! I've seen a WHOLE (yes W H O L E) Tex Avery cartoon - the lion who becomes crazy because of a mouse - . It lasts 5 minutes, takes 5Mb, and is played at 8.5 fps !!! In a 160x120 window, in True Color mode. I tell you it's incredible. BUT, you're not about to see any software using it, since NOBODY has bought their licence (for whose interested, it costs 300000 FF, which is nearly $58000). Too bad, when you see what it gives you.
I can't help thinking about the games with cinematic sequences that should be released then on our great machine. So, the solution is simple : if you want games with MPEG cinematic sequences, PRAY...or PAY !!!

M.Bourlon

It is??? That's news to me, Gruber. But hey, if YOU are right and I am wrong, that's fine with me but I'll have to have a few harsh words with my contacts at Atari. Last word I got was that TT and MSTE production was kaput. The last few remaining TT's were hoarded for use as Jaguar Development Systems. You can have one for yourself if you sign two pieces of paper: 1) a non-disclosure agreement and 2) a check for $9,000. Line up over there, folks. No shoving. :)

I have used both Dr.T's software (KCS) and Steinberg (Cubase). Dr.T's sequencing software is some of the worst software out there. It may be powerful, but the interface is archaic.

The only sensible solution (to a non-pirate) would be to get something like Steinberg's Cubeat (or is it Cubase Jr?), which offers some of the better features of Cubase, minus the complexity (=power) but at a greatly reduced price.

I find the pricing of this software (Emagic's and Steinberg's) too steep as well, especially considering that I don't know very many musicians who are rolling in the dough.

Use FORMAT B: /F:720 to format a DSDD floppy in drive B, for example.

249. Dollars and Sense software question

Newsgroup: comp.sys.atari.st
Date: 1993-10-05 15:59:00 UTC
From: truesdale@trues.wheaton.edu
Message-ID: <5OCT199310595314@wheaton.edu>
Source record: 199979

I recently bought a used copy of Monogram's Dollars and Sense software, and everything seems to work except for printing. I'm supposed to be able to create and send reports to an Epson/compatible printer, and to print what's on the screen. Either method sends my 1040ST to never-never land. I'm trying to print on an FX-85.

I haven't been able to locate Monogram (maybe they don't exist any more?), and the guy I bought it from hasn't answered email. The reviewer in Antic way back when seemed to be able to print, albeit with some quirkiness.

Can anyone shed any light?

Thanks,

250. Re: Need info on Quantum LPS105S

You need to grab hold of a program called Magic Shadow
Archiver...
should be available at most places...

Cheers.

Look Annius I BOUGHT Notator SL and my friends and acquaintances laugh at me and tell me I have wasted my money coz everyone and their dog has got a cracked copy of Cubase (V1 and now V2 but not V3 yet). In fact apparently the cracked Cubase's work better than some early releases.

However, I am laughing myself because

(1) I have a manual. As someone who works extensively with computers (mainly OpenVMS and ataris, but *nix and Pc's and Mac's too) and who has read to Notator 3.1 manual cover to cover I certainly wouldn't be as productive with a cracked copy. I decided to buy Notator because I'd got as far as I could with budget and PD sequencers and don't have time to waste. I am still learning Notator shortcuts that you don't stand a chance of discovering by the "suck it and see" approach (ever thought about why Cubase/Notator don't have some form of online help?)

(2) Compared to other sequencers I have tried, Notator is pretty rock solid. Any crashes I've experienced are generally due to hardware problems (eg bad earthing on my extra-ram deluxe) not s/w. OK Notator 3.16 has a few VERY annoying bugs. If you are running a cracked copy then it could go down on you anytime and its your own fault.

(3) It is also illegal to pirate such s/w

(4) ...

There are plenty of PD and budget sequencers out there if you don't need or can't afford the features of the likes of Notator (Logic) and Cubase.

And for any of you that have used FDFORMAT on the PC (a TSR that acts like a patch, allowing PC's to handle and format up to 1.72meg high density. These disks also work with the Atari (well, double density drives can handle the 820k mode, anyways; the 1.72 works on my HD drive)...

The extra 300k is nice for storage :-)

>up and relax.

This has always been the bone of contention in this newsgroup.
Europeans (and formerly us] Canadians, before Atari down sized Atari
Canada out of existence) always had a much healthier Atari scene than
the US. It's difficult to realize just how bad it is in the US, but as
an example, my city of Vancouver once had more dedicated Atari dealers
than New York city.
Now I hear from my German correspondents that Atari is slowly
vanishing there as well, and of course the Canadian scene is just about
dead.
I'm glad to hear Sweden and the Netherlands seem to have a healthy
scene going, but please don't imagine that because you do, everyone who
complains is just whining.
I know when it came time for me to look at a more powerful computer,
that nothing Atari makes was in the running, and unfortunately, this
seems to be the case around here. The Falcon can not hold it's own in
it's price class, no matter how much people would like it to. If Atari
had released math libraries in the Dev knit that took advantage of the
DSP, then you might make a case for the added speed of the DSP making a
difference, but when extra thought has to go into programming for it,
especially on a multi-platform piece of software, I can guarantee there
is not enough money in the Falcon sales to do a special port
Anyway. To make a long story short, can _any_ Atari enthusiast
honestly tell a North American who was disappointed with Atari support 6
years ago that things have improved now? If you're lucky enough to have
a dealer nearby, (s)he's likely to be dedicated and enthusiastic, and
you'll get good service. If you don't, I hope you like mail order.
A local dealer just got hit with a real zinger by Atari, or so I've
been told. Atari, in their infinite wisdom, has decided to fold
repair/warrantee work back to the home office. This dealer, who went to
the trouble of buying the Atari service pack and hiring a tech to do
warrantee work is no longer able to. With Falcon sales so abysmal, this
means the main bread and butter of the dealer is toast. He's looking
around for a store that costs 1/2 as much in rent, as he can't keep up
with his former rent.
As a former contract programmer for an Atari developer, I can also
say that Atari isn't very helpful there either.
Oh sure, they've helped arrange some cross license deals for the

euros, but try to get them to do the same for the US programmers. We had one package ignored because the fellow in charge of that aspect of development said he couldn't figure what the package did from the box. This in spite of a press kit including among other things, a 2 page review in Electronic Musician, including a side-bar listing all the reasons you could not do without this package for live work. (Music junkies will know the importance of that.
This plus a mailing to every major music store in NA netted us ZERO enquiries, except from Lexicon, who's product we were supporting in a new product. To succeed in the Atari Market, you've now got to write into other markets first.even .01% sales in the DOS market will net more than the best selling ST program.
And unless our music store is a fluke, counting on sales from music stores is a joke. If music stores carry and sell the Falcon, they will package one major title with the Falcon, usually Cubase or Notator, When the DTD stuff arrives, maybe it will get a boost. Otherwise, the huge midi market is a bust. There are no utilities sold in music stores that we take for granted, like UIS, or Warp9/NVDI. As someone involved heavily in professional music, I'm amazed at the number of musicians who know how to run one program on their ST, and that's it. Not a lot of inspiration for someone trying to program something new and different,

Shrunk somewhat?!? Evaporated would be a better description. In this
area, there used to be quite a few Atari dealers; now you have to drive
at least 45 minutes to get close to one dealer.

Like I said, this may vary in your area. All of the ST dealers I knew
of in Colorado are still there, and Houston has dropped by one... I
was just giving my experience.

> However, I would say that the software base is stronger than it was 6

SoftLogik has abandoned PageStream on the Atari platform; 2.2 is the
last version. They're developing it for the Amiga only now.

Well, this is annoying to me, but like I said Calmus is really really
good, although I think harder to use than Pagestream (although in
truth I have only played around with it for a little while)

> the best of any platform. Programming wise, I still prefer my Atari
> over most anything else (and I have extensive programming experience
> on Suns and PC's). And for word processors, well there are so many

I wouldn't program on a PC if you twisted my arm _really_ hard; an 'OS'
that requires the programmer to use "__near" and "__far" pointers, and
worry about "memory models" and whatnot is bad news.

Hey, I didn't say I enjoyed it!! When I get out of school, I'm going
to try to land a better job programming UNIX systems. Or maybe OS/2,
that doesn't look so bad to program.

> choices I won't even go into them here... (I really like Atariworks so
> far though... it has the first spelling checker I like as much as

IMHO, most Atari word processors could use a lot of improvement; I
haven't found a good one yet. That's why I use uEMACS. :-)

Well, what do you want in a word processor? Like I said, the
Atariworks word processor is pretty nice, and has a good spelling
checker (my primary feature in a wordprocessor). It even supports
nifty things like annotation in the margins, both text and audio.
It lets me do simple stuff quickly that looks rather nice.

I also have had WordPerfect for some time, and I still like it a lot.
Its spelling checker still, I think, is the best of any I've ever seen
(in the interface area, that is).

Now my favorite text editor ever is of course GnuEmacs, so you are not
far wrong in your choice of editors... And this is all you really
need anyway if you use LaTeX.

See, the Atari has pretty good simple word processors, and everyone
knows that any real textual project requires TeX, so all bases are
covered here... :-)

> WordPerfect's). For almost any software category, equivilent software
> exists on the ST that are on the same level as the stuff on other
> platforms.

I don't think there's anything that even comes close to Mathematica or
Maple. That pretty much locks engineering students, math students, and
science students out of the ST/TT/Falcon market.

I believe that in fact you can get Maple for the ST line... Now it is
true that Mathmatica is nowhere to be found, and there really is
nothing like it on the Atari (so far as I know).

> Now you say that you are a FORMER Atari owner. Pretty shaky ground to
> be commenting on the state of software or support, don't you think?

BobR's a _continuing_ Atari owner; he owns and uses an Atari computer.
Like me, he doesn't like people trying to convince the innocent that the
Atari market is in an 'Ok' state. It's very, very sick, and doesn't
seem to be getting any better (that's not to say that it's getting
worse; it's been like this for at least three years now).

I apologize for ever mistaking him for a former atari owner, I really
really thought I had read that somewhere!!!!!!!

So, when's Atari going to release a 68040 machine? Or maybe a PPC601
machine? :-\ If I'm going to spend some $$$ I want a decent amount of
power and some decent graphics; I'm one of those mutants that could care
less about sound (my volume is always turned off so I can listen to the
CD player) or MIDI (my MIDI ports are practically virgins).

Well, I myself really like the audio features, and really think that audio is one of the last unexploreed features of user interface design - I find SAM (system audio manager) very handy, because I can wander off and cook and listen for windows opening or alert boxes coming up without having to look at the screen. Now I'm just waiting for more programs to offer SAM support... And if I can figure out how to do it, I'd like to have SAM tell me stuff like when a prt of a compile is done, or when some process has finished.

I myself don't pretend that the Atari market is in a wonderful state, but I do find that for just about any need I have there is software to meet that need. And who knows, perhaps things will get better - they probably are planning a Falcon040 (I dream of a PowerFalcon, but even I concede that this may take some time if ever!!), but I don't expect to see it for awile. In the meantime, I really enjoy my Falcon!! The larger screen area especially is just so much nicer than my old STE...

One other consideration is that anyone who reads this newsgroup can get a lot of Atari help just by asking here, I know I have!! So while I may not reccomend that someone who really has little computer knowledge get an Atari without a dealer and users group nearby, I feel pretty safe in advocating its purchase to someone who already has enough knowledge and access to read this newsgroup.

Well, I better stop here, I apologize for the length to those who pay for this stuff!

259. ATARI ST FOR SALE

Newsgroup: comp.sys.atari.st
Date: 1993-10-05 18:20:52 UTC
From: jim@ppg.com
Message-ID: <9310051808.AA20626@moe.com>
Source record: 199981

***** COMPLETE ATARI ST SYSTEM FOR SALE ******

Atari 520ST CPU
Atari Two-button mouse
Atari 360K Single-sided 3.5" floppy w/cable
Toshiba 720K Double-sided 3.5" floppy w/cable (Also works on IBM PCs)
Atari Monochrome Monitor w/cable
Commodore 1084 Color Monitor* w/cable for 520ST
Atari RF Modulator built-in
Atari SX212 Modem
+ Plus all original documentation for the above hardware

Plus lots of software too numerous to detail, including:
--Macintosh Emulator
--IBM PC Emulator
--Compilers & Interpreters (C, Pascal, Lisp, Basic, Assembly)
--Word Processors
--Graphics, Drawing, CAD, and Paint Programs
--Terminal Emulation
--Piles of Games
--Loads of Utilities
(Some manuals have been lost)

Also Includes the following books:
--Atari ST Internals (Abacus)

I'll send you the entire package (I won't break it up) C.O.D.
It all goes to the highest bidder! Make me an offer!

Interested parties please contact:

Jim Sisul (800)334-7272 ext. 7181 (days)
(913)339-6801 (evenings)
sisul@bmskc.PPG.COM (Internet)
{...}!uunet!bmskc!sisul (uucp)

There are machines at both numbers; be sure to include a daytime
phone number!

*All hardware is in excellent working order, much of it rarely used, except
the Commodore Monitor, which works fine 80% of the time. A connection on
the main video board in this monitor comes loose sometimes, causing the
picture to go blank until you wiggle it. Anyone handy with a soldering iron
should be able to fix this. A few local repair shops said it could be fixed,
but I didn't because I only use it for games (and I was going to sell it).

^^^^^^^^^^^^^^^^^^^^

Hey, that's a great analogy Hutch!

> I freely admit I LIKE Atari computers. But hey, I also like (and own) a Mac
> and pc, as well. So sue me. :)

The fundamental problem in this merry flamefest is that Bob _LIKES_ his
Atari; otherwise he would't use it, and he would't post to/read this
newsgroup. The same goes for me as well. We're not about to put up
with the _complacency_ that has allowed Atari to get into the bad, bad
position that it's in now; we want people to wake up and _tell_ Atari
how annoyed we are at their:

a) pathetic marketing

Too true!! Although I wonder if they are yet producing more units
than dealers can sell? If so then I GUESS I can see some point in
holding off (though I do think they need to advertise some!!)

b) lying to the developers/users (remember when the Falcon had a
32-bit bus and FSM-GDOS was delayed due to 'packaging' problems?)

Yeah, that is annoying...

c) producing crippled computers and running around calling them
ground-breaking, state-of-the-art, etc (gee, that's a nice
Falcon030sx they gave us; too bad the DSP is next to useless most
of the time)

When is that time? The DSP already gives me nice fractals, and
decompresses JPEG's pretty quickly, as well as doing nifty sound
effects. MPEG stuff is already around, and I'm sure other
applications will develop.

d) pathetic documentation

This is also true, they espescially need better docs for MTOS!!

e) pathetic ergonomics (I'm surprised I don't have carpal tunnel
syndrome from this keyboard yet)

Yup, I do wish for an external keyboard.

f) etc, etc

I agree and disagree. :-)

IMHO, it's not _fair_ to paint a rosey picture of the Atari world to
people who aren't familiar with it, especially when they're considering
dropping $2000 to enter it (which, IMHO, is like jumping with no parachute).

More like $1500 (Falcon 4/80 + monitor), but I do think that someone
should play around with a Falcon before they purchase one, and try
running some software they'll be using on it. This is where the
shortage of dealers hurts the most.

> OK, "The Atari market today is worse than it was six years ago, Atari
> dealers are harder to find and there are fewer software titles available."
> Hey, now _that's_ some ground breaking news, eh? But I _still_ might
> recommend a Falcon purchase to someone if I thought it best for their needs.

This _was_ news to the original poster though; too many people were
pulling punches for Bob's liking. ;-)

Are there really fewer software packages? I'm not sure, but I would
say that the stuff around now has really come a long way in terms of
quality. Now it is true that we have lost some big names (like
WordPerfect) over the years, but there is still some software around.

I admit that I am perhaps a little bit biased twords (sp?! now you see
why Spell Checkers are so important to me) the Atari, but then someone
needs to be in order to keep the Universal in balance!! :-)

Does this person have a point to make about the ST???

I have a couple of suggestions for ya:

1) The ST is a 680xx based computer, the Jaguar is a dedicated game machine. Don't pass out such useless info here.

2) How about posting this in rec.video.games.misc where is belongs, and where the many Jaguar fans will be more than happy to politely flame you off the net!

I'm looking to buy a new (if I can find one at close-out rates)
or used Atari ST for MIDI sequencing. Do I need a 1040ST for most sequencing
programs or will a 520 do? Is the only difference between the two machines
memory capacity? Which would be cheaper... buying a 520 and upgrading to
a meg of memory or buying a 1040 ST. Do the STs accept SIMMS?

What's out there in shareware for sequencers? There's no way in hell
I'm going to pay more than $50 for a piece of software (on a budget, here folks)What's out
there for 8-bit sampling cards for the ST and what are the
prices? (used, preferably) Is there a magazine that's devoted to Atari
products? I remember there used to be, but it seems no magazine stores
carry them (or they folded).

Thanks,

Dana

P.S. What's the cheapest price I'll likely find a used 512 or 1040ST for?
I do _not_ need a color monitor. Can I hook up my own TV to it
(I don't need great graphics resolution) or is there a cheap
black and white monitor I can use?)

264. Atari ST (2.5meg RAM/48 meg HD) system for sale

Newsgroup: comp.sys.atari.st
Date: 1993-10-05 19:15:33 UTC
From: janovetz@eehpx19
Message-ID: <28sh4l$knk@vixen.cso.uiuc.edu>
Source record: 199984

Greetings. This is the first time I have been in this nn group, since another recommended it as a place to sell my stuff. If this is not an appropriate place to sell this, please let me know. I apologize.

I have an Atari 1040ST system for sale. In general this is the stuff I have for it. There is more, I just don't remember it.

Atari 1040ST - no built in Power Supply. It only takes about 30 watts of +5 and +12vdc. If you want, I'll throw in a 200 watt PC supply I have.
JRI SIMM board installed so I have 2.5 meg RAM
Seagate 44 meg SCSI hard drive
ICD Advantage PLUS DMA->SCSI adapter.
SC1224 color monitor
A couple of mouses and a couple of joysticks. Of these, I am not sure which one's work, but it is only a matter of bad wires on the optical mouse. The other mouse works fine.

DEKA keyboard adapter to use PC keyboards with the Atari.

There is also a 1.5'x2'x8" (approx) box filled with software including Word Perfect, PageStream, about 15 Infocom games, DevPac assembler, OSS Pascal,i FAX software, etc.

PLEASE!! If you read this message, you were interested in some capacity. Therefore, please press the key to mail me immediately on your News Reader. Mail me ANY offer. I won't guarantee acceptance, but it's worth a shot, isn't it? I HAVE to get rid of this to pay some tuition/rent/food!

Shipping will probably cost about $50 for everything. (There's a lot of shit!) If you only want bits and pieces, LET ME KNOW!!!

/
/ * / Jake Janovetz
* * (217) 351-6448
janovetz@coewl.cen.uiuc.edu

PS Is looking for $500 good/bad too high/too low? Thanks.
PPS Please mail me, as I'm not a frequenter of this group.

265. Mac pic convertor

Newsgroup: comp.sys.atari.st
Date: 1993-10-05 19:17:02 UTC
From: thopman@herman.cs.uoguelph.ca
Message-ID: <28sh7e$kte@nermal.cs.uoguelph.ca>
Source record: 199986

A short while ago someone posted a message asking for a program on the Mac that would convert ST pictures to Mac formats. There's a program called Imagery (I don't know where you can get it, sorry...) and it'll handle most of the standard ST picture formats, including IMG and SP?, as well as formats from other platforms like .BMP and .IFF.

From: aspect@cats.ucsc.edu
Message-ID: <28sine$8bd@darkstar.UCSC.EDU>
Source record: 199987

don't know what problem you are having, but on my SpeedoGDOS with over 60 fonts loaded, it only takes me an extra 10 to 15 SECONDS to load. Do you have the width tables turned on? If you do, that will slow things down. Some older GDOS programs require them, but most are better off without.

268. X11 Speedo Fonts

Newsgroup: comp.sys.atari.st
Date: 1993-10-05 20:34:23 UTC
From: phruby@ucrengr.ucr.edu
Message-ID: <28slof$216@galaxy.ucr.edu>
Source record: 199990

I remember we talked about the slow loading time of SpeedoGDOS fonts. The problem is you need to go into the not the printer control program but the other one. (the outline program) and turn off one of the switches. I wish I could remember which one. Fonts should load then in only a few seconds, not minutes. Does anyone remember which button this is?

270. WINX2.1

Newsgroup: comp.sys.atari.st
Date: 1993-10-05 21:04:24 UTC
From: foster@rufus.nsc.com
Message-ID: <1993Oct5.210424.27143@berlioz.nsc.com>
Source record: 199992

I have read the manual on this several times and cannot seem to get it to work.

I have a FALCON030 4mb ram tos 4.04.
I have winx.prg in my auto folder after gemram and I have a tosimage made.

I do use superboot8.1 and this may be the problem but I don't see why.

problem: It keeps asking me to make a tos image (endless loop)
and the winx.cpx says nicht vorhsomething.

Thanks in advance for any help.

P.s. also with all the goofing I have doing with my falcon I found that you can delete the desktop and run programs by the file selector.
Weird huh?
Anyway it seems that although the desktop is gone it doesn't free the memory.

Thanks again,

Paul F.

271. Re: Falcon Software - Atari List

275. Re: prices

Newsgroup: comp.sys.atari.st
Date: 1993-10-06 00:12:32 UTC
From: Bob_BobR_Retelle@cup.portal.com
Message-ID: <92409@cup.portal.com>
Source record: 199901

Used ST systems are plentiful these days, for some reason.

As for prices, it all depends on what comes with the system. I've seen 520STs for as low as $50 for the computer itself. A few hundred dollars for a 1040 with monitor and external drive, or possibly a small hard drive would be what I'd expect to see.

About memory, you'll need as much as you can get if you intend to do anything of any size or length. The 520ST and 1040ST are not easily upgradable unless you like to hack and slash the insides of computers to get a reliable memory expansion. The 1040STe <--(note the "e") IS easily upgradable because it uses SIMMs (the other older models use soldered in DIPs).

The maximum memory you can use in an ST is 4 Megs, limited by the system design.

None of the ST models are currently in production, so unless you can find an STe at a dealer (if you can find a dealer), posting a "wanted" ad to the net would be your best. Also, if you can find a local BBS that has an Atari section, or better still if there's an Atari user group in your area, they may have some leads on systems for sale.

Monitors: Some models do have RF outputs for use with a TV, but you wouldn't want to use if for anything like music notation programs. The resolution on a TV is OK for game, but not much else. Luckily Atari monochrome monitors are excellent, and not very expensive. Most "serious" software runs in mono.

Magazines: Almost all dead. There are a few exceptions, but you won't find them on newsstands. Imported magazines from Germany and the UK are available, although they too are a dying breed. Atari dealers sometimes stock them, otherwise you'll have to subscribe.

Software prices: Music is not my forte, but I don't think you're going to find professional music programs for $50. A recent thread of articles here is questioning whether the *upgrade* to a popular notation program is worth $299.

The Atari ST is a great system for musical applications, but you're going to be on your own for a lot of things. It's best to realize that going into it. If you can find a local users group you'll be way ahead, and online support areas like this one will be invaluable.

>How much would it _cost_ to collect .5k of Speedo fonts? It cost me
>$50US to collect that many type-1 fonts; the ShareWare fonts shall
>languish in their unpaid-for state until I use them for something.
>cherborth@semprini.waterloo-rdp.on.ca
>Chris Herborth
Well the Speedo fonts I've bought (the starter pack, newsletter pack,
and the Wordperfect set) are all excellent quality. Compare that to the
multitude of easily obtained, but low-quality, True-Type and Type 1
fonts. If you want GOOD fonts they cost whether you buy Postscript,
Calamus or now Speedo. I like the fonts I got and when more programs
come out using Speedo (and coming with more fonts) I think you'll agree.
Of course if you're just sore 'cause the fonts you already have don't
work-sorry but no one said they would.

I don't know what time zone you live in, Kev, but my calendars here say it's only October. And besides, unless you're living in San Francisco, Dallas, or New York, you probably won't see those commercials this year, since you can't buy a Jaguar anyway unless you're in one of those cities.

If you're going to continue this pointless thread ("Look, ma, flame-bait"), at least take it out of comp.sys.atari.st and over to rec.games.video.misc... You can always bug 3DO people as well while you're at it.

279. STE Stereo Sound

Newsgroup: comp.sys.atari.st
Date: 1993-10-06 01:59:20 UTC
From: stevew@stoner.eps.mcgill.ca
Message-ID: <1993Oct6.015920.21302@sifon.cc.mcgill.ca>
Source record: 199903

I recently obtained speakers that I can plug into my 1040STe, but when I do, the sound still comes out of the monitor speaker and not out of the speakers. Is there something else that must be done to re-route the sound out to the speaker jacks at the back of the unit? The speakers are supposed to be O.K. for computers, but they are joined together and only have one input jack so that I must use a splitter to plug into both the right and left stereo inputs. Any sound advice appreciated!

>mouse operated?

GEM NetHack can be played with the mouse, but you'll soon tire of that.
I still use the mouse for selecting rarely-used commands from the menubar,
such as Wipe-Face, and it is excellent for beginners, but when you have
DOZENS of commands available, keyboard is the way to go.

Hi all,

I have a problem with one of my hd partitions. I find that I have a bad sector in the root directory of my E: partition or something like that, and my ICD program tells me that I must reformat to recover this.

My question is, is there anyway to format just that partition, and not the whole hd? I tried rebuilding it with the various ICD utilities, but nothing seems to work...

Just an interesting note, the bad sectors are in a small section of the drive all arranged in a periodic pattern...is this a sign that there is a physical problem (such as a scratch...) on my drive?

If it helps, I have a MiniScribe 3650 with Adaptec 4000/4070/5??? controller, and the ICD AdSCSI host adaptor. It is running as a 64 Mb with four 16Kb partitions (C, D, E, F...pretty generic).

Any and all advice truly appreciated...

It's only in German. Unfortunate. Also, I was expecting to find a sample
editor, which this program isn't. It's really a song editor, i.e., it lets you
arrange a bunch of individual samples into a song.

I am selling my Practical Peripherals 2400/9600 fax modem and
STraight Fax software. This system is a ready to run fax configuration for
any atari st system. It supports 9600 baud send and receive fax at both
resolutions. The software features a nice screen viewer/editor, file
conversions (fax, img, degas, text), osrtable phone list, multiple fax,
fax scheduler and sedn/receive log. The software will also print faxes to
a printer. It comes with drivers for popular dtp programs so, for example,
calamus pages can be printed directly to fax. The system includes all the
original disks and manuals. The modem is like new. Asking $130US.

291. Autobooting a HD with 1040ST

Newsgroup: comp.sys.atari.st
Date: 1993-10-06 07:59:48 UTC
From: tpearson@titan.trl.OZ.AU
Message-ID: <1993Oct6.075948.17371@trl.oz.au>
Source record: 199921

I recently replaced the 20 Mb drive in a SH205 HD with an 80Mb drive. I formatted it and partioned it with HDX 5.04 (80 Mb partition) and used the latest AHDI (6.?) Now I cant get it to run any programs in the auto folder when it boots. It takes ages to boot from the HD, seems to hang when checking the drive, then comes back with unrecognized drive. It then boots OK including accessories but not programs in the auto folder. I tried 5 16Mb partitions but there was no diference. If I put the 20 Mb drive back everything works fine. Can anybody tell me what I am doing wrong? BTW the drive works fine apart from this, also I am using TOS 1.02 still (I know I should upgrade TOS but I doubt this is the problem).

Trevor.

> I recently obtained speakers that I can plug into my 1040STe, but when I do, the sound still comes out of the monitor speaker and not out of the speakers. Is there something else that must be done to re-route the sound out to the speaker jacks at the back of the unit? The speakers are supposed to be O.K. for computers, but they are joined together and only have one input jack so that I must use a splitter to plug into both the right and left stereo inputs. Any sound advice appreciated!

These outputs are line outputs, NOT amplified sound outputs. You must use
an amplifier between your STE and the speakers, to obtain a sufficient
volume. I use it hooked to my HIFI set and it's really great like this.
Furthermore the sound will still go through the Monitor speaker...

Some utilities may be able to mark the sectors as bad and delete the corres-
ponding files without reformating the whole partition. Check out...
>
>My question is, is there anyway to format just that partition, and not the
>whole hd? I tried rebuilding it with the various ICD utilities, but nothing
>seems to work...
Use ICDFMT, and when you're at the partition table screen, select the
desired partition and click on Rebuild this partition only (if your version
is high enough). It will check and map bad sectors for this partition and
high-level format it. (I think) Anyway, you still can try, what is sure is
that it won't touch any of thye other partitions.
>
>Just an interesting note, the bad sectors are in a small section of the drive
>all arranged in a periodic pattern...is this a sign that there is a physical
>problem (such as a scratch...) on my drive?

Suppose your drive contains one disk, it has two sides, and several sectors
on each track of each side. The sectors are sorted on the disk like this:
S0,T30 S1,T30, S0,T31, S1,T31, S0,T32, S1,T32 .....
If one side only is scratched, the sectors that are on this side only are
bad. Interlaced you'll find the safe sectors of the other side...
The same way if you have more than 1 disk, i.e. 2 sides.
>

For sale, Microvitec CUB COLOUR MONITOR.

I can supply the relevant cable to attach it to any Atari,
Commodore, PC etc etc. Will connect to most computers. RGB
analogue or TTL. Good picture, I use one myself and
I've got one spare.

If you want to use it with CUBASE or similar high resolution
software, I can supply a Public Domain mono emulator accessory
that gives you a very useable picture on a colour monitor.

If you play a lot of games, a monitor like this could
definately help improve the health of your poor eyes...

Delivery within a reasonable radius of Peckham or Ladbroke Grove
can be arranged free of charge.

50 pounds, including cable and
delivery, or nearest offer.

Now you can't say fairer than that, can you.

Leave a message on 081-693-2846 and Ill get back to you
as soon as possible.....

Source record: 200001

Well, I downloaded the demo, put it together, unzipped it and ran it on
my Falcon with SVGA monitor and got a load of junk.
Aha I thought, yet another demo that requires me to plug into my TV.

Now the game looks good and impressive and witty but on a TV it looses
something with the resolution. Also, green writing on black background
doesn't show up very well. Neither does red, and neither does blue! Okay,
maybe having an SVGA monitor and a TV is a bad combination and I ought to get
an RGB monitor to avoid the bad resolution problem. But don't RGB monitors
flicker or do I have to get a NonInterlaced RGB monitor. (Perhaps someone
could e-mail me a comparison of monitors for the Falcon!)

The game is interesting but the main character could walk a bit
faster (more like Guybrush from Monkey Island perhaps). At the
moment the animation is like Captain Pugwash with bits of arms and
legs just shifting around! The video is good and I like the face masks!

How much will it cost and will it come on 50 disks that are HD installable!

>
>By the way, Atari Works should be AV as it's in the stores now.

Excuse my lack of memory (hey, I'm 23, so that memory loss... :-)

Anyways, does Atari Works include a database module? I know that
it has a word processor and spreadsheet, which I could definitely use,
but a database module would be helpful to me as well. I'll probably
get AW regardless, but this might give me an added incentive to buy
it earlier.

If it does have a database module, can it load in a pure data file
(perhaps assuming "Columns 1-10 in field 1" etc?). I have my
entire CD collection in a text file, and am trying to find the
easiest way to put it in a database format (without having to retype
it all)...

If nothing else, I assume it supports the clipboard? It would be
nice as some programs like CoNnect, Edhak (,Gemini?) support it -
makes life easier (for some of us lazy folks :-)

Yes, there is a Maple for the ST line, but it is only version 4.2, without GEM. You can't get the actual version 5.2 for the ST, but for the PC, Mac and Amiga ! The version 4.2 looks against the version 5.2 for the Mac like a very old, poor and dirty programm. And the ST version 4.2 don't run on the TT.
This and the lack of speed is one of the reasons, why I'm looking for another computer.

^^^^^

Ouch - bad pun :-)

Anyways, you *might* need to have the computer fed through an amplifier
and then into the speakers. I haven't tried connecting speakers
directly to my computer (I might try it to see if I get the same result),
but I normally have my MSTE RCA jacks connected to my stereo (which
would then play the sounds through the speakers).

As far as the monitor speaker, I think they'd play out of there
regardless...

Chris,

Try turning the Font Width table OFF. I have about 75 Speedo fonts
installed and it takes less than a minute for my GDOS programs to
load.

When the Font Width table is ON, everything takes forever to load...

Robert,

Bitstream has a package called something like "WordPerfect 6.0
Bitstream Font Package" that's available at EggHead Software for
around $20. It contains 50 fonts that is usuable with SpeedoGDOS.

It's a great deal! The fonts are really nice looking and it works
great with AtariWorks. Hope this helps.

We (the developers of BlowUP030) are working more than a half year with the extended modes (eg. 1024*768,104hz interlaced, 50Mhz pixel clock) and no problems at all occurred. Sure, the video chip temperature is growing, but not much. If you use no external hardware, damage is just ATARIs fault...(the ST-compatible modes run with 32Mhz!)
BTW: the name 'BlowUP' has nothing to do with 'just blown the video chip' :-)

I'm pretty sure you can buy any BitStream font pack for the PC, and use
those fonts. You may have problems reading the 1.44M floppies, but
that's easily solved if you know someone with a PC...

Don't get the Mac ones (are there any? Macs use the better ATM for
everything.), you won't be able to read the disks...

> article.

Well, there's a really huge problem with trying to port Motif to the
ST/TT/Falcon... it's just a window manager that runs on top of X. X
can't be ported (yet) because MiNT doesn't (yet) support sockets, and X
uses sockets for everything on Earth. It'd also be unusable on an ST
due to the memory limitations (and it'd be annoying because of the
screen sizes).

Full source for X11R5 is available if you feel like starting a port! :-)

Blasphemy! :-) Actually, Warwick's GEM port has menu items for all of the
commands; it's much, much faster to just use the keyboard though (well,
once you know the commands).

Beware... once you start playing NetHack, you'll never stop!

It will play fine in STMed or STLow; unfortunately, the screen is
seriously scrunched. It's ok in STHigh. Naturally, it's designed for
at least 640x400x16 (Warwick got a TT recently...).

I think Dominik's problem is due to a bug in the nh313gem.zoo
distribution; look for nh313gemb.zoo (the ultimate, latest version) on
atari.archive and it's mirrors.

From: richardson@vaxr.sscl.uwo.ca
Message-ID: <1993Oct6.110922.1@vaxr.sscl.uwo.ca>
Source record: 199944

I was curious about part of the "hardware FAQ". I noted that the TOS version attributed to the Mega STE range was TOS 2.06...I am looking into purchasing a mega STE and when I checked out the machine it has TOS 2.05??? Should I be worried? I simply ran Maxifile as a program and checked the TOS version from within maxifile. Is there any MAJOR difference between 2.05 and 2.06? Thanks in advance for any help :^)

Source record: 199856
Cross-posted to: comp.sys.atari.advocacy,comp.sys.atari.st

```
- Sunnyvale, CA JAGUAR TO BE DELAYED 'TILL AFTER CHRISTMA
-------------

Our ever vigilant observers have reported the Jaguar is now expected to
ship shortly AFTER Christmas 1993. This is in direct contradiction to t
plans announced detailing a drive to ship to New York City and Los Angel
in time for Christmas. While some observers where somewhat disturbed by
this news others shrugged it off with the comments; "So what else is new
with Atari? They're running true to form!"

------------------------------

There are several rumours starting to fly about possible Jaguar
delay.

DISCLAIMER:

This are so far unconfirmed rumours, although they seem to start
materializing (from different sources, same thing). I am also interested
in seeing the Jaguar rolling out. This could be true or false, although
seems more likely to be true.

-------> BTW, release date for CD-32 is October 1993.

Safe Harbor expects it sometime this month and they are
going to sell it for $385 US dollars.

Hi Falcon-users!

I just uploaded the demo of BlowUP030 to
ftp.e-technik.tu-muenchen.de (atari/Falcon/demos/blowUP_D.lzh)
atari.archive.umich.edu (New).

This Demo may be copied and spread for free. It enables you to test the
abilities of the resolution-expansion BlowUP030 it's virtual screen and it's
screen-saver (that speeds up the Falcon up to 70%). The demo only works in
16-color-mode.
For further information write or mail to:

> should be available at most places...

I think it likely that the question was a different one, i.e. "how do I get them home to run MSA on them?" There are a number of answers, but one of the easiest is to use uuencode/uudecode. If you are on a Unix system, you will have these two commands by default. What you will need are versions for the ST (available from atari.archive.umich.edu).

Basically, a uuencoded file consists only of visible ASCII characters (it is usually slightly larger than the file it is encoding). After you convert a file to a uuencoded entity, you can split it up like any text file, use multiple floppy disks to get it home, reconnect them with a text editor (or with a Unix-like cat command for the ST), and uudecode them. You will need a hard disk or a big RAM disk for the latter (I did this for years with a 1.5mb RAM disk and no hard disk).

If you have troubles, feel free to email.

I believe View GIF 1.2 will allow you to do this (as well as
save in MAC format, and one or two others). It's been awhile since
I've checked...

Source record: 200006

In article <1475@usdtsg.DaytonOH.NCR.COM> anisko@usdtsg.DaytonOH.NCR.COM (anisko) writes:

Anyways, does Atari Works include a database module? I know that
it has a word processor and spreadsheet, which I could definitely use,
but a database module would be helpful to me as well. I'll probably
get AW regardless, but this might give me an added incentive to buy
it earlier.

Yes, it has a pretty good database module...

If it does have a database module, can it load in a pure data file
(perhaps assuming "Columns 1-10 in field 1" etc?). I have my
entire CD collection in a text file, and am trying to find the
easiest way to put it in a database format (without having to retype
it all)...

This should be easy, I just loaded in Atari Works for a sec, and the
database can import tab seperated, comma seperated, and DBASE files.
So, a line for your CD collection might look like:

TITLE,TIME,COMMENT,SONG1,SONG2...

and so on (note one nice thing is that each entry can be as long or as
short as you like). I'm sure if you spend enough time with SED and
AWK you can massage your textfile into something like that... :-)

If nothing else, I assume it supports the clipboard? It would be
nice as some programs like CoNnect, Edhak (,Gemini?) support it -
makes life easier (for some of us lazy folks :-)

I think it does, but I'm not sure. I never have figured out how to
use the clipboard in other programs...

That's strange, I am running Gemulator 3.0 on a 486DX33 and the statistics
show that I'm running ~1.3 times the speed of a standard ST. Did your
friend run it with quick turned on? Also was he running it with the SVGA
drivers loaded. If I run the benchmark with SVGA resolution and in 16
colors I notice quite a slowdown.

From: jeff@leda.arizona.edu
Message-ID: <1993Oct6.131511.4761@arizona.edu>
Source record: 200009

I'm a US Falcon owner who would like to take advantage of the UK software market.
Does anybody know how I can:
1) Get UK Atari Mags (I don't know titles or anything else)
2) Get specific dealer software listings
3) Purchase software overseas (Of course, it's probably illegal)
4) Whether or not UK software works on US Falsons without glitches.

I would appreciate any input, but would especially like to know if anyone in the US has bought software from outside the country.

It's frustrating waiting for my dealer to get any of the things described on the internet. Overall, the average wait has been about 10 months for the two products to get through.

Thanks again!
Jeff
P.S. Please do not use my inquiry as grounds for any more Falcon wars. It's just a question.

This is wrong, of course. Calamus S and SL run fine on all kinds of color screens or cards; the latest update even includes Falcon030 256 color mode.
Screen enlarging stuff like Overscan for STs or BlowUP030 is supported, that's right :-)

: in advance for any help :^)
I believe the only difference between 2.05 and 2.06 is that 2.06 will run
on machines that don't have STe hardware (ie Megas and regular ST's). You
shouldn't be worried, since 2.05 and 2.06 have all the same features.

See also at atari.archive.umich.edu; I did ports (using GCC) of two other Infocom interpreters. Zmachine and Pinfocom, to be specific. They should be kicking around in the games subdirectory. I don't have Internet access (i.e. via Telnet/ftp) anymore, so it's going to be a little difficult to provide any additional support. But they did work, the last time I ran 'em.

345. Falcon/ST Compatibility Questions

Newsgroup: comp.sys.atari.st
Date: 1993-10-06 22:07:59 UTC
From: rost@tecrus.enet.dec.com
Message-ID: <CEHvHL.376@ryn.mro4.dec.com>
Source record: 200013

I finally made it to a local dealer who had a Falcon set up for a demo. It was nice, not earth-shattering, but seeing as it has four times the memory of my 1040 and a hard disk (not to mention running quite a bit faster), it's almost cost-effective *if* it runs all my current SW.

Anyway, questions to Falcon owners:

1. Anybody using the MDisk ramdisk accessory on a Falcon? Mine is v6.0, is there a newer one out there? I use it mostly for formatting and copying floppies. What ramdisks *do* work OK on the Falcon?

2. Is there a problem with using DD floppies in the HD drive and can these floppies be read in a DD drive (i.e. I will still have an ST in use and want to be able to swap disks between the two)?

3. Can I get medium and low res on the mono monitor now? I know you can get high res (interlaced...ugly) on the color monitor.

4. Can the D2D software be run under MTOS together with a MIDI sequencer or is this expecting too much?

5. I have only heard the D2D output over cheap speakers, is it really squeaky clean (i.e. no hums, buzzes, etc.)?

6. Does the VKiller virus protection software run OK on the Falcon?

>Furthermore the sound will still go through the Monitor speaker...

Not only are they line-level, but their voltage level is low compared to most components. I find that since the line-level amps driving the outputs are vastly underpowered, I can't operate my MSTE cleanly at anything above 32 (on Xcontrol) with a slight bass boost, and I usually keep it at 29. This, of course, means that I have to ramp up the input gain on my stereo's input where I have the computer connected.

The Monitor speaker problem is easy enough to fix--turn it all the way down. However, if you set the levels so that it won't clip through your stereo, you can't hear it through te monitor (with the monitor turned up, of course) because anything below full blast (40/40) is very hard to hear through the monitor speaker.

I love Atari architecture... Then again, doing DTP with Orion blasting through my speakers (it's not that I like MEtallica, it's just that that's an amazing MOD), makes it all worth it (my comment about Ataris was sarcastic, obviously).

I think the major practical difference is that TOS 2.06 will properly
format 1.44 disks to be PC compatible (apparently the 2.05 doesn't do it
PC compatible). Other than that, there should be no compatibility
problems. My MegaSTe4 with TOS 2.05 has worked with about everything
I've thrown at it...

Source record: 200028

For those with Class 1 fax machines, or just for those who want an alternative, you might want to track down TeleOffice the "other" fax program for the Atari. I got my copy from System Solutions in the UK and except for the fact that I am still waiting for my updated GDOS/now Speedo Drivers I love it.

How much do you people think I could get for a 1 1/2 YO Atari PTC1426
and a 1 YO Atari TTM195 monitor?

I would like to get a multisync for a future graphics card upgrade.

Also can any of the multisynchs do the TT high rez? I know the NEC's have
a 135Mhz bandwidth.... ?

finally... I would like to ask Lexicor and Cybercube if they would not
mind putting up the specs on their respective boards so that people could
compare them... I would like to know because a color board is in my
future... (Lexicor, if you could post the specs of the Nova and the
SuperNova that would be great!)

Thanks all!

Actually, Motif is a X widget toolkit. There is a window manager
that uses the toolkit (Mwm).

>can't be ported (yet) because MiNT doesn't (yet) support sockets, and X
>uses sockets for everything on Earth. It'd also be unusable on an ST
>due to the memory limitations (and it'd be annoying because of the
>screen sizes).

Not really. I've seen an X implementation running under Windows.
There is also one that runs on Macs.

Remember, X is a protocal. How that protocal is transmitted
along a network is another issue. TCP/IP is the predominate
network protocal for Unix boxes. Therefore, if you would like
to have an Atari run X clients from Unix machines, it will
need a TCP/IP driver (and of course an X server running on the
Atari).

Having alot of memory is useful, but I've seen X run on 4MB
machines.

>
>Full source for X11R5 is available if you feel like starting a port! :-)

I believe someone has ported X for Atari based machines. I think
it is someone from Germany. I remember reading it somewhere.

Are there any un-ice and un-packers around?

358. Everyone loves a (gdb) puzzle.

Newsgroup: comp.sys.atari.st
Date: 1993-10-07 04:21:02 UTC
From: timg@ccwf.cc.utexas.edu
Message-ID: <2905fe$p7b@geraldo.cc.utexas.edu>
Source record: 200030
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Hi,

I'll start with the question that is most likely to get an answer:

1.)

I tried compiling the source for Andreas Schwab's port of gdb 3.6 PL 3. Compilation succeeds with a couple of disconcerting warning messages, but the killer is that the linker chokes because of the undefined symbols "setpgid" and "__fixsfdi". Neither of these is in the mint libraries, so where do I get them? Is an executable of this version of gdb available anywhere on the net (I checked ftp.germany.eu.net--could only find source)?

2.)

The reason I am trying to compile PL 3 is that the gdb 3.6 PL 2 that I have been using for some time (without incident) has suddenly ceased to work. It behaves normally except that it refuses to stop at most of the breakpoints that I set. It will still stop at some (apparently randomly), but it just flies by most.

Typing "info break" lists all the breakpoints and gives their status as "enabled", but when the program runs, they are generally ignored.

I first noticed this behavior after I modified my system temporarily (to test a ghostscript bug) to run mint from the auto folder and load toswin as an accessory. Normally I run mint from a shell when I need it. After I changed back to my normal configuration, I started having this problem.

To make sure I was really back to my normal configuration, ran a configuration script I wrote that sets everything up. The gdb problem remained.

I thought that something had become corrupted, so I removed from my hard disk all files having to do with gcc and gdb (executables, includes, libs, ... everything) and then I restored them from the original zoo archives. The problem persists.

Does anyone have any idea at all what could be causing this?

Thanks,

-Tim Gallivan

Source record: 199815

Whoa, is there ever some bullshtein floating around about Calamus and its font protection scheme(s).

I'd be the first to admit that Calamus fonts seem pricey compared to the vast offerings of the DOS and Macintosh worlds. However, the scheme they use to ensure that the fonts you buy only work with one version of Calamus does not (I repeat -- **NOT**) require you to buy the same set of fonts again when you upgrade your Calamus. Your upgraded version arrives with exactly the same serial number as your previous version, and all the fonts you have will work perfectly with that new version. I should know -- I've had five upgrades to Calamus in the last three years, and my original fonts work just as well with Calamus SL as they did with Calamus 1.09N.

Hi Steve , on 04 Oct 93 <21:46:48> you did write :

>> Phone (UK) 0602-410241 , the same place incidently that produce ST
>> Application's ... the best Magazine for the serious Atari user !
SB>
SB> ST Apps... I've heard of it but WHY is it so good? What subjects
SB> are covered, for example?
Heard yeah but not seen .... because it's subscription only AFAIK in the UK You must have seen the regular posting's on Turbonet by Mark Baines ?
He
writes the Comm's regular features ..speak to him if you want to get a
mini
sub of three issues which is on offer ATM.
It is good because it's feel is much more 'user' inspired than the
glossies
which IMO are much more jouranalistic exercises,if you get my drift
here.
Not that I don't enjoy reading them but App's just seem's to cover everthing in a bit more depth,in particular if you're used to the outpouring's of ST Format.

Subject's covered obviously vary from issue to issue but you can safely say that it won't include 'Games'.The issues i've seen (I'm a recent convert but I used to catch sight of the odd issues from other's) have covered MIDI (they had a six part guide to Cubase about a year or two ago that I liked), DTP,Programming,Comms,CAD.....Application's,hence the name
:)
Regular features ATM are News ,CAD,DTP,Programmer's Forum,On-line,Forum (general user info exchange), Grafix Art's,PD update(obviously linked to the STclub) and Falcon setcion's.

What more can I say ? get a sub !

Graham

Source record: 200039

If you want to read the manuals, you'll have to know German, but the help system is very good, and it's
in English, so if you are familiar to the language C, you shold have no problems. I don't quite remember
the price, but I think I paid 300 DM a year ago. I would recommend you buying the program from
SoftHansa. Here is the address:

SoftHansa
Untersbergstrasse 22 (I think)
8000 Munich-Giessen 90 (or something like that)

There is also a bundle with the program ACS (Application Construction Set), which really is a great
program. When combined with Pure C, you can make stunning GEM applications in practically no time. ACS
is like an overworked RCS, which means that you also define windows, icons on the desktop, mouse
pointers, menues iand dialogs in windows, and so on. There is also a huge library that takes care of
most of the handling of the GEM program. It's really great, especially version 2, that includes a text
editor that you can use in your own programs.

If you want to make GEM programs, Pure C is definitely the right program for you. If you don't want to
use GEM, it is still one of the best compilers on the market. Only Gnu C is better in some ways.
Lattice C is dreadful compared to Pure C.

>BTW: the name 'BlowUP' has nothing to do with 'just blown the video chip' :-)

Are you sure? I've got a Spektrum graphics board and it sometimes shows weird pixels in wrong colours (like green and purple in 1 bit monochrome mode!). I heard this happens with other graphics boards as well, so I suspect this is how the developers of the `crazy dots' board found that name. So I wouldn't be suprised if the developers of BlowUP actually found that 810x610 blew up the chip, but in 99% of the cases, 800x600 was OK. When they couldn't find a nice name, they decided (after drinking cans and cans and cans of beer) to call it BlowUP.

Please forget PL3, it was incomplete and didn't work. I have just
uploaded PL4 to ftp.germany.eu.net, it should soon be available in
pub/comp/atari-st/mint, sources in gdb36p4s.zoo, binaries in
gdb36p4b.zoo. Please try this. If it's not yet installed, you can find
it in the incoming directory.

Andreas.

There is a program called Riemann II. It has been reviewed in the
c't (German compter magazine) in a late 1992 issue. I don't have
it, but I saw it on computer shows, it looked just like
Mathematica to me. The c't review says the same.

>Yes, there is a Maple for the ST line, but it is only version 4.2, without

I have repeatedly heard that the competition from Riemann II has
caused the developers of other math programs to lose interest in
the Atari market. Riemann II does run on a TT.

I guess it wouldn't be too hard to use FIFOs instead of sockets. Another problem would be the size of Xlib (considering that MiNT doesn't have shared libraries).

Thanks for the info, re: Atari Works...

>I think it does, but I'm not sure. I never have figured out how to
>use the clipboard in other programs...

I think the specific programs have to support the clipboard. For instance,
with Edhak, you can Paste from the clipboard, or cut/copy to the clipboard
from the various "Block" commands. With CoNnect, you simply drag over
the portion of the window you want copied, and then RightButton-LeftButton
to paste that section - this is especially useful for me, since when
I use the "Reply" option on our local RN, the reply-to path isn't
quite right (so I drag over the actual user's address (probably have to
scroll up a little) and then paste/insert into the proper place...

The combination makes a nice pair - say on an online conference you
could copy someone's comments to the clipboard, and paste into Edhak;
then make your replies, and either paste it back to the clipboard
(or use the Send to Serial Port (name?) command)...

Hmm, it may prove worthwhile to keep track of those programs that
do support the clipboard. Why not - if anyone knows of any programs
that do, send me their names (and what can be clipped) and I'll try to
make a list of them. (I'll also have to check on which CPX's
handle the clipboard functionality)...

The NeoDesk 3.02 -> 3.03 patch is available for download on GEnie, Compuserve,
and probably just about any other ST public BBS. I'm pretty sure it is also
available from the UMich Atari archive. 3.03 does work with MultiTOS. 3.04
is only necessary for users of Geneva, and is only available with Geneva.

From: csullogg@cc4.crl.aecl.ca
Message-ID: <7OCT93.08595221@cc4.crl.aecl.ca>
Source record: 199859

I had a battle with Atari over the fact that EVERY product (STe, LYNX, PC3, ABCs) that had been promised PRIOR to the Christmas sale period actually appeared on the market AFTER Christmas.

When I asked what Atari had against dealers capturing Christmas sales, I was simpley told that I was not promised anything as a dealer.

So, if the Jag comes out after Christmas, anyone who is surprised by this needs to study a little of Atari's marketing history.

385. OS/2

Source record: 199861

FOr years and years I have been one of the most vocal opponents of Messy-DOS and WINDOWS kludge. Recently, I attended the Ottawa Government Computer show and had a one hour demo of OS/2.

Loved it. Even though I now work with a TT/TTM195 during the day and a Mega4ST/Reflex (1024x496) in the evening, OS/2 has finally tweaked my interest in the PC world.

Do not want a flame war; only pointing out that this die-hard Atari (first ST was Dec '85, owned a MegaST, MegaSTe, 1040STe, TT, SLM804, SLM605) and Mac enthusiast (only gave Spectre, not a real Mac) finally sees some nice things in the PC world. OS/2 has a nice look and feel (desktop) to it.

BTW, my Geneva package should arrive this week so it will be some time before I will actually consider switching platforms.

|> How much do you people think I could get for a 1 1/2 YO Atari PTC1426
|> and a 1 YO Atari TTM195 monitor?

Sorry, I don't know. Perhaps you should look in the ads of an Atari computer magazine and see there for which prices used monitors are sold.

|> I would like to get a multisync for a future graphics card upgrade.
|>
|> Also can any of the multisynchs do the TT high rez? I know the NEC's have
|> a 135Mhz bandwidth.... ?
|>

There only comes one monitor to my mind that is a multisync AND can handle the TT high resolution. It's the EIZO 6500/6500M, which I own myself. I don't know any other multisync monitor that is able to display the digital ECL signal of the TT high resolution.
The EIZO 6500 is the most universal monitor you can get for your TT, as it can display both analog and digital ECL signals (one digital and two analog inputs - you can select between them with a switch at the front panel of the monitor). You can connect the EIZO to almost every computer - no matter which one you might own in some years.

On the other hand, this monitor can only display b/w or grayscales. And the large screen of 21" results in a very high price.
So if you definately wanted to display color resolutions, this monitor would not be the right one, as well if you couldn't spend such a lot of money for it.

There still is another solution: You could also buy a common multisync color monitor that has an analog input and a bandwidth of 125 MHz. Then you needed the ECL/analog converter of Hard&Soft (Germany) that creates the appropriate analog signal for the digital ECL signal in TT high. There you are: All TT resolutions on one monitor.

Unfortunately, this converter is very expensive. The last price that I saw for it was 389,- DM, which is about 235 US$ (1 US$ = 1,65 DM) ...

If that solution also is too expensive for you, you can buy a graphics card that is able to go up to 1280x960 (in >= 66Hz, I would recommend) so that you wouldn't need the TT high resolution any more. This probably is still cheaper than buying the ECL/analog converter.

Btw, 1280x960 pixels on a 17" monitor isn't that good to work with a longer time. So keep in mind that high resolutions also require larger monitors.

Hope I could help you a bit.

Chris.

389. Mega STE TOS version --- THANKS!!!

Newsgroup: comp.sys.atari.st
Date: 1993-10-07 13:45:12 UTC
From: richardson@vaxr.sscl.uwo.ca
Message-ID: <1993Oct7.094512.1@vaxr.sscl.uwo.ca>
Source record: 199864

Since I received so many replies to my post concerning the differences between 2.05 and 2.06, I figured a general "thank you" is the way to go!!! Thanks to all those who replied; the consensus seems to be that there is little to worry about with a mega STE w/ 2.05. The most often mentioned problem was a problem with producing PC compatible 1.44 meg formatted disks (could this be corrected by using a program that formats 1.44 floppies?). I don't HAVE a 1.44 meg floppy, and I don't believe early mega STE's do either...so this is not a problem for me :^) A mention was made about RS232 problems...if anyone knows any details about this I would appreciate the info. Anyway, thanks again to all who responded...I find out today or tomorrow whether i'm getting the computer (one of those weird closed/secret bid deals with secret reserve bids).

Hi,
when running TOS or MINT processes who require input, every other character is printed black on the screen (using MINIWIN or TOSWIN14). Any guess about the reasons?

Johannes

Well....I myself am a Mathematica User..and I must agree it is quite good,
but I am still a very dedicated Atari User (and always will be..). I haven't
had the pleasure of testing or trying it out...but I have heard that in
Germany there was indeed a program that was called RIEMANN II which infact
did and/does things very similar to either Maple or Mathematica? Did you
look into RIEMANN II?

Just a suggestion ;|)

Okay, the filenames are:
spacejnk.readme
spacejnk.zip.01
spacejnk.zip.02
spacejnk.zip.03

The three parts are one big ZIP file divided by three.

>argument invalid.

Yes I agree that there is other software available but we are really
talking about programs written for the 'profesional' market and in
that area there is really only two active outlets. Passport was in
there for a while but I have been told that their sotware is no longer
supported. The software that is available for less than $500 often
has quite sophisticated features but the usefullness of the program is
often killed by the lousy interface - a 'fast' interface is one of the
most crucial elements in software of this type. You have to be able to
get results quickly and easily when your writing music. Now that may
seem like a reasonable thing to ask but you have to pay big money to
get it.

Source record: 199884

You could also try using ARJ to perform a volume backup, while specifying the disk size to be 1/2 the size of the msa file. However you might need an older version (under DOS?) so that you can unarj them with the older ST versions...
You could also try DC-FORMAT to format your disks to 800K (just don't use sector skewing!!)...
I have had the same problems with large files... My last resort is to copy these files onto a 1.44 disk and use a friends MEGA STE to unpack them.

I have found it!
Look at ftp.uni-kl.de in the directory "pub/atari/incoming" (or later:
"pub/atari/falcon") for the program mjuzakk.zip.

I have not tested this program yet. By the way: there is also the falcon
version of the Protracker in this archive...

Ciao, Heiko.

Message-ID: <1993Oct7.163325.121280@embl-heidelberg.de>
Source record: 199873

I have been searching since the start of this year, for 2 applications
for my 1Mb Atari Ste. I would appreciate any recommendations for the following:

1. A word processor that approaches MS WORD. I have read reviews of the well
known products eg Redacteur, Calligrapher Gold. One particular function
I have never seen emmphasised is an UNDO facility. Certainly the demo of
Redacteur I have doesnt seem to have one and I managed to change the
font for the entire sample document I was using as a trial.
Table handling is another function I like to see credited.

2. A music score editor that will playback through the Atari. Most I have
seen seem to use only midi. I just want the facility to verify my score

Thanks in advance for any advice

400. STFM Hires monitor : advice sought

Newsgroup: comp.sys.atari.st
Date: 1993-10-07 15:59:43 UTC
From: tjl@siva.bristol.ac.uk
Message-ID: <CEJB3J.3pD@info.bris.ac.uk>
Source record: 199874
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st

Hi

I want to add a hires monitor to my 2.5MB 520STFM. There currently seem
to be a number of options including:

(1) VGA mono monitor internally adapted to work in atari hi-res mode.
(2) SVGA mono monitor with some kind of external adaptor.

(1) is definitely cheaper but it is not clear from the information I have
whether it is a trivial excercise to convert "back" to VGA if I ever upgrade
to Falcon or PC (I hope I never have to consider this but...).

I am interested to know what is involved in converting a mono SVGA monitor
to work with the ST. Does anyone out there know?

Cheers

There's a great little utility over here that goes by the name of Mega-Depack, written by some guys up in scotland. It depacks almost every packer on the ST of if not tells you what you need. I got my last version from atari.archive.umich.edu and its filed under somthing like mdepck212.zip or somat similar. Have Fun!!

thylander> AES, which explains why it needs the MiNT-Kernel to
thylander> multitask TOS-programs. Hence it can't be a faster OS than
thylander> MultITOS...

Well, what about PowerDos? There was word that a new version was in the works to work especially well with Geneva. THAT would be a nice system! PowerDos seems really great. The only thing is, I can't figure out how to run it from the lack-of-instructions which came with it...

Still, Geneva alone sounds like a fantastic program! I just wish it wasn't so expensive!

You appear to be in the U.K., well last I knew SS or Ladbroke had something
in that direction with an RGB to VGA converter thingy...however you still
only get the standard Atari resolutions...which are pretty colorless..

What I would do is get a NOVA BOartard....a megabus adaptor and plug that
right into your ST/STE or future TT maybe even (or PC) and that can output
straight onto regular VGA, SVGA or M/S Monitor's

>running ;-(

Stefan, I don't know where you are getting your Gembench test results from
but I own Gemulator 3.0 and can attest to its real-world speed and its actual
capabilities. On my 486-33DX, I consistently achieve speeds greater than an
8MHz ST, I assure you (I could post some benchmark results, if needed).

On a 66MHz 486, you should achieve speeds at least as good as a 16MHz MSTE
and in some cases, better. Much of this is dependent on your pc's hardware,
of course. A fast video card will help a lot. I've got a 66DX2 upgrade on
the way so I'll soon know for sure how much that helps.

To be totally fair, some things ARE slower with the Gemulator; floppy disk
access, for example, is _much_ slower than on a 'real' ST, at least on my pc.
But still, I've found the Gemulator to be a very usable product. Not enough
to make me want to exchange a real Atari for it but certainly attractive to
increase the utility of my pc... and it needs all the help it can get! :)

|>I'd buy a copy of 3.0, that's for sure.
|>
.. but instead you'll just carry on using your cracked copy of Cubase 2.0
I suppose? I guess if you're paranoid about saving to disk then the risks of
loosing data due to bugs etc in the cracked version aren't too great.
I guess you also realize it is ILLEGAL but then again many people do things
that
are illegal all the time. However as a musician I hope you have some
appppreciation of copyright and royalty issues?

I know top end sequencers are priced somewhat stupidly. Luckily I have a
reasonable job and shelled out for Notator because I wanted to make more
effective use of the little time I have working with music (I was using PRO-12
before!). But have you ever considered writing your own sequencer program?
How many person-hours do you think you'd invest in it...?

btw I saw Notator Logic running on Atari yesterday...

Attention!!!!
The falcon protracker is a hacked together version from me. It is only tested on RGB monitors and will probably not work on VGA as I write directly to the hardware to set the lower overscan.

409. Atari ST System For Sale (lower prices)

Newsgroup: comp.sys.atari.st
Date: 1993-10-07 17:49:56 UTC
From: bmaraldo@watserv1.uwaterloo.ca
Message-ID: <CEJG79.KnL@watserv1.uwaterloo.ca>
Source record: 199900
Cross-posted to: misc.forsale,comp.sys.atari.st,kw.forsale,ont.forsale

I have to sell this system or else it will just sit around. So, I
have lowered my prices. These are firm (unless I have to ower them again :-).
Seems a lot has changed with used atari hardware in last little while. Here
goes...

Mega ST4 (w/ keyboard and mouse) $260
115Mb hard disk $260
SM124 monitor $75
Spectre GCR v3.0 complete $220
STraight FAX + 2400/9600 modem $160
Calamus DTP system (includes Calamus 1.09N, Font editor, Word Writer ST, fonts
and clip art, all manuals and original disk) $200
other software titles available (mark williams C, minix, vip, tempus ii,
font utils, etc).

If you buy the complete system I will not reformat the hard disk and leave all
the software on it and also give you the original disks and manuals. All prices
are in US$ (* 1.35 for CDN$). Shipping is extra.

No-one has yet pointed out that the 299 dollar upgrade includes
a dongle with extra MIDI outs on it thus saving 150 dollars or
whatever it costs for the Notator expander.

> - A more compatiable and fast multitasking OS than MTOS.
> - An updated AES simular to the Falcon's TOS 4.

As far as I've heard, Geneva is NOT an OS, it's just a new AES, which explains why it needs the MiNT-Kernel to multitask TOS-programs. Hence it can't be a faster OS than MultITOS...

> - TOS programs can run in a window on the desktop.

NOT multitasking!

> Geneva is, in my option, the best multitasking environment for
> Atari computers. It blows MTOS out of the water with its speed,

> Falcon. Geneva is suppost to be 100% compatiable with MTOS-specific
> programs and even runs programs that MTOS doesn't. (ie. Warp 9
> v.3.75)

Well, it still needs the MiNT-Kernel to multitask (not taskswitch) TOS-programs and it's not preemptive....

Try running Notator Logic without the manual! (Good Luck!) Even with
the manual, I find Logic quite daunting. Logic would benefit greatly
if it included a tutorial and quick reference command card. As it is,

the manual was written for the mac, with a few additions that pertain
only to the atari.

>(2) Compared to other sequencers I have tried, Notator is pretty rock solid.
>Any crashes I've experienced are generally due to hardware problems (eg bad
>earthing on my extra-ram deluxe) not s/w. OK Notator 3.16 has a few VERY
>annoying bugs. If you are running a cracked copy then it could go down on you

I've found both Notator 3.1 and 3.2 to be a little finicky about which
desk accessories are run with it. Sometimes held notes, or lockups
occur when some acc's are present. I try to run Notator with as
little acc's as possible, and everything works great!

>(3) It is also illegal to pirate such s/w

Yes indeed! Also, Notator requires a dongle to operate. I suppose a
cracked version wouldn't though..

The only MiNT utilities that will work with Geneva are ones that do not check for and/or require the presence of MiNT itself. We had planned to have the first version of Geneva work with MiNT, but because we were already overdue on the release date, and MiNT compatibility was going to take longer than originally projected, the current version is not compatible with MiNT. MiNT and Powerdos compatibility will be added in a future version.

Note, however, that the TOS in a window program which comes with Geneva will run almost any TOS program without a problem, and WILL let you switch to other tasks when the TOS application stops for user input.

>... Resolution can be easily changed through the Taskman.

>the price. Quite a program!
>

A few problems here...
First of all, the bug you mentioned is not at all related to Geneva, it is purely a problem in the resource files of NeoDesk version 3.04 only. We are going to upload fixed versions of the NeoDesk 3.04 resources, either Friday, or early next week. The only people who will need these new .RSC files are people who bought Geneva at the Glendale show. The newer version

will be provided to everyone else. Similarly, the Geneva patch which we will be uploading at the same time will upgrade people who bought Geneva 1.00 at the Glendale show to version 1.01. It will NOT upgrade the .95 beta version. People who bought the beta version will be automatically recieving there 1.01 in the mail, or via UPS over the next couple of weeks.

Finally, Geneva does not cost $99. The list price is $69.95. MultiTOS lists for (I think) $59.95. Once NeoDesk 4 is available (probably December at this point, sigh) we will be doing a special bundle of BOTH packages for $99.95.

If you have any other questions about Geneva, please write to me at my Internet address, Dan on GEnie (GRIBNIF), Rick on Compuserve (75300,1131), or call us at the office.

Sorry to double post on the same article, but I forgot to mention one thing about this point. The current version of Hotwire, and any other shells, such as older versions of NeoDesk, which use the Pexec() call to launch programs will most likely work with Geneva, but any programs they start will be in singletasking mode, and they will only be able to launch one application at a time. The changes that must be made to any existing software to make it compatible with Geneva in this way are the same, and actually somewhat less involved than changes necessary to make things MultiTOS compatible.

Not necessarily; I've use APL on my vintage ST for many years,
especially
in my graduate p-chem and statistics coursework. It's a very
mathematical
and symbol-based language, ideal for linear and matrix algebra
numerical
compuations of small to moderate size. It does not do symbolic
evaluation.
The learning curve is certainly no worse than that for Mathematica.
One
of the more useful applications I've bought for my Atari.

426. Questions Esp. About Samplers

Newsgroup: comp.sys.atari.st
Date: 1993-10-07 22:27:23 UTC
From: ross@refine.enet.dec.com
Message-ID: <1993Oct7.212221.5757@nntpd.lkg.dec.com>
Source record: 199653

I'm a detached Atari user (I started with my 2600 and have ended with my basic Atari 1040ST system back in '89 before finally losing my brand loyalty and buying a SEGA Genesis close to 3 years ago. Enough of my history...) As I was saying, I am a detached Atari user with a few questions whose answers I have not been able to locate in backlog messages:

I am in the market for a sampler and would like to go the computer route. The first option I would like to explore is getting a good sampler and editing software for my Atari 1040ST. I would like to sample directly from my stereo mixer and edit those samples in various ways (loop, reverse, pitch, echo, edit the actually sample, etc.). I remember a STPro or something sampler for the ST, and actually used the cheap model before, but the software was terrible. Does anyone know of sampling hardware and software that will be capable of doing any of the above on the 1040ST?

Secondly, I hear the Falcon has a DSP chip, which produces CD quality or better sound. Is there any sampling hardware/software available for this system yet, esp. one that takes advantage of this chip? If so, is it any good? I haven't been around, so can someone quote some of the going prices for the Falcon, in it's different configurations? If it can sample, I'm may be in the market of getting one. Also, does it have MIDI ports like the ST? Another thing I should mention: it would be a plus on any sampling software that lets me define 'banks' so I can have more than one sample in the computer at once, but play them at the same time.

Finally, I will be stuck in the Boston, MA area for a while. Are there any Atari dealers in this area, particularly a dealer that may have the Falcon? I'd really like to check this computer out. If I trusted Atari support, I'd probably have one right now, but... Any arguements on why to *get* a Falcon? (I'm sure there are plenty if Atari loyalty runs a deep as it did when I was heavily behind Atari :) E-mail replies would be great, but I do read this news group too. Thanks,

Theron

427. Calamus SL for sale!

428. question about uniterm

Newsgroup: comp.sys.atari.st
Date: 1993-10-07 22:45:47 UTC
From: dvasilef@silver.ucs.indiana.edu
Message-ID: <CEJtwC.G1E@usenet.ucs.indiana.edu>
Source record: 199652

Here's a tricky one...

I'm running Uniterm V2.0e 015, and I have my default term setup to use auto-wrapping. However, when I use alt-f2 or alt-f10 to toggle 24/49 rows, 80/132 columns, it automatically switches to NO wrapping. I know it's just an inconvenience for me, but can I fix it to not switch?

By the way, is Simon Poole (author of uniterm) still around the net somewhere? Is there a new(er) version of uniterm around?

Thanks
David

As mentioned by someone else, X is not Unix specific. X is meant to
be OS transparent. However, if one wants Xlib and Xt on an ST,
then some OS's are more suited than others. One can develop
an X server implementation for an ST w/o Xlib. All that is needed
is that the server understands the X protocal. If you want
the ability to port X clients to run on a ST, than Xlib needs
to be developed for the ST.

Motif window manager (mwm) is not part of the standard distribution of
X by MIT (to the best of my knowledge). Motif is licensed by OSF.
Many vendors have licensed Motif, and therefore it is available on many
workstations (even Sun switched over to support Motif). I do not
believe that Motif is publically available.

BTW, 'twm' stands for Tab Window Manager, and it is distributed
with X.

432. Converting Degas (PI1) bitmap to IBM

Newsgroup: comp.sys.atari.st
Date: 1993-10-08 00:00:23 UTC
From: gburland@shl.com
Message-ID: <292ainINNpek@technet1.shl.com>
Source record: 199658

I am looking for a program to convert Atari ST Degas bitmaps created in low-rez (*.PI1) to some sort of common IBM bitmap format, such as *.PCX or Windoze bitmaps (*.BMP). Does anyone know of a program that will do this? It must be an IBM program as I no longer have access to an ST. (It's many miles away), but I have all of my degas bitmaps on IBM formatted disks. Any Help would be greatly appreciated.

Greg

>OS/2 has a nice look and feel (desktop) to it.

You know, it's funny you mention this because I have an Atari 1040ST which
I have had for 7 years. However, until just last year, I never even WANTED to
get a PC even though all the support was there for it. Last year, I was into-
duced to OS/2 on the UIUC campus. About 2 months later, I bought my first
Intel PC (486dx/50). I've been running OS/2 on it since. I think OS/2 is
a magnificen piece of work, and if you are thinking of switching platforms,
I'd be glad to help in the transition.

In the mean time, anyone want to buy my old Atari? It's going really cheap
now. Mail me.

You didn't include your source, but I'm sure this "news" item came from ST REPORT. Of course, ST REPORT is the National Enquirer of the Atari world, and its editor is out to slander Atari any chance he gets.

I'd take this "news" with a MASSIVE grain of salt.

Subject line says it all. I was just told that (as far as anyone can determine), CBS THIS MORNING will be running a segment on the Atari Jaguar on Friday, October 8, 1993. The crew from CBS went up to Sunnyvale a while ago and stayed for about six hours. How much of that will be on the air is anyone's business, but it should be interesting.

Check your local TV listings for channel and times in your area.

Yep, it is a nice OS. I think the beauty of OS/12 lies in how well it mixes
the "feel" of the ST or Mac with the power of a UNIX-type system. I think
NeXTStep is more advanced, but OS/2 seems more practical.

(and OS/2 runs DOS and Windows 3.1 apps in its current form)

>Do not want a flame war; only pointing out that this die-hard

>OS/2 has a nice look and feel (desktop) to it.
>

Well, the onyl disagreement I have is with the "look and feel".
I think OS/2 is counterintuitive in many ways for someone used to a
Mac or ST. Windows is the same way, but OS/2 moreso. An example is
how they go about creating "shadows" (links) and copies... and also, how
everything is run on top of an expandable desktop (nice idea, but it
can get out of hand) and it seems (after 2 weeks of working with it) to
have no facilities for neatly arranging the icons where i want after a
sort of arrrange takes place.

Who would want a TT today? Come on people, its time to move on and join the civilized world. Atari ST's, TT's and Falcons have been left behind and is not getting the proper nourishment from Atari. You are missing the use of Quicktime, multimedia and cdrom technology that is not available on the Atari. Macs and PC's have surged a head..

443. POV-Ray 2.0 timings

Newsgroup: comp.sys.atari.st
Date: 1993-10-08 03:54:06 UTC
From: cherborth@semprini.waterloo-rdp.on.ca
Message-ID: <H.eg.YvLIWTvkYx6@semprini.waterloo-rdp.on.ca>
Source record: 199744

Here are some feel-good numbers for you folks that think I have nothing good to say about the Atari platform... ;-)

POV-Ray 2.0 was released this week (yahoo!)... POV-Ray is a really great free raytracer, and version 2 has some serious performance boosts...

I compiled POV 2.0 for OS/2 at work using GCC 2.3.3 (optimised) and for my ST using GCC 2.4.4 (optimised) under MiNT. Here's how long it took me to trace a very simple scene (basicvue.pov; an orange sphere on a blue plane):

'386/33 8M RAM, OS/2 2.1 - 1 hour 40 minutes, 20 seconds.
'486/33 28M RAM, OS/2 2.1 - 0 " 0 " 33 seconds. (!!!)

Atari ST, 4M RAM, MiNT 1.08 - 1 " 45 " 36 seconds.

That's right folks, the 8Mhz 68000 was _almost_as_fast_ as the '386/33. Why? I'm not sure; perhaps the TOS version of GCC optimises better, or perhaps our math library is faster at this sort of calculation.

Now, for those of you who think a Falcon030 is the same performance as a '486dx2/66, it would've traced the image in about 20 seconds. The Falcon would probably do it in 50 minutes (and that's being generous).

Oh, what POV-Ray options did I use? +w320 +h200 +q9 +a0.3 +ft (320x200x24-bits, save as a TARGA file, highest quality, best anti-aliasing)

Actually, archive.wustl.edu is a mirror of archive.umich.edu; it is usually easier to gain access at the St. Louis site (Washingon Univ.). An alternate pathway to the same archive which often works is mac.archive.umich.edu

Someone pointed that out recently (I forget who), I tried it the last time I got rejected at atari.archive.umich.edu, and it worked just fine.

You know, I was just talking to Wolfgang (author of CoNnect)
about adding Unix Windows capability to CoNnect. However, he didn't think
that too many people would be interested (and left it out to keep the
executables smaller).

I was just wondering if this is true? How many of you would like
to see UW implemented on CoNnect...and would you be more likely to pay the
share-ware fee and register (for who haven't yet...)?

>>- somewhere in the readme of TCSH is stated that cursor up is or can be mapped
>> to previous command (CRTL-L). How?

Hi,

I use:

```
bindkey "^[A" up-history
bindkey "^[B" down-history
bindkey "^[C" forward-char
bindkey "^[D" backward-char
bindkey "^[E" list-choices
bindkey "^[I" complete-word
```

in my csh.rc. This maps the cursor keys to the proper tcsh manipulators (as well as the ESC key...).

>Graphics Card..once again ;)

>And what is the advantage of that? You can use one of the best and most
>respected graphics cards in the PC Market not only on your TT or Mega STE
>but also on your PC if you wished to do so, considering the way the market
>is heading...the SUperNOVA allows you to go both directions. If you read the
>CICERO Extrablatt, they commended that idea and concept.

Sorry, but I've never heard of "CICERO Extrablatt" <kindof sounds
like something from Hitchhiker's Guide to the Galaxy>. It sounds like a
good idea - being able to use PC cards. However, which cards are
compatible with my present hard/software? Could I buy my own IBM card,
put it in my black box and just get a software update? Does the SuperNOVA
come with a more complete manual (mine has the last couple of chapters
missing - just has the titles...).

>>resolutions, it is faster than the built-in video of a TT. It is pretty
>>solid in coping with other software. The only slowness I have ever

>The added strenght of the NOVA is it's compatibility and software that
>comes along with it, eg. ReSWTICh that allows you to switch the
>resolution and colors without a reboot. Also it has a very fine VMG allowing
>you to produce whatever resolution you like on your board.

Now that is something I didn't know. From the description of the
manual, it sounded like it was just a rebooter. I had been wondering how
you would get the card to have more than one resolution running at a time
(as was described in the manual).

>>I'm happy with it, I just wish I had a better monitor <grin>. I almost

>its editor is out to slander Atari any chance he gets.

Interesting to know you think this is true, RJ, while Atari obviously
does not agree with you.

With all the lawyers and all the money they've thrown at suing Nintendo
over every little thing, Atari Corp has *never* brought action against
STReport for libel.. (that's the applicable term, not slander).

Atari might not LIKE what STReport says, but they can't prove it's
libelous, or as badly as they hate it, they would have slammed it hard
legally.

So do YOU have proof that Atari doesn't have, to make public charges like
that..?

>And it's the zero-th time I've heard it can handle 4MBit simms!
>Or are you talking about a third party memory upgrade card?

Thats because most people with TT-RAM-bare systems are asking how to upgrade their memory. What is being described is the Atari TT-ram board that holds either 4-1MB SIMMS or 4-4MB SIMMs - but you still need to buy the board and Atari doesn't (to my knowledge) sell it unpopulated. In fact I think you can only get it if your system comes with it (can't buy it separately...but who knows what dealers will do after if leaves Atari...). Of course, Atari doesn't send along a nice little one-page description of how to change the dips to have it handle 4MB SIMMs because that would imply you are breaking your warranty - and they wouldn't want a travesty like that to happen. <1/2 grin>

Of course there are 3rd party vendors that sell boards with 8 or 16 banks that hold up to 16MB SIMMs...(a certain 256MB comes to mind...)

BTW, does anyone know how to upgrade to the Medusa? I thought they were going to publish the '040 upgrade in some magazine...probably wasn't in english though. Anyone have an English version of the Medusa upgrade schemes?

Not quite... There has to be _more_ software availabe today and the quality is
much better then six years ago. The rest is true.

> who complains is just whining.

I wouldn't exactly call it "healthy", more like "still surviving". Atari Scandinavia closed office last summer. Hopefully the Jaguar will see them regain some of their lost presence.

> I know when it came time for me to look at a more powerful computer,
> that nothing Atari makes was in the running, and unfortunately, this
> seems to be the case around here. The Falcon can not hold it's own in
> it's price class, no matter how much people would like it to.

I agree that the price should be lower but looking at the competition, there were no real alternatives, at least not for me. Nothing that I found could give me the same performance at a lower price. The Intel clones are fast on number crunching but offers little exitement on anything else. I also had a lot of software and many years of knowledge that I would loose if I jumped ship and perhaps most importantly, no other platform seems to have the strong user following that the Atari community are lucky enough to have. It's a great support in the very true meaning of the word.

> Atari had released math libraries in the Dev knit that took advantage
> of the DSP, then you might make a case for the added speed of the DSP
> making a difference, but when extra thought has to go into programming
> for it, especially on a multi-platform piece of software, I can
> guarantee there is not enough money in the Falcon sales to do a special

There are however some Falcon applications that you will probably never see on a clone this side of $3000+.

> port Anyway. To make a long story short, can _any_ Atari enthusiast
> honestly tell a North American who was disappointed with Atari support
> 6 years ago that things have improved now? If you're lucky enough to
> have a dealer nearby, (s)he's likely to be dedicated and enthusiastic,
> and you'll get good service. If you don't, I hope you like mail

Improved it has not, but hey, if you're happy with your computer and you know where to turn to buy your software then so what? This is not IBM, Apple or Microsoft we're talking about. I would never expect Atari to provide any large support, nor would I like paying them to do so.

The only way Atari can improve on the dealer situation is to make and sell more computers. The Falcon is a good step in that direction. I hope to see the price come down on the current Falcon and then to see a "high-end" Falcon040 in a new

case appear to satisfy the "power users" because I think this is the only way to go if Atari wants to stay in the computer market other than as a very small nisch machine.

Part of the problem is that the market has gone from home computers to business computers. The avarage clone is surely no ideal home computer but it has become one thanks to it's low price. Windows has done some job of making it more user friendly but generally I've found that working with clones is a constant pain and stryggle to make it do what I want and not what it thinks that I want.

> As a former contract programmer for an Atari developer, I can also
> say that Atari isn't very helpful there either.

I understand that the dev docs have been awful in the past, but things like the new developer CD-ROM tells me it may be better in the future.

> musicians who know how to run one program on their ST, and that's it.
> Not a lot of inspiration for someone trying to program something new
> and different,

I think most musicians see the computer mainly as a tool for a specific task. If he has found a piece of software that does what he wants, then why bother looking for more? Some of them may have a more general computer interest but most are probably just using them to get their job done with as little fuss in as little time as possible.

>for use as a terminal for my situation ?

Hi,

It sounds like you may have something wrong with your
configuration. It sounds like you are connected to a serial line and not
to a "modem" so you don't need to dial or anything. Just make sure that
the terminal window you have open has the right modem port selected, the
right baudrate (probably 9600 is standard for you system -ask a technical
person at your site what speed you should set your serial port to), and
that your cables are good. Don't be afraid to ask someone to check if
your cables are defective. Basically, any cables that would work on an
IBM will work on the Falcon. Once those are set up right, you should be
able to just "hit return" like everyone else and get a prompt (just make
sure you have a terminal window open).

The patch on a.a only works on USA versions of Neodesk. You *must* get
the upgrade disk for the correct country!

I have the UK upgrades from 3.01 -> 3.02 -> 3.03. Can I post them to
a.a legally? They are of course, *useless* unless you have a
registered copy of Neodesk.

Obviously you are talking about the first Warlords which is an older game.
Warlords II came out not TOO long ago, and has VGA graphics, and Sound Blaster
support. The game is comletely mouse driven, and has digitized effects and
such.

> (Net)

A (small) guide to ftp.

type ftp site_name

type ftp for a user name
type in your address for a passwd.

once in you'll probably want to type bin (to go into binary mode)
and hash (to have screen output whilst downloading (prevents ideal outs!))

now change to the directory you want
eg cd /pub/atari/falcon

use dir to see a list of the files

use get filename (this gets the file !!!)

use bye to log out!

BYE

ps two good sites:-
ftp.uni-kl.de
atari.archive.umich.edu

Tom.

ftp.tu-clausthal.de:/pub/atari/misc/pgp23ast.lzh

This are only the *diffs* to the original source. You will need
ftp.tu-clausthal.de:/pub/unix/security/pgp/pgp23srcA.zip to
compile it with GNU-C.

Bye,
Wolfgang.

470. Re: Falcon + Space Junk Demo = WOW!

Newsgroup: comp.sys.atari.st
Date: 1993-10-08 12:13:06 UTC
From: imr@cs.bham.ac.uk
Message-ID: <1993Oct8.131307@cs.bham.ac.uk>
Source record: 199696

Now I've got a bit of a problem with this Space Junk demo, I got it home on 3 disks, wrote a prgogram to concatenate it all into one. I then found out that my ZIP decompressor (STZip) can't cope with a 4.2Mb ZIP file! So then does anyone have one that can ? My options as far as I can see are get more memory in my falcon, get a better ZIP program or get some virtual memory program.

Well there ya go, how did everyone else extract it ??

Many thanks

^^^^^
I believe Atari was one of the first Computer with CD-ROM support,
remember the CDAR 504 (or somethin like that). GEMVIEW supports
Photo-CD if i remember right.

And the FALCON was the first low end computer with DSP, or do you believe
a SOUNDBLASTER qualifies as Multimedia-support?

The only problem is that Atari is too expensive and has only one model
no entry-level Falcon 029 w/o DSP (upgradable) and no high-end Falcon
040.

Wait, there is a Falcon 040 produced by a small firm in Germany
(I forgot the name) called Eagle. It is upgradable (Change of CPU-board)
has at least one VME-slot and supports lots of memory ST and TT RAM.
I've seen a review in last month ST-Computer/TOS.

BTW, what is Quicktime?

Hi all!
There have been some positive postings about OS/2 here on the net. It seems as if OS/2 is a logical successor of Ataris former philosophy: easy to use, powerful and a cheap and solid ground to work upon. At least these were my considerations when deciding to join the OS/2 world. Only Linux seems to be competitive. I just want to add the information that Darek Mihockas Gemulator works really great with OS/2 2.1 - so you can keep in touch with the Atari world and don't have to spend money for programs you already bought and are familiar and satisfied with.

Pete,
If I had the cash, I could buy a CD-Rom for the TT and a
driver from DMC Publishing that allows me complete compatability
with Kodak Photo-CD discs today.

The Falcon as I am sure you are aware can do direct to disk recording
and with the software development that is going on now is becoming
a machine that I'm looking at, you can see from a post a little while
back the types of software available :::

481. PI Prize - last call

Newsgroup: comp.sys.atari.st
Date: 1993-10-08 13:37:15 UTC
From: slyster@outb.wimsey.bc.ca
Message-ID: <slyster.0bh6@outb.wimsey.bc.ca>
Source record: 199710

Since the contest has 23 days to run, and since there have been many
e-mail requests for the info... this a the last posting!

THE STUART A. LYSTER PI CALCULATION FOUNDATION ANNOUNCES.....

A $50 (Canadian) cash award to the person who writes a program (using
ANY of the current algorithms - it is the prgrammers choice) that will
calculate PI the "fastest" (see #5 below). The winner will be
decided upon the following 7 grounds - the winner will be decided upon
by Stuart Lyster - his decision shall be final and unappealable (not
in quality, but in process!);

1) The program shall calculate the value of PI accurately using at
least TOS 1.4. In case of a tie, the program that is compatable
with later versions of TOS (including MultiTOS and GENEVA) will be
declared the winner.

2) The program will include the ability to write the value of PI to
the screen AND a disk (a hard disk is preferable, as someone might
eventually want to calculate beyond the 720K size of a floppy).
Writing the value to a printer is optional - but would be great
for parties.

3) The program will indicate by a screen display WHICH algorithm is
being used, and WHERE in the iteration process the program is
currently working.

4) The program shall write to screen/disk/printer (see #2) the
accurate digits of PI as they become established. (No fair simply
reading the value of PI from a file and writing them to the
screen. Cheaters who do this will have their computer infected
with the "Jimmy Bakker" virus - a virus which promises to feed
hungry children with your donations, only to have the money
channelled off to Heritage USA!)

5) The $50(Cdn) will be awarded as follows:
- $15(Cdn) to the programmer of the program which calculates
PI to 100 digits (accurately) the fastest.
- $15(Cdn) to the programmer of the program which calculates
PI to 1000 digits (accurately) the fastest.
- $20(Cdn) to the programmer of the program which calculates
PI to 10000 digits (accurately) the fastest.
Obviously, if a program does all three, then the total prize is
yours!
The program will be timed using my 520ST (1 meg) using TOS 1.4.
The decision of Stuart Lyster is final. You may appeal to a

higher celestial power if you think it will do any good.

6) Programs must be in the possession of Stuart Lyster by Oct 31st, 1993. Stuart Lyster assumes no responsibility for programs he does not receive, even though someone "swears to God it was sent two weeks ago!"
Programs can be sent by disk to:

THE STUART A. LYSTER PI CALCULATION FOUNDATION,
13800 Blackburn Avenue,
White Rock, BC V4B 2J6 (Tel (604)536-5389)

... or by UUCODE through Internet. Remember, Stuart is a complete idiot when trying to use UUCODE, so the Postal Service is probably your best bet.
Winners will be announced in November 1993, and the cheque(s) will be in the mail then.

7) It is understood by everyone submitting a program, that their program will exist in the Public Domain for free distribution. If you do not want you name associated with the program, please say so!

Why do this?

Why not. Besides, the calculation of PI is a way of testing the calculating integrity of a computer, which has to do millions of operations flawlessly to get it right. A PI Calculating program is a good bench test.

It is either that, or we ST owners will have to get a life. Me, I'd rather watch digits flash by my screen.

482. Formulas for PI

Newsgroup: comp.sys.atari.st
Date: 1993-10-08 13:38:20 UTC
From: slyster@outb.wimsey.bc.ca
Message-ID: <slyster.0bhc@outb.wimsey.bc.ca>
Source record: 199712

THANKS for agreeing to take a crack at writing a program that will calculate PI (to a user-inputted number of decimal digits to the right of the decimal place). This program is to run on the Atari ST/TT/ and/or Falcon030, with a minimum of TOS 1.4.

If you get this to work, my address is:

STUART LYSTER
13800 Blackburn Avenue,
White Rock, BC CANADA V4B 2Y8

I will reimburse postage!

My inquiry into a formula for calculating PI was piqued by the Scientific American article in 1988 by Borwein, about, "Ramanajun & PI." Borwein is one of two Canadian brothers (Math Dep't at Dalhousie University, Halifax, Nova Scotia) who together supplied the Quartically Convergent Algorithm that allowed David Bailey (of the Nasa AMES Research Centre) to calculate PI to 29,360,000 decimal places in January of 1986.

I have since been in touch with both David Bailey, and Tasahara Kanada by Internet E-Mail - both of whom were PI record holders in the 80s, until the Chudnovsky brothers and ther home built supercomputer came along.

It is one thing to come up with an algorithm that will converge quickly on PI. It is quite another to run that algorithm efficiently on a computer - even the Cray supercomputer Bailey used. There are a few arithmetic problems to solve in one's program, before actually running the thing.

Basically, the following is the 1984 algorithm by Borwein & Borwein:

Let a(0)=the square root of 2
Let b(0)=0
Let p(0)= 2 + the square root of 2

Then iterate the following formulae:

$$a(n+1) = \frac{(\text{square root } (a(n)) + (1 / \text{square root } (a(n)))}{2}$$

$$b(n+1) = \frac{\text{square root } (a(n)) * (1 + b(n))}{a(n) + b(n)}$$

```
p(n+1) = p(n) * b(n+1) * ( 1 + a(n+1))
-------------------------
1 + b(n+1)
```

p(n) converges quartically to PI, successive iterations of this algorithm yield 3, 8, 19, 41, 83, 170, 345, 694, 1392, 2788.... correct digits. This algorithm is NOT self-correcting, EACH of the ten iterations (to produce 2788 'correct' digits) must be performed with more than 2788 digits of precision.

More recently, Borwein & Borwein found another quartically converging (and better) algorithm. This finds 1 / PI:

```
a(0) = 6 - (4 * square root (2))
y(0) = (square root (2)) - 1

y(n+1) = 1 - (fourth root ( 1 - y^4))
-------------------------
1 + (fourth root ( 1 - y^4))

a(n+1) = a(n)*( 1 + y(n+1))^4 - 2^(2n+3) * y(n+1) * (1 + y(n+1) + y(n+1)^2)
```

A(n) converges to 1/PI.

To facilitate finding squares (and fourth roots!) and to find inverses, the programmer makes use of Newton's techniques to reduce both to simple multiplication:

```
x(n+1) = 2*x(n) - A*(x(n)^2) converges to the reciprocal of A

y(n+1) = 3*y(n) - A*(y(n)^3)
-----------------
2 converges to the reciprocal of the
square root of A
```

Bailey uses 'Multi-precision Multiplication' to keep track of the results of a large digit multiplication. put every digit into a cell of an array, and then....

```
z(0) = x(0)*y(0)
z(1) = x(1)*y(0) + x(0)*y(1)
z(2) = x(2)*y(0) + x(1)*y(1) + x(0)*y(2)

(....... alll the way to .............)

z(n-2) = x(n/2 - 1) * y(n/2 - 1)
z(n-1) = 0
```

Then you release the 'carries', so that if z(m)>9,

```
then z(m-1) = z(m-1) + INT(z(m)/10)
z(m) = z(m) - 10*INT(z(m)/10)
```

These are the best algorithms. They converge the fastest on to PI. But me, being the chicken that I am, tried (in ST Basic) to use Manchin's 'arctan' formula(s)

PI = 16 * (arctan(1/5)) - 4 * (arctan(1/239))

or a three step calculation....

PI = 24 * (arctan(1/8)) + 8 * (arctan(1/57)) + 4 * (arctan(1/239))

Since an arctan calculation can be reduced to the recursive formula:

arctan(x) = x - x^3 + x^5 - x^7
--- --- --- ....
3 5 7

It should be easy to compute Manchin's two-step or three step
formula.

From: slyster@outb.wimsey.bc.ca
Message-ID: <slyster.0bhi@outb.wimsey.bc.ca>
Source record: 199713

A late flash in the world of calculating PI....

The Chudnovsky brothers of Columbia University in NYC hold the current world record at 2.26 Billion decimal digits of PI, done on a home built supercomputer, in the younger Chudnovsky's apartment.

They use an algorithm (I don't as of yet have my hands on it) that allows PI to be calculated as a 'chain letter'. I could calculate the value to 500,000 places, then ship the result to someone else, and they could pick up from there.

Ie. you don't have to start from scratch, like in the other algorithms, to get more decimal digits.

Does anyone have access to this algorithm? Does anyone want to be part of a PI chain letter?

Believe me: No (Neither G.Acher nor me like beer !) And the name ... well we want to blow up the gfx resolution, not the falcon. And my own falcon was the first we experimented with. This happened back in January! (Yes, I got my falcon already last year, December 21st). And since then my falcon ran fine with 50 MHz pixelclock.

Of course the resolution itself has nothing to do with the videochips heat load. The only critical thing is the clock. And with 50MHz the chips inside don't get too hot. (You cannot boil water with them...!) Our maximum resolution is not given. If you (and your monitor) could bear five Hz screen refresh rate, you could get a resolution of several thousand pixels each axis ... (Of course I am joking, but theoretically it would be possible!!)

Bye, Michael

485. Connecting PC and Atari

Newsgroup: comp.sys.atari.st
Date: 1993-10-08 14:07:13 UTC
From: ATOJALU@SDAV01.SEINF.ABB.SE
Message-ID: <1993Oct8.140713.17226@palantir.p.tvt.se>
Source record: 199709
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello all,

does anyone know if there is some kind of program available to connect a PC and an Atari ST using the serial or better and faster the parallell port.
The problem i have is that i want to use my PC's tapestation to backup my Atari's harddisk.
I am also planning to use this for filetransfers in both directions. In this case it would be possible to use Z-modem or such a protocol but in the case that i want to transfer a large amount of files located in several subdirectories it requires a lot of work. So i think that the easiest way would be to mount the servers disks on the client.

It would be great if there was a program like the INTERLINK in MS-DOS 6.0, where you mount all disks available on the "server" to the client.

Does anyone know if there is such a kit available for downloadaing with FTP, or is someone planning to make something like this. If not i think its about time to do so.
I am also interested in what commersial products that's available.

Waiting for reply in this news-group or by e-mail,

//JL

Newsgroups: comp.sys.atari.st
Subject: FALCON BACKWARD SETTINGS
Summary:
Followup-To:
Distribution: w
Organization: Dept of Computing & Electrical Engineering, Heriot-Watt University, Scotland
Keywords:

I suppose most Falcon users who also like to play ST games will have a
copy of BACKWARD, the FALCON-ST compatability accessory. What I would like to
do is compile a list of ST software which will work on the FALCON if BACKWARD
is used. The main problem with BACKWARD is that it is a trial and error
process. So if you have used BACKWARD succesfully for an ST program, please
send the name of the program, it's type eg. arcade game, word processor etc,
and the settings you used with BACKWARD. I will then compile these and re-post
on the net. Please E-Mail me personally at kgrubb@cee.hw.ac.uk

Kevin.

Jeffrey> I would use UW every time if it was free of bugs! I use
Jeffrey> FLASH not connect, but I wouldn't if connect had UW!!!

Jeffrey> Jeff Healey

UW is the only program I really use on the atari.... (98% of the time, anyway) and UW is the only program that I know of (that I use?) that crashes consistently. Sometimes it's fast (ie: < 30 minutes) sometimes it can go for days... but it will crash eventurally. I'm running tos 1.4 with all the patches that I know.

It APPEARS to be some sort of "slow down" or something.. and I guess it is a garbage collection or memory allocation related problem. I noticed that I can sometimes "help it along" by going between windows quickly.

All this may be moot... in a month, though. :-)

490. MGR running under MacMiNT

Newsgroup: comp.sys.atari.st
Date: 1993-10-08 16:30:57 UTC
From: kuochun@cirrus.com
Message-ID: <1993Oct8.163057.24296@cirrus.com>
Source record: 199719

With the help of many people, I got the MacNiNT running on my mac.
The gcc is running well also. However, I tried to install MGR but fail.
First of all, I am not familar with mgr and I was told to modify the mint.cnf
file in order to launch mgr. Does any one have the experience to run MGR
under MacMiNT or MiNT? How should I do it right?

Thansk for your help.

>
> Ok, I'll bite - Will it work on your competitor's cards? Like...
>oh I don't know, maybe one of NOVA's cards? Perhaps a model like the
>NOVA16M?

I don't know..but if it is not Cyrell Specific..but for instance does
everything via legal GEMDOS / and/or VDI calls...then it should work just
fine...I guess that's what he meant by a special version for non-cyrel
user's...

>
> BTW, you guys don't happen to have any competitive upgrade
>specials, do you? <grin>

What's a competitive price upgrade? and what exactly do you mean? The NOVA
16M VME version is now available for these prices:

589 U$D + Shipping for non-lexicor user's
489 U$D + Shipping for Lexicor family members

For both VME and Megabus versions

The SuperNOVA 32bit Graphics System still cost's 999 U$D...

and NOVA too has their fair share of supporting software that comes along
with it....like ReSWITCH that allows automatic resolution switching of
color's AND physical screen withou rebooting...a virtual screen switcher,
th accessory, screen saver's, with the NOVA special Disk you get a few NOVA
specific games and a color calibration system for professional Color Print
in 24bit, a powerful Video Mode Generator that allows you to program any
resolution you like from as strange as 966x548 or 768x512, whatever you
like. The VMG allow's you to produce user-customed resolutions a cpx
controller etc. etc.

Here is something on it I got off a local BBS. I am not responsible for the content:

==========
FOR IMMEDIATE RELEASE
==========
SOFTWARE DEVELOPMENT SYSTEMS
...is proud to announce...
THE ATARI(tm) COMPENDIUM
==========

Software Development Systems will debut "The Atari(tm) Compendium" at the Southern California Atari Computer Faire v7.0, Saturday and Sunday, September 18th and 19th at the Glendale Civic Auditorium.

Both professional and amateur programmers will find the Compendium the single most valuable reference ever published for Atari computers. The Compendium contains 860 pages of documentation, tables, and diagrams galore. A table of contents follows:

TABLE OF CONTENTS
=================

Chapter 1: Introduction to Atari Programming
Chapter 2: GEMDOS
Chapter 3: BIOS
Chapter 4: XBIOS
Chapter 5: Hardware
Chapter 6: AES
Chapter 7: VDI
Chapter 8: Line-A
Chapter 9: Desktop
Chapter 10: XCONTROL
Chapter 11: GEM User Interface Guidelines
Appendix A: Functions by Opcode
Appendix B: Memory Map
Appendix C: Native File Formats
Appendix D: Error Codes
Appendix E: ASCII Table
Appendix F: IKBD Scan Codes
Appendix G: Speedo(tm) Fonts
Appendix H: The Drag & Drop Protocol

Contained in the appropriate chapters are complete function references
for each Atari system call in an easy-to-read format. The function
reference in the Compendium is up-to-date as of MultiTOS 1.08b and TOS 5.0.

Some highlights of topics covered are:

- The TOS file system
- Networking
- GEMDOS/MiNT processes
- MiNT interprocess communication
- The Cookie Jar
- BIOS/XBIOS/GEMDOS Vectors
- Falcon030 Video/Sound Control
- The DSP
- The IKBD Controller
- Utilizing math coprocessors
- Game controllers
- Resources (including new TOS 4.0 resources)
- Window iconification
- VDI Workstations
- True-Color device graphics
- SpeedoGDOS
- Desktop extensibility
- Extensive user interface guidelines
- The most complete memory map ever published
- A complete "graphic" catalog of Speedo characters
- File formats (.GEM, .IMG (including color), .FNT, .RSC)

Programmers using 'C', 'C++', 'Pascal', 'Assembler', or 'BASIC' will all
find useful information contained in the Compendium. Each function call is

listed with a binding (in 'C' or Assembler as appropriate). In addition, each function reference includes a 'Caveats' section which notes system bugs and which OS version they appear in (and a fix if possible).

The Compendium is professionally bound with a four-color cover in standard 7"x9" format.

The Compendium will be available at your local dealer shortly after its debut at the show and will also be available direct from SDS at the address listed below.

Product Name: The Atari Compendium
ISBN: 0-9638331-0-3

Suggested Retail Price: $49.95

When placing an order with SDS directly please send a check or money order for $49.95 and $4.00 shipping and handling. CA residents add 8.25% sales tax. We accept international orders with international money order only. International customers should add an additional $2.00 S & H.

We are sorry but we cannot accept credit cards.

Unless you want to modify it a lot, forget about running MGR under MacMiNT.
MacMiNT only has a console-based interface to MiNT, and MGR needs graphics. I
think the original port was very specific to the Atari video hardware, and
even the new VDIMGR won't work because it (obviously) needs VDI, and that is
definitely not implemented in MacMiNT.

495. ICD LINK for sale

Newsgroup: comp.sys.atari.st
Date: 1993-10-08 18:57:27 UTC
From: hutch@bellman.lanl.gov
Message-ID: <1993Oct8.185727.23076@newshost.lanl.gov>
Source record: 199736

I have a 'special edition' ICD LINK for sale. This is the ultra-cool compact SCSI host adapter for Atari ST's that just plugs into your ACSI (DMA) port and your SCSI drive cable plugs into it. No hassles with cards, power supply cords, or whatever. This one also has a clear plastic cover so if you look real close you might see all those bytes dancing around in there. :)

Anyway, all I have is the LINK hardware itself... no manual or software disk, although I'm told that any of ICD's PD drivers available by ftp or on GEnie will work just dandy with it. Anyone know otherwise then let me know, OK?
I bought this from a guy at Glendale who didn't need it and now I don't either.

I'm entertaining offers for this new, unused unit. I don't know what the 'special edition' usually sells for but the usual one goes for ~$99 at Toad.

>Not quite... There has to be _more_ software availabe today and the qu
>_much_ better then six years ago. The rest is true.

The Scandinavia situation can't get any worse (as you're sure to know
living in Sweden). Here in Norway I know of only ONE Atari dealer !!

The closing of Atari Scandinavia in Sweden and the divisions in Norway
and Denmark was a disaster for Atari. Now almost no one has or wants to
get an Atari, and only a few of us ST-maniacs are still holding out :-(

I feel like Atari doesn't care a #$%& about us Atari owners over here !

From: dackerma@magnus.acs.ohio-state.edu
Message-ID: <294gku$8ij@charm.magnus.acs.ohio-state.edu>
Source record: 199729

Someone recently stated that Softlogik had discontinued support of and were planning no new products for the Atari. Softlogik just assured me onthe phone that this was wrong and whoever stated this didn't know what they were talking about.

Just for information sake,

Dan Ackerman

ackerman.29@osu.edu

502. Help required in submitting software to the internet.

Newsgroup: comp.sys.atari.st
Date: 1993-10-08 20:17:32 UTC
From: ae-a@minster.york.ac.uk
Message-ID: <750111452.4763@minster.york.ac.uk>
Source record: 199825

I am thinking of submitting some programs to the Net.
Should I bother to send the programs to the moderator of
comp.binaries.atari.st or should I submit the programs directly to various
FTP sites, and anounce their existence on comp.sys.atari.st
I have not seen anything recently on c.b.a.st (I have only been following it
for a week). Should I submit my programs to just one FTP site or more, and
which one(s) do you recommend.
And how do I submit programs to FTP sites?

503. HELP WITH HERMES PLEASE!!!

> it separately...but who knows what dealers will do after if leaves

> -MikeB

I bought such a board (with 1MB SIMMS) about two months ago from Toad, about 1-1/2 years after I got my TT. And it came in an Atari box that had "TT-RAM expansion board" (or something of the like) printed on it with a picture. So it seems Atari doesn't mind selling separately. But I couldn't get it unpopulated--only 4 or 16M versions.

But back to the original question--how does one change the jumpers to make it 16M? I've been wondering this for a while.

509. ACF@UW Monthly Meeting - October

Newsgroup: comp.sys.atari.st
Date: 1993-10-08 21:27:35 UTC
From: bgilbert@cs.washington.edu
Message-ID: <1993Oct8.212735.978@beaver.cs.washington.edu>
Source record: 199738

The Atari Computer Fiends at the University of Washington (ACF@UW) will
hold our October meeting as follows :

Date : Sunday, October 24, 1993
Time : 6:00 PM - 8:00 PM (tentative, may go longer)
Place : Johnson Hall, Room 214
University of Washington campus
Seattle, Washington

The main event planned for this meeting will be a ComLynx hookup
so encourage anyone with a Lynx to attend! See the post in alt.games.lynx
for more details on that.

Besides the Lynx extravaganza we plan to show off some more Falcon demos
(notably the Space Junk demo), the Atari Compendium, and as always the
latest and greatest assortment of new products for your Atari computer
and more technical expertise and helpful advice than you can shake a
stick at! :-)

See you there!

> look into RIEMANN II?

Oh, yes. I'm an owner of this programm and of Maple 4.2 for Atari, but the best what I have is Maple 5 on the Spectre.
Riemann is a symbolic algebra program too, but on a quite lower level. For a useful work, it lacks too many functions. So you have to add these things. Therefore it has a good programming language included. It's a Lisp with a Pascal-like form.
It depends on what you need, if you don't need many functions and if you you are able to program what you're missing, then Riemann could be your program. Besides it's the only such a program which runs on a TT or has a GEM-desktop.
Maple 4.2 has many more functions, but it's out of date, and a newer version isn't in sight. Besides it cost's almost five times what Riemann cost's. For Macs and PCs there ist a student version of Maple 5.2 for almost half the price of Riemann, but not for the Ataris. For these other computers these student version of Maple 5.2 is the best for this price you can get.
Here in Germany it's possible to get Maple on universities for a few dollars if the univ. has a campus license for Maple and it's the normalversion, not the student version ! This way I get my versions :-)

> was text only...

Oh no, the version 5 is the actual version, which has so more functions
and a so better concept, that you can't really compare this both versions.
If you could look on the new version on a Mac and then old version on a
ST,
you would realize that the old version is outdated and oldfashioned.

In article <1993Oct8.190742.26112@beaver.cs.washington.edu> sdenman@lynx.cs.washington.edu (Stuart Denman) writes:

Robert A. Jung (rjung@netcom.com) wrote:
: Subject line says it all. I was just told that (as far as anyone can
: determine), CBS THIS MORNING will be running a segment on the Atari Jaguar
: on Friday, October 8, 1993. The crew from CBS went up to Sunnyvale a while
: ago and stayed for about six hours. How much of that will be on the air is
: anyone's business, but it should be interesting.

Can you let us know what they said? Some of us missed it. Thanks

I taped the segment.

It was pretty good. They had both the 3DO and the Jaguar on display
for a little while. The three Jaguar games the showed in action were
Raiden, Cresent Galaxy, and Cybermorph, with most of the time spent
looking at Cybermorph.

Raiden looked good for what litle I saw, I am a big fan of the arcade game.

Cresent Galaxy looked nice, but looked like a standard side-scroling
shooter, which may interest others but not me.

Cybermorph looked like something I would get - It had nice smooth
shaded colored hills, and fairly smooth graphics. The morphing effect
was kind of neat, but I would have liked to see a more complex ship
than they had (perhaps the final version will have a nicer looking
one). It looked a lot better than Skyfox to me.

The only thing that was sort of disappointing was they didn't show
Alien vs. Preditor, which I really wanted to see in action.

They also said that the limited rollout would be in November, and that
the price would be $250. This may be the price for just the initial
units, and then it will fall with the nationwide rollout - I am
unsure.

Hmm, probably...around here, the ST doesn't seem as popular...

Anyone ever know if they came out with something called Delux Mule?
I used to call a BBS and the sysop claimed that he was working on a
game for the ST called Mule Deluxe.

If you want to do C++ programming though, GNU C is your only choice.
When Comeu (sp) C++ is released, you'll have another choice, but I'm
pretty sure it's a front-end for Lattice C (like AT&T's cfront).

Actually, I'm responsible for serveral people around here converting
from ///Turbo Board to RATSoft. I think I got him at least five
sales... ;-)

Has he gotten rid of the GFA-BASIC parts yet? They were causing some
rather serious stability problems... :-(

525. CBS THIS MORNING Summary

Newsgroup: comp.sys.atari.st
Date: 1993-10-09 03:37:52 UTC
From: rjung@netcom.com
Message-ID: <rjungCEM234.Kyv@netcom.com>
Source record: 199745
Cross-posted to: rec.games.video.misc,alt.games.lynx,comp.sys.atari.st

A brief summary of the video-game-related portion of today's CBS THIS MORNING, for those who didn't see it. Note: I may have mentally rearranged a few bits, but I think I got all the high points. Corrections welcome.

Part I: 3DO
- Footage of "Crash and Burn" in action.
- Looks like photos in game magazines
- "32-bit system", beyond anything out today
- Sierra On-line
- Game development (nothing recognizable)
- President comments on unit
- Trip Hawkins
- Demos PGA GOLF
- "Looks like a TV broadcast, except you control it"
- Boy Scout troop plays C&B
- Enthusiastic comments
- "Better sound/graphics than Sega or Nintendo"

Part II: Atari Jaguar
- Unit shown
- Jaguar for $250
- CD-ROM Drive optional (shown attached)
- Games shown ("First time shown on TV")
- CRESENT GALAXY
- CYBERMORPH
- RAIDEN
- Looks like game magazine photos
- Sam Tramiel speaks
- Review by video-game editor of San Francisco Chronicle
- "For $200, it's very impressive."

That's about it, really. If you have been reading the video-game magazines and seen the game photos already, you are not missing much. The Jaguar games did not look as impressive next to the 3DO (the showing of ALIENS VS. PREDATOR would have helped a lot, IMO), but they do look better than the Genesis or SNES stuff out today. Both systems got equal air-time, and neither machine got any bias for or against it. The closest there was to a bias was when the segment ended with an exchange about the 3DO's price:

"How much does the 3DO cost again?"
"$700"
"Who's going to buy it at that price?"
"There are people who will pay for the advanced technology. And the price is expected to go down in the future."

All in all, nothing was revealed that regular reading of the magazines and rec.games.video.misc didn't reveal already.

I'll do that next time I've got Speedo active; does anyone know know
why the Fond Width tables slow things down so badly? Especially after
taking a while to pre-build them... quite a bad performance hit!

Yes, Atari was one of the first computer companies to TALK about having CD-ROM support. In 1986, a third-party company, ActiVenture, shared the tiny little room at Summer CES in Chicago where Atari introduced the ST to the world, and demostrated their CD-ROM drive for the ST. The company rep that was showing it off had the entire (?) Compton's Encyclopedia in his shirt pocket, and wowed the audience by having them suggest topics to look up...

I was in the front row, and suggested "Dinosaur", since my daughter had a fascination with dinosaurs at the time... he entered the search term, and up popped page after page of info about dinosaurs.. everyone in the room was very much impressed.

In the years that followed, Atari continued to TALK about their "state of the art", "cutting edge technology" CD-ROM project...

And they TALKED and TALKED about it...

Meanwhile, other companies started quietly producing their own CD-ROM products, while Atari continued to TALK about how someday, they were going to be the first in the industry to have a CD-ROM system.

At first they TALKED about how the system would be too expensive to market, and said that they wouldn't release it until the prices came down. And meanwhile, other companies were shipping CD-ROM drives, and CD-ROMs were coming out with all kinds of information on them for other computers.

Eventually, they said that there were so many CD-ROM products on the market that they couldn't successfully sell a CD-ROM system under the Atari name, and everyone should go out and buy a drive, and figure out for themselves how to hook it up to an Atari computer, and make it work.

And meanwhile, you can buy a CD-ROM drive for PC systems for less than $200, including cables and interface, and software drivers to make it work, while there is NO available CD-ROM system for any Atari computer in a "plug and play" configuration.

(Yes.. there WERE a few "CDAR-504" CD-ROM players floating around.. a store near me even had ONE.. but it was never released as a full-line Atari product.)

And yes, the SoundBlaster board has a Digital Signal Processor on it, pre-dating the Falcon by a number of years.

BobR

(Sorry if anyone doesn't like hearing any of this, but that's the way it is. Don't flame me for remembering it, flame Atari for killing the dream.)

As far as I know the 486 has built-in FPU. A Falcon with an FPU would take
much less than 50 minutes to do the job. You could mail me the compiled
version of your test and I'll run it on my Falcon+FPU and post the result.
My own tests show that on a variety of float calculations the FPU is 15
times faster the the 030, but some functions are 100 times faster. My
guess is that the Falcon would take less than 3 minutes to do this.

Interesting post, RJ, but you managed to hit on just about everything except the question I asked..

Tell me, why is my asking if you have proof of "slander", "wondering why you continue to leap at every opportunity to put down Atari Corp"..?

How is that related..?

Did I ask you to post everything you know about Atari Corp. and the Jaguar?

Where in the world did that come from..? Please read my message again if you need to. I said NOTHING about the Jaguar in my message to you.

Let me try one more time...

Do you have proof of "slander" (actually libel) that Atari Corp does not?

What I said was that Atari has never used their lawyers and millions of dollars to crush STReport. If there really WAS any "slander", don't you think they would have done so long ago..?

I'm just interested to know why you're so sure STReport's editor never misses an opportunity to "slander" Atari Corp., when they themselves don't seem to think so.

You might not trust STReport's accuracy, and I might not trust MAD Magazines' accuracy, but that's far different from voicing charges of slander.

BobR

(By the way, before anyone starts, I'm not associated in any way with STReport or Ralph Mariano. I just take exception to the idea that anyone who criticizes Atari must be a slandering, libelous low-life.)

> - "For $200, it's very impressive."

Here is the whole text of this person's comments:

Glenn Rubenstein, video game reviewer, San Francisco Examiner:

"For $250, I am very impressed with the Jaguar. Y'know, I
would actually spend my own money, not a lot of journalists
would say that about a product, but I would actually go out
and buy a Jaguar."

CP> soldering. Is it possible with the 68882 too? Are these chips
CP> pin-compatible?

The '881 and '882 are pin compatible, and the '882 is about 50% faster. The primary difference in the two has to do with the speed and the '882 uses a different stack frame if I recall correctly. I DO know that the '882 will work in the Falcon, 'cause I've got one in mine.

Let's not forget that Ralph Mariano left himself an "out". He never said explicitly that the Jaguar was delayed. Instead, he said "I heard a _rumor_ that the Jaguar was delayed". In other words, he gets to inflame people, yet is free from accountability.

Any way you slice it, Ralph is using ST Report as a soapbox to put down any negative Atari news he hears (or makes up). Unless he's willing to cite sources and names, I still wouldn't trust him any further than I can heft a Buick. Given the previous track record of ST Report, Bob, I'm surprised you find his position worth defending...

(And don't go splitting semantics on me about the meaning of the word "slander". I'm not an English major. You know and I know exactly what my original message meant, that Ralph's out slapping his tar brush indiscriminately...)

> drive. It then boots OK including accessories but not programs in the
> auto folder. I tried 5 16Mb partitions but there was no diference. If I
> put the 20 Mb drive back everything works fine. Can anybody tell me ...

You don't say what you boot with on the 20M. The symptoms described fit with the driver being configured to boot from another logical drive than C: This would have the system looking for AUTO elsewhere, not finding it, and then defaulting to only load ACC on your normal C: (or A if you had booted from disk). This was never an issue with early AHDI versions, but most alternative drivers gave the option of having alternative boot drives - some like ICDBOOT allow you to select boot drive by holding the relevant key (C or D or E or...) at boot time. An advantage if you run GEM / MiNT / GCR / PC-em and multiple harddisks.
BTW: An upgrade to at least TOS 1.4 is recommended to avoid accumulative structural faults in the filesystem. Helps speed too.

Should have been possible to "map it out", but you may not originally have
formatted the disk with ICD format. If not, then yes, reformat.

> My question is, is there anyway to format just that partition, and not
> the whole hd? I tried rebuilding it with the various ICD utilities, but
> nothing seems to work...
Some utilities allow PC-like format single partition. Eg by Claus Brod. Again,
since you have ICD utilities, then reformat. You may want to readjust
partitioning while you're at it, somehow there's always one which gets a bit
tight with time...

> Just an interesting note, the bad sectors are in a small section of the
> drive all arranged in a periodic pattern...is this a sign that there is
> a physical problem (such as a scratch...) on my drive?
Seems likely.

> If it helps, I have a MiniScribe 3650 with Adaptec 4000/4070/5???
> controller, and the ICD AdSCSI host adaptor. It is running as a 64 Mb
> with four 16Kb partitions (C, D, E, F...pretty generic).
16 _M_byte I would hope :-)
It's usually a good idea to run a smaller C: with misc boot and system, unless
you have a good reason for avoiding BGM. (TOS 1.4 or higher allows 32M before
going over to BGM format.) Why not 6 / 10 / 16 / 32 ?

> on the Falcon?

Sorry, haven't heard of it...

> 2. Is there a problem with using DD floppies in the HD drive and can
> these floppies be read in a DD drive (i.e. I will still have an
> ST in use and want to be able to swap disks between the two)?

Nope, you'll have no problems reading DD disks on the Falcon, neither will you have a problem reading the same disk on your ST afterwards. Of course you can't read HD disks on your ST though, unless you buy an HD-diskdrive...

> 3. Can I get medium and low res on the mono monitor now? I know you
> can get high res (interlaced...ugly) on the color monitor.

I don't think so, it shouldn't be possible. You really should buy a VGA/SVGA or multisync monitor instead, that way you'll get flickerfree high-resolution graphics with colours.

> 4. Can the D2D software be run under MTOS together with a MIDI
> sequencer or is this expecting too much?

Depends on the MIDI sequencer... If the sequencer can run under MultiTOS I guess you can run them both at the same time, they won't interact however, if the sequencer isn't made for it. Of course you can get things like Cubase Audio, Notator Logic (I think) and Dame if you want MIDI and D2D...

> 5. I have only heard the D2D output over cheap speakers, is it
> really squeaky clean (i.e. no hums, buzzes, etc.)?

Depends on the source :-) I'm no expert so I really can't say...

> 6. Does the VKiller virus protection software run OK on the Falcon?

No idea...

<>quite difficult without an mmu. And a auto resizing stack. And...

<And the complete impossibility of implementing the brk() system call...

Not complete impossible -- see the atari port of minix, which does include
the brk() call...

In the minix implementation the space allocated by the (s)brk() call competes
with the space used by the stack. The size for the combination of these two
must be set at link time (It is noted in the program header.)
Not a very efficient implementation, but at least you have source code
compatibility with UNIX.

I think that if you really are interested in fancy stuff you should not
program in assembly. Assembly is OK for short programs / routines needing
maximum speed or minimum size. But for the rest you should use a high level
programming language!

The TTM194/195 is a Philips M47EAA7WJL (with ISL) monitor with the
'Balanced ECL 1 Bit @ 120 L-L' type. (a 'standard' like VGA) So it's NOT
the same as VGA! So you can't hook up a VGA NEC, it will have to be an ECL
monitor. Graphics cards use the VGA standard, though...

> in a "plug and play" configuration.

Hmmmm....that depends on your definition of plug and play. With my AdSCSI plus and ICD's Meta DOS I can hook up a SCSI CD-ROM to my old ST. That sounds like "plug and play" to me.

If you want to include specific software into "plug and play" that MIGHT change things. I'm not aware of EXACTLY what software is available. I do know that there is CD-ROM software for the Falcon. If it is backwardly compatible then there is also software available.

Hi!

I am running a spectre GCR (Mac-)emulation on my atari mega/ste.
The HD floppy disk drive, I have, works well both with DD and HD disks.
However, on the Mac side there are major problems: I know well that the
emulation cannot handle HD disks; but DD disks cause all kinds of error
messages as well.
Does anybody know the reason for these problems or, even better,
how to avoid them?

Thanks, Matthias.

Well, not to belabor the point, but I would define "plug and play" as
plug in a CD-ROM drive and play a CD-ROM.

True, you can connect *any* SCSI device to an ST with an AdSCSI interface,
or directly to the SCSI port on a Falcon.

But that doesn't mean you'll be able to "play".

When Atari threw up its hands and buried its CD-ROM, it released Meta-DOS
which contains the extensions needed to access SCSI devices like CD-ROM
drives. But it's FAR from "plug and play".

At the same time, the $199 PC CD-ROM drive I mentioned comes with a disk
which contains drivers that will let you be reading your first CD-ROM
almost as soon as you can close the cover on the computer and tear the
shrink-wrap off the CD.
As far as I know, no one offers a similar CD-ROM drive product for the
Atari line of computers. You want one, you figure it out yourself.

BobR

Yes, I know what you meant when you said "slander" instead of libel, it's a common mistake, and I sometimes have to look it up myself.. that's not at all what my question was however...

You're doing a fine song and dance around the question, RJ... but you still haven't answered it.
\
You said the editor of STReport (and I don't care if it HAD been MAD Magazine instead.. that's not the point) never misses an opportunity to "slander" Atari Corp.

That must mean that you have definite knowledge that STReport is knowingly and maliciously lying with intent to cause undue harm to the entity being slandered.

My point is that even as badly as Bob Brodie hates Ralph Mariano, and even as badly as Atari Corp in general hates STReport, they have never used all the lawyers they've sued Nintendo with, over and over, to try to crush STReport.

That indicates to me that THEY must know that it's NOT "slander", and that it's well enough based in truth that they can't win a lawsuit.

If Atari Corp and their lawyers are satisfied that it's not slander, I'm just wondering what it is that you know to make you want to make public accusations like that.

"I don't trust Ralph Mariano further than I can throw him" is no problem, but accusations of slander are different.

You may not agree with what he says, and you may not like what he says, but that doesn't necessarially make it untrue.

For the record, I don't agree with everything in STReport, and I don't particularly even like Ralph's "style". But that doesn't automatically make him a liar.

(I won't get into STReport's "record", as you seem to be having trouble focusing on this one issue, but you seem to be wrong there too.)

BobR

558. Re: Jaguar delayed?

Nope, Mark.. I have nothing to do with STReport. They're perfectly capable of keeping Atari Corp busy looking over their shoulders by themselves.

If I *did* write for them, there would be none of the STR-style "I know something you don't know, but I'm not going to tell you" kind of stuff.

One of the things I *don't* like about STReport is the way Ralph never gets around to naming names and detailing events.

He says just enough to make the "guilty parties" nervous, but not enough for my friend Stash to know what the hell he's talking about. Anyone who isn't well enough connected to know what the editorials are talking about will probably be completely in the dark. Stash prints STReport and Z*Net, and has to ask me what it's all about.

If you've read STReport, you know that most of the editorials don't make a lot of sense... AND YET ... they're enough to get Atari and their friends all bent out of shape. There must be SOMETHING that "they know" that "they know Ralph knows" for them to get their underwear all twisted up like they do when they read it.

That wouldn't be my style at all.

BobR

> I'd take this "news" with a MASSIVE grain of salt.

Unfortunately, however much ST Report resembles the gossip rags in
style, their track record on accuracy is considerable. The IAAD has been
trying to plug the 'leak' for 2 1/2 years, and still hasn't managed it.
Plus, there are obviously enough dissatisfied employees at Atari to keep
Ralph well supplied with inside news.
Much as I dislike a lot of ST Report, I've found in the 5 years I've
been reading it, that his reporting eventually turns out to be generally
accurate, if sensationalist.
Why would Atari dislike him so much if he was wrong all the time?

>I am interested to know what is involved in converting a mono SVGA
>monitor
>to work with the ST. Does anyone out there know?

Modifications to an SVGA monitor: Virtually nothing.

The ST's signal is 35,7 kHz horizontal scan rate.
An SVGA monitor must be capable of 31,5 (VGA), 35,2 (800x600 56 Hz) and
35,5 (1024x768 87 Hz interlaced) and might do 38 kHz (800x600 60 Hz).

35,5 is so close to 35,7 that most monitors will "catch" the ST's signal
without modification.
You might get odd picture position or size, so you'd like to adjust that.

And, you must solder an adaptor from the standard 15 pin VGA connector to
the ST's 13 pin DIN connector.

Finally, SVGA monitors do not have speakers.

bye, Peter

565. SilkMouse and Before Dawn

Newsgroup: comp.sys.atari.st
Date: 1993-10-09 19:09:00 UTC
From: Arne_Rudolph@ac.maus.de
Message-ID: <A25908@AC.maus.de>
Source record: 199760

For all those of you, who tried getting SilkMouse _and_ 'Before Dawn' to work
together (and failed): try setting the popup 'Change vectors' to 'at boot'.
From now on 'Before Dawn' grabs the system-vectors only once (when booting the ACC), which is what SilkMouse likes best.

If you want to know the details: it looks, as if SilkMouse does not use the
XBRA-protocol for intercepting system-vectors. This way 'Before Dawn' can not
find out, wheter it is still linked into the mouse-vector, or whether it has
been kicked out. Usually not finding its ID in the XBRA-chain means 'kicked
out', so 'Before Dawn' reinstalls its mouse-routine. This ends up in an endless loop, because this routine points to SilkMouse, which calls the routine of 'Before Dawn', which ... (I think you get the picture)

If anybody knows Mark Slagell, please tell him, that he should use the XBRA-
protocol (even ATARI's MACCEL does this ;-)

Ciao,
Arne

I need the name of an ftp mail-server. BART only handles a.a.u.e and I'd like to know the name of one that can access any ftp site (I used to know the name of one). The command to get English documentation would be most helpful too so I figur eout how to use it!!

Also, when doing a real FTP, does the system check your password (your email address for anonymous FTP) for validity?

I'm on a public access Unix station where I get my mail and such, and my address, but I found that I have FTP ability on my schools mainframe (which I'm not supposed to find let alone use, I was told it wasn't possible), but I always have trouble getting on and lose teh connection right after typing anonymous and my Email address.

Please repond to E-Mail since I rarely ahve time to read this conference.

Thanks
Evan Langlois

Source record: 199834

For the widest possible distribution, it would probably be best to submit software to BOTH the comp.sys.atari.binaries newsgroup, and to send it to well-known archive sites like atari.archive.umich.edu

People who don't have FTP access can get it from the binaries newsgroup, and having it on the archives will insure that it's available in the future, in case anyone doesn't get it now.

Actually, to save on "trans-atlantic" bandwidth, it would be good to submit it to archive sites in the US and in Europe and the UK. That way people can get it from a closer site, and take some of the load off of the umich site. (Unfortunately I don't have the Internet addresses for some of the German and UK sites with me... I know someone will be able to fill in the blanks though...)

Files submitted to the binaries newsgroup should be UUencoded and mailed to the administrator of the group..

FTP uploading is the opposite of FTP downloading.. change to the INCOMING directory of the archive site and use the FTP PUT FILENAME.EXT command.

If the mail address of the archive administrator is given, you can also drop them a message describing the new upload to help them know where to move it.

So where are your numbers to support this? And how would it do
if the the DSP chip were used? After all, every Falcon will have
one, so why not use it? Stop speculating; complete the work
before spouting off; so far, we know a '486 beats an ST.

Pretty thin argument, really, without the Falcon numbers with and
without the DSP chip; and doesn't this belong in advocacy, BTW?

How will you use these apps. Don't they require you to be connected to an
ethernet? Can you use serial lines? Is there a slip and IP stack that works
on an ST??

Already registered, Mike :-) It's an interesting idea, but I don't know if it is really necessary anymore - since programs like SCREEN basically give you the same thing (not in separate windows, but through "toggled" windows like the DOS version of UW). Besides, SCREEN seems a lot easier to compile on more systems than the UW server. This is only my opinion, of course :-)

That's only one interpretation, and there was a lot of cash
money at stake in the Nintendo suit. What does Atari have to
gain from suing Ralph? Perhaps the lawyers realize bringing
a case would only provide free publicity to a point of view
they'd rather just ignore. They may believe STReport is
libelous, but may not see any value in pursuing it. All we
know is that there has not been a lawsuit, nothing more.

Unless CBS is lying, it's not clear there's any delay; and
doesn't this belong somewhere in the rec.games.video hierarchy?

577. Re: HD floppy disk under spectre GCR?

Newsgroup: comp.sys.atari.st
Date: 1993-10-09 23:35:55 UTC
From: L676791@LMSC5.IS.LMSC.LOCKHEED.COM
Message-ID: <93282.59755.L676791@LMSC5.IS.LMSC.LOCKHEED.COM>
Source record: 199751

Sorry to inform you, but Spectre GCR does not work with a 1.44 meg high density drive. You will need to hook up an external, double density 750K disk drive as drive "B" in order to get Spectre to work on your machine. There may be some out there who claim that Spectre GCR will work with a HD drive, but this is a common problem that many, many people have.
------------------------ Original Article ------------------------

I am running a spectre GCR (Mac-)emulation on my atari mega/ste.
The HD floppy disk drive, I have, works well both with DD and HD disks.
However, on the Mac side there are major problems: I know well that the emulation cannot handle HD disks; but DD disks cause all kinds of error messages as well.
Does anybody know the reason for these problems or, even better, how to avoid them?

I compiled pov-ray 2.0 and ran it on my TT (using gcc version 2.4.2)
The results (both with and without the FPU compiler option) were:

Atari TT, 20M RAM, MultiTOS, without FPU - 20 minutes 10 seconds
" , " , " , with FPU - 0 mintues 49 seconds

(using the basicvue.pov file with the same options as
above)

Just thought somebody might be interested.

> same time.

Well, firstly: The DSP doesn't produce the sound. Secondly: The falcon does have 16bit 8(I think) channel 50kHz sound chip built in. The DSP can be used to manipulate the sound in a lot of ways, but it can also be used for anything else really, it's simply a very fast processor! The Falcon comes with 16bit 50kHz D/A and A/D converters which means you do have a "better than CD-quality sampler" built in, and they're great! Programs for Direct-To-Disk sampling and sample-manipulation is available, both as PD/SW (i.e. WinRec/WinCut, Mjuzakk-tracker, Dame SW-version, Falcon D2D) and commercial packages (i.e. Cubase Audio, Notator logic, 4T/FX, D2D Edit, DigiTape pro, Dame commercial version......and so on)! There's LOTS of it, have a look in a.archive! ALL of these take advantage of the DSP for music-effects!

YES, it does have MIDI-ports, just like the ST/STE... The last thing mentioned shouldn't be difficult...haven't tried it though...

Probably .. a VGA can't do lower than 480 scanlines, when the Falcon uses lower resolution it sends "double lines" .. well .. this takes the same bandwidth as if they had used the full resolution ..

What I want to say with this is that routines that use ALL available processortime most often will have to use a low resoltion .. the VGA can't cope with that -> TV/RGB is the solution ..

B> in a "plug and play" configuration.

Bullshit.

Buy a CD-ROM.

No special hardware needed.

Hook it up to the SCSI-II port on the back of the Falcon.

Use it.

Stop lying.

As I believe I said before, if STReport is actually reporting the truth, why were they BANNED from GEnie recently? that seems to indicate that they were not playing a fair journalistic game. Besides, how could Atari sue over Ralph saying that he heard a rumor? Are they supposed to prove that he didn't hear a rumor? That it was himself that he heard the rumor from? By the wording of the article, it would seem that Ralph is choosing his words very carefully in order to protect himself from being sued, since he knows that nothing he is saying has any factual basis to it. I'm sure Atari would love for him to make one fatal slip of the tongue so that they can quiet him permanently (not in temrs of censorship of contrary views, but rather an attempt to protect a certain sense of journalistic integrity which Ralph seems to lack) Also, in the last conference, Bob Brodie said that there was no truth to the rumor of the Jag delays.

Hi all,
A relative of mine wishes me to piece together another ST and a half for
him, so if any of you out there still have hardward for sale let me know (also
interested in decent software).

I'm especially interested in the Mega-4 system I saw posted a bit back...

Please mail me lists of what you still have for sale and I'll get back to you
ASAP if I want anything,

Thanks!

BTW, I have several sets of ROMS for the Spectre GCR/128 for sale, these are
used ROMS, but I have tested them in my GCR and they work fine. I'm looking for
$99 each set ($30 cheaper than TOAD). The numbers match those recomended by
Dave Small. Anyone interested?

*** LISTING UPDATED ON 10/09/93 - ITEMS THAT WERE SOLD HAVE BEEN ***
*** REMOVED AND MANY NEW ITEMS HAVE BEEN ADDED!! ***

I have the following items sitting on my shelf gathering dust so I
decided to put them up for sale:

Quantity Item Price
2 Atari SC1224 Color monitor (old ones with GREAT picture) $150
each
1 Atari SC1224 Color monitor (new style) $125
1 Magnavox video monitor $ 50
1 Word Writer ST - original disks and manual $ 17
1 DataManager ST - original disks and manual $ 17
combo deal-WordWriter/DataManager $ 30
1 Shadow background file transfer prog - orig. disk/man $ 5
1 Flash 1.6 - original disk/manual $ 9
1 NeoDesk version 2 - original disk/manual $ 15
1 Copy II ST (Central Point Software)- original disk/manual$ 5

1 Atari 5200 Game COMPLETE SYSTEM
system includes:
1 Atari 5200 with original box
1 Atari Tracball in original box
2 Atari 5200 joysticks in original boxes
1 Wico Command Control Joystick (excellent self-centering) orig. box
1 Competition Pro 5000 Joystick (best stick ever for 5200) orig. box
1 2600 Cartridge Adaptor in original box
1 Pole Position cartridge with original box
1 Galaxian cartridge with original box
1 Dig Dug cartridge with original box
1 Missile Command cartridge with original box
1 Pengo cartridge with original box
1 Joust cartridge with original box
1 Popeye cartridge with original box
1 Star Trek cartridge with original box
1 Q*Bert cartridge with original box
1 Gyruss cartridge with original box
1 Space Invaders cartridge with original box
1 Pacman cartridge with original box
1 Ms. Pacman cartridge with original box
1 Mario Bros. cartridge with original box
1 Wizard Of Wor cartridge with original box
1 Frogger cartridge with original box
1 Defender cartridge with original box
1 Berzerk cartridge with original box

1 Countermeasure cartridge
1 Robotron 2084 cartridge
1 Super Breakout cartridge
1 Centipede cartridge
Entire set (5200/22 games/4 joysticks/trackball/2600 adaptor) $100

1 Atari 7800 Game System
system includes:
1 Atari 7800 with original box - NO JOYSTICKS
1 Karateka cartridge
1 Dig Dug cartridge
1 Galaga cartridge
1 Food Fight cartridge
1 Centipede cartridge
1 Joust cartridge
1 Robotron 2084 cartridge
1 Xevious cartridge
1 Pole Position II cartridge
1 Ms. Pacman cartridge
1 Asteroids cartridge
Entire set (7800/11 games) $ 50

Prices do not include shipping and are negotiable (especially if you want to make an offer on multiple items ;-)

I'm looking for PGP 2.3A for the ST. I've gotten the diffs from Clausthal, but the docs remind me of the old recipe for rabbit stew, "First, steal a rabbit...". Simply, where does one get the sources to apply the diffs to?

The doc with the diffs mention GCC. I built the sun4gcc target on SunOS 4.1.3 with zero errors and it works fine, but I prefer the security of my own ST. Cutting to the chase, what're the issues related to using gcc on an ST?

Is there an ftp site that has an ST PGP package like the DOS package at soda.berkeley.edu?

Thanks.

SW> help will be appreciated.

If I remember correctly, those two games change the sync rate to 50 hz. All you need to do is tweak your vertical hold control on the monitor until it JUST BARELY locks in on the signal for the game; you should then be able to use either 50 or 60 hz without problems.

KH> So, what could be wrong? All of this stuff worked just s little
KH> while ago...

Ummm........this is just a stab in the dark, but it is the only thing I can think of......

Over on the right side of the machine by the cutout for the mouse/joystick ports, there are a couple of small (14 pin I think) socketed chips. These are GAL chips, and I think they control the Host Interface to the DSP. You might try CAREFULLY prying these chips loose and then reseating them. While you are at it, take your thumb and press down FIRMLY on anything that is in a socket. Don't be afraid of pressing down; as long as the motherboard is flat on a solid surface you aren't gonna break anything.

Hope this helps.

CH> Type-1 fonts available, and Adobe seems quite happy to lisence their
CH> stuff to anyone?

I believe that the primary reason was that Speedo was quite a bit faster than the Adobe type fonts, and possibly because Speedo is vector based. Aren't Adobe fonts bitmapped?

Anyway, these are only guesses/hazy memories, so it is quite possible that I am wrong.

> living in Sweden). Here in Norway I know of only ONE Atari dealer !!

That bad huh? There are maybe half a dozen left in Sweden but I do most of my shopping mailorder from England and Germany, it's both faster and cheaper. I don't think it will change, even if the Falcon manage to sell well. Lets face it, we own a minority machine and since most people in the business has the letters PC stamped in their forehead, we'll just have to make the best we can of the situation.

> The closing of Atari Scandinavia in Sweden and the divisions in
> Norway and Denmark was a disaster for Atari. Now almost no one has or
> wants to get an Atari, and only a few of us ST-maniacs are still
> holding out :-(

I think a lot of people would actually like to buy a Falcon, trouble is it's too expensive to be a straight replacement for the now defunct STE and too "toyish" for those used to TT's and tower PC's. It's also because few people have ever heard of the Falcon since AdAstra doesn't do any advertising to support it in Sweden. In that respect they are even worse than Atari Scandinavia was, at least they tried.

> I feel like Atari doesn't care a #$%& about us Atari owners over here !

I don't care much for Atari Corp either. but I sure do like my Falcon !!!

Hi,

yesterday I spoke to the developer of a really great new program for
the F030. It is called Dame and the specifications really looks great.
This is one of the reason why I am starting to get my confidence in
F030 back.

- It is a D2D recording program

- Up to 92 channels simultaneous mix down to two channels with
crossfade, fade in/out, volume settings etc

- Any mix is always reversible

- Uses its own file system so the recording/playback quality is GREAT
Never any fragmentation problems!

- English (and Dutch) manual available

- Midi time sync; connect any midi-sync equipment
e.g. hook up your old ST with CuBase and get a great studio or
get a midi sync to your homestudio and you have a huge multitracker!

- Unlimited playlist, only your HD's are the limit

- The guy has been programming DSP since three years ago!
No shitty motorola DSP preset that most of the other competitors
seems to use.

- A great parametric EQ so you can boost or cut exactly the freq. you like
(not only the one that some programmer has chosen). Real-Time of course.

- Two channels simultaneous playback for maximum sound quality
(using more than two channels on the F030 will cause less quality)

- Available in a Monochrome version for those of you still using SM124/144

- It is NOT version 1.0 but 4.x so it has been tested for several years.
(previously sold to ST owners)

- Used by several studios and radio stations in Europe

- Price! only 200$ consumer price (maybe even cheaper from some...).
--------------------------------------------------------------------------
```

More GREAT news:

- Finally a digital input/output interface with coaxial connectors :-))))
It is finished and released since a couple of years ago and
modified for F030 (several months ago). All the other digital input/outp
that I have read about are very expensive, uses only optical connectors
and none of them are actually released. This is!
(life can not get any better)

- DSP Sample rate transformation; e.g. making it possible to send out
digital data in 44.1 KHz to your DAT for CD mastering, saving you
LOTS of money.

- Backup and archive functions to your DAT recorder, digital of course!

- Remove the most irritating copy protection a DAT recorder puts on a
digital recording. Your own choice ON or OFF!

- Used by several studios and radio stations in Europe

- As today the digital interface only work together with Dame so it is
not really a separate product but you do not have to purchase it at
the same time and their is no package price for buying both.

- A limited version is available as shareware. Register and get an English
manual (I have started out that way :-)).

- etc etc etc

- Price! only 300$ consumer price (maybe even cheaper from some...).

- Price; Dame + the digital interface: US$ 500:-.

This is really a professional program!!
==========

If you want more information on Dame please contact me here or on:

Ph. +46-31-81 98 50
Fax +46-31-81 21 39
InterNet peter@vinga.trillium.se

Best Regards,
Peter Segerdahl

PS. I am from now on also distributing the products in Sweden.

In a message of <02 Oct 93 00:18:52>, Bob_BobR_Retelle (1:286/2) writes:

BB> If you don't accept that fact as "evidence" that Atari has destroyed
BB> its dealer network (my original statement in answer to the original

Atari's dealer network was destroyed primarily by selling machines to mail order companies who were then able to turn around and sell the machines to end users for less than what dealers paid for them. Now Atari is trying to recitify this situation by telling dealers that they can't sell mail order, and people are harping about that.

You comment that Atari is nowhere near what it was 6 years ago. True, but in 6 years a lot of things change. 6 years ago Atari was at its best in recent history. Things went downhill, partly because of the reason mentioned above, and partly for other reasons. While your statement that support now isn't what it was 6 years ago is accurate, it fails to recognize that there is NEW support developing for the Falcon out there RIGHT NOW. I can tell you for a fact that after investing close to 20 grand in developing the RAM Gizmo and some other products I am working on, that I intend to be around for a while. I know there are others out there as well.

The only conclusion that I can come to is that NOTHING is gonna make some people happy, so Atari needs to just concentrate on making money; with the release of the Jaguar I think they are doing just that.

Umm.. who's lying, eh Rickard..?

Right...

Buy a CD-ROM.

No special hardware needed (IF you have a Falcon.. I believe *I SAID THAT*).

Hook it up to the SCSI-II port on the back of the Falcon (I believe *I SAID THAT TOO*)

Use it... for what..? A paperweight..?

Are you saying the Falcon TOS has the MetaDOS drivers for CD-ROM drives built in..?

If so, then ok you can use it.. if not, as I said, it's a paperweight.

And, suppose you *DON'T HAVE A FALCON*..? (My original message said nothing about having to own one of the few Falcons in the world to use a CD-ROM)

(An aside to the "you can catch more flies with honey than with vinegar" proponents who don't like my "style" of messages..

Let me introduce you to the "style" of Rickard Troedsson:

>Bullshit
...
>Stop lying

Lotsa honey there, eh..? But then, he's on Atari's side..)

I use sarcasm, Rickard uses vulgarity...

You still can't "plug and play" a CD-ROM on an ST.

BobR

599. Re: TT Availability?

Er, Billy... most of the PC clone "plug and play" CD-ROMs use an ISA bus adapter card that has nothing to do with a sound board..

(The $199 ones I've been talking about, that is...)

The soundboard CD-ROM drives are usually SCSI drives, which are a bit more expensive.

And... it depends on your definition of "proprietary"..

If you mean that you can only use a SoundBlaster Pro board on one of the 40 million or so PC clones in the world, then yes, I guess it is "proprietary"...

BobR

What would Atari get out of shutting up STReport..?

Do you know Bob Brodie..? (I do...)

Do you know Ralph Mariano..? (I do...)

If Bob Brodie thought there was ANY way to "get" Ralph Mariano, I'm sure
he would consider it money well spent.

If Atari could shut STReport down, they would... if only for the satisfaction
of silencing the critical voice that has not let them get away with anything
for the last 6 or 7 years.

They wouldn't get much if any money out of it, but they WOULD get a Friday
night without an STReport.

All *YOU* know is there hasn't been a lawsuit... what *I* know is that if
Atari *could* "get Ralph", they would...

(My opinion, based on 6 or 7 years of observing...)

There is a great deal more to the situation regarding "STReport BANNED from GEnie" (sounds like one of those great Inquirer style headlines, eh..?) than "playing a fair journalistic game"...

(Someday it would be fun to actually write a book about the "Sex, Lies, and Video Tapes" that go on "behind the scenes"...)

STReport is NOT "banned" on CompuServe...
STReport is NOT "banned" on Delphi...
STReport is NOT "banned" on countless private BBSs...

Seems there is only ONE "problem area"... the ONE where Atari holds a *CONTRACT* to the "Information Service"...

It *couldn't* be a case of violations of "Right Think" and "AtariSpeak", could it..?

I dunno... must be just a coincidence...

BobR

603. PRISM PAINT II Demo

MetaDOS is far from confusing and if you are and ICD owner or at least
nice to them when you call, they will help you install it if you have problems.
My falcon came with a CD-ROM driver installed on the Hard Drive. Lastly many
CD-Roms on the market come with ST-Drivers (gif viewers, ect...)

Sure their aren't hoards of CDROM games for the Atari. But their are
dozens of reference disks available which are plug and play.

There is another problem which I think is a TOS2.5 problem (I ave a MegaSte with TOS2.5). I have ATSpeed installed on my machine, and it can be run as either a program or an accessory. If I run it as an acc, and then exit back to TOS, the screen is shifyted to the right, with a ghost image of the part that was shifted out re-appearing on the left. Each time I invoke the acc and then exit, more shifts occur and more "ghosts" appear. I tried using a little auto utility called wrapfix, but it doesn't fix it. I believe this doesn't happen with TOS2.6, but I don't have 2.6 to try it. Oh yes, this wrapping happens with some other programs too, especially some graphics programs.

I've got Sonicflight Capture for the Roland D-10/110/20. (probably D-5 also) Full-featured sound editor, programmer and librarian. Includes utility to save D-10 drum patterns and convert sounds from D-50 and MT-32 to D-10/110/20. Also handy desk accessory to load sounds from within your favorite sequencer. Works on ST series machines. Extra sounds included. $60 including shipping.

>last version. They're developing it for the Amiga only now.

Do you suppose the competition from Calamus was too intense on
the Atari platform, causing SoftLogik to retreat to a machine
that *may* not be able to run Calamus (just guessing, here)?

>I wouldn't program on a PC if you twisted my arm _really_ hard; an 'OS'

:-)

>So, when's Atari going to release a 68040 machine? Or maybe a PPC601
>machine? :-\

Last I heard, Motorola wasn't even going to manufacture the 601
processor, starting instead with a more-advanced unit such as the
602. Given that info, I wouldn't be waiting for an Atari-labeled
601-based system.

612. ST Applications Magazine

Newsgroup: comp.sys.atari.st
Date: 1993-10-10 22:15:28 UTC
From: Paul.Civati@mettav.royle.org
Message-ID: <750399004.0@mettav.royle>
Source record: 199649

[I don't think commercial advertisements are allowed on UseNet
but]
[I thought this would be of interest to the majority of
readers...]

ST APPLICATIONS is a monthly magazine consisting of 60 well-produced
A4
pages which is normally obtained through subscription. Each issue
costs
1.95 UK pounds or 18 UK pounds a year.

The editor is Paul Glover who runs the ST Club, one of the biggest
ST
PD libraries in the UK and well experienced in publishing software
and
books.

ST APPLICATIONS is the ONLY serious, well written magazine for the
Atari
range of computers in this country and well worth the money. All
writers
are freelance and Atari computer owners of some years experience. The
ST,
STE, TT and Falcon are all catered for.

Further details, free complimentary copy (UK or Europe only, sorry)
or
subscription can be obtained from:

The ST Club
2 Broadway
Nottingham NG1 1PS
England
Tel: +44-602-410241
Fax: +44-602-241515

ST Applications can be bought from Toad Computers in the US who will
take
subscriptions, from Paragon Computers in Australia and ABC in Oslo.

The ST Club also has a distribution agency which has a Canada
office:

Worldwide Magazines
Unit 19
Chelmsley Wood Ind. Est.
Waterloo Avenue

Chelmsley Wood
Birmingham B37 8QD
England
UK Tel: +44-21-788-3112 Canada Tel: +1-519-539-0200
UK Fax: +44-21-788-1272 Canada Fax: +1-519-539-9725

SUBSCRIPTION RATES:
UK 12 issues - 18 UK pounds (plus 6 Disk Mags - 26 UK
pounds)
Air Mail Europe - 21 UK pounds (plus 6 Disk Mags - 30.50 UK
pounds)
Air Mail World - 31 UK pounds (plus 6 Disk Mags - 38.50 UK
pounds)

A Disk Magazine is also offered which contains a compilation of the
latest
PD software. It is bi-monthly and not a magazine.

Cheques and postal orders (crossed) drawn on UK banks should be made out
to
SIMPLE LOGIC and CO. (Overseas customers please ask for ways to pay),
sorry
no credit cards at present.

Back Issues cost 2 UK pounds each, 1.25 UK pounds each for 3 or more
issues.
Issues 1 to 12 - 9.95 UK pounds, 13 to 24 - 9.95 UK pounds.

GUARANTEE:
If at any time you wish to cancel a subscription, just write and the
unused
portion of your subscription will be refunded by return of post.

LATEST INFO:
The ST Club is offering a 3-issue trial subscription for 4 UK
pounds,
overseas this is 5 UK pounds for Europe and 8 UK pounds Rest of
World.

Credit card facilities may be available in the new year which will
help
overseas customers.

Using exactly the same options on a Falcon030+FPU I got:

Falcon030 + FPU 68882, 4MB RAM, TOS 4.04 - 0 hour 0 minutes 49 seconds.

I think you were off by a factor of 60, Chris. I estimate that a Falcon
without an FPU will take about 30 minutes to do the job.

>messages as well.
> Does anybody know the reason for these problems or, even better,
>how to avoid them?

I too use a Spectre on a MegaSTe with a 1.44 drive (under
TOS 2.05 too). Anyways, here's a trick that MAY make life
easier for you (at least with floppies):

...assuming you are booting from hard drive (as using a MAC/emulator
without a harddrive is painful):

-put an ST/IBM-format floppy disk (double sided) into the floopy
drive, and THEN boot Spectre (i.e. boot the emulation from the
Spectre drop down menu)

-the MAC system should notice that it is NOT a MAC-format disk,
and ask if you want to format or eject it

-eject the disk; from this point on your floppy accesses should
be fine

...apparently Spectre looks to see what kind of floppy disk is in the
drive - it needs to see an Atari format one when it boots, or
it can't deal with it too well...

Unfortunately, 1.44 floppies are no go though...

Hope this helps (it's been a little since I've booted up Spectre)...

Newsgroup: comp.sys.atari.st
Date: 1993-10-11 05:33:03 UTC
From: garth@splunge.uucp
Message-ID: <1993Oct11.053303.17906@splunge.uucp>
Source record: 199644

The difference between TOS 2.05 and 2.06 that really matters is that 2.05 has a problem with the RS232 routines. Don't despair, though: it's easily fixed. Get ahold of a little AUTO folder program called SERFX2 (Serial Fix 2.0), which was written to address just this problem, uses very little memory, and works like a hot damn. From what I understand about disk formatting, 2.06 doesn't support 1.44 Meg formatting without the AJAX chip (a floppy controller chip that's savvy about the HD format). Any Atari dealer should be able to get the AJAX upgrade installed for you, if 1.44 Meg floppies are a concern of yours.

No I definitely configured to boot from C. Thanks to Brian O'Donnell I
now have the drive working fine using AHDI 5.00. I am getting a new STE
soon so wont be changing TOS till then. Can you tell me more about
"accumulative structural faults in the file system"? I know about the
speed problem but have been using the 20Mb drive for a year without
other major problems.

Trevor.

It seems illogical to call the program Notator LOGIC, if its user interface is not logical.

(I just finished my thesis in mathematical logic)

631. Anybody know anything about LACOM hard disks?

Newsgroup: comp.sys.atari.st
Date: 1993-10-11 09:39:20 UTC
From: ehs@network.cc.jyu.fi
Message-ID: <29b9k8$4ks@tukki.cc.jyu.fi>
Source record: 199612

The day before yesterday the hard disk on my ST died,
or at least became incommunicado. I _suspect_
(although I may well be wrong) that the broken part is
the host adapter, called LAADAP 2 by a German company
called LACOM. (the hard disk was purchased from another
German mail order company years back)

Since AFAIK there are no Atari dealers in this country
and it seems the German ST-Magazin has disappeared from
the newsstands (I haven't really been up on developments
lately) I presently haven't the slightest idea
where to get a replacement for this board (if it indeed
is the culprit). Suggestions etc. are welcome (e.g. does this
LACOM company still exist, and if so how to contact it?
and maybe there are other inexpensive solutions?
is there a way to figure out if the disk itself is in order?)
preferably by e-mail for not cluttering this newsgroup
unnecessarily.

I am _not_ prepared to spend huge sums of money on another
hard disk. Computers (esp. atari computers) are not a big
priority in my life these days.

A strange sort of `support'.

First registration: $1000
and every half year we'd like you to pay an extra $500 for a version
that seems to run a bit better.

I'm thinking of selling my Atari but I've no idea how much I can expect to
get for it. System is :

Atari Mega 2 ST (2mb Ram, 720k 3.5" floppy)
Hi-res mono monitor
External 720k 3.5" floppy drive
Epson FX100 printer

All in excellent condition. How much should I ask for, any ideas? (UK)

Thanks,

>you won't mind people pirating it and not paying you, will you?

About music, no I wouldn't.

As to software---remember this discussion started as follows (the post was
mine): the prices for sequencing packages are CRIMINALly high, therefore
it is justified to use an illegal copy. If I sell software, and I will,
soon, it will be for a reasonable price, i.e. no more than 60 dollars.
(OK, actually I still find this unreasonable, but less would be infeasible,
and I may bring prices down to, say, $40 if I sell more than a hundred copies.)

3d stuff in something other than MC68000? Naaaaaw!!! That would be far too
slow!!! You use assembly most of the time and if you need a small job done,
you write it quickly in something else (like C or BASIC). Take a look at
Scriba Communis Responsi. Programmed in raw 68000 assembler. The source code
(Turbo Assembler sources - they use tokens) takes over 100 kilobytes! ;-)

]How will you use these apps. Don't they require you to be connected to an
]ethernet? Can you use serial lines? Is there a slip and IP stack that works
]on an ST??

I'm the one who made the original request for elm for the ST, and I can
at least tell you how _I_ intend to use it.

I receive my net mail at either of two locations, both of which are Unix
based (well, Xenix based in the case of the one I dial into with my ST).
I collect items of interest in mail folders, which are simply Unix files
consisting of text with appropriate elm-recognizable headers. While I
give these folders appropriate names to make finding information later
easier, finding individual mail messages within a given folder, and ex-
tracting it as necessary, is time consuming and annoying without the
features of elm, or an equivalent. The result is that I tend to leave
piles of mail folders on disk at both Unix locations long after I should
have transferred them to floppy for archiving here at home, where the
only access I have is my Atari ST.

Obviously, what I'm looking for is a subset of the functionality of elm.
I don't need to actually send and receive mail on the ST; I only need to
be able to read a mail folder, save to another folder, and print. I'm a
bit surprised that I seem to be the only one on the net who sees this as
a useful thing to do.

While I did receive a couple of answers to my original request, one (the
one quoted above) indicated that SW was required that I don't have (MiNT
and Minix), and the other pointed to an ftp site that I searched without
success. It appears that porting elm to the ST is doable, but so far it
is not available in a form usable by most Atarians.

But Logic includes tutorials(!), even tutorials that are specific to the
Atari (as well as some for the Mac). As for the quick reference command
card it doesn`t seem logical to include such a thing considering the fact
that you can define all keycommands yourself.
In my opinion Logic IS logic to a hitherto unknown extend, the problem is
that there is so much - new - you can do, that it in all very eysily
becomes quite overwhelming!
However, one should be aware, that the Emagic-lot seems to be following
the standard-interface-rules of the Mac quite disciplined - something not
that common in the Atari area - implying that when you start of some
logical `experiments` you`re supposed to - intuitivily - use the Mac
routines - after all we are not talking neural-net or anything like it.
As I see it the major drawback of the current Logic versions (Atari 1.5
and Mac 1.6) is that you can`t implement hex-coding (no real RMG),
therefore you can`t build e.g. your own task-specific editors, and I`m not
sure they will include it because the SoundSurfer is supposed to handle
all that more or less integrated with or in Logic. And that`s another way
of getting hold of more of your money.

I have no idea about PovRay execution times, but I can definitely
confirm that 030 + fpu make a big difference. When I got my TT
and tried out those -m68020 -m68881 flags, some programs werde
sped up by two orders of magnitude approx. Just make sure the
math-68881.h file is included properly.

>You could mail me the compiled
>version of your test and I'll run it on my Falcon+FPU and post the result.

Better even, post diffs, or sources, or binaries. I'd be
interested too. Thanx in advance.

I have a book on "Murphy's Computer Laws". One of them states
that idiot proof systems are only used by idiots.

Who cares about "plug and play"? In fact, what is it really,
other than a marketing hype word? If you want a CD ROM on your
TT, go ahead and get yourself one. If you have problems setting
it up, you're welcome to post your questions to this group. But
regarding "plug and play", I really can't offer anything except
the suggestion that you get yourself a plug and have fun playing
with it.

BobR,
You can buy a CD-Rom drive from Toad Computers, also there are PD stuff
available for CD-Rom and there is a driver for Calamus SL for the
Kodak Photo-CD format sold by DMC Publishing. Not too much to figure
out here.

Regarding the last point - Cubase Audio has this facility. Various samples can be stored in RAM and triggered internally or via a MIDI keyboard. The configuration is similar to most hardware samplers where you can map the samples across the keyboard, set level, pan, etc.

>Are you saying the Falcon TOS has the MetaDOS drivers for CD-ROM drives
>built in..?

Are you saying that DOS (3.3/5.0/6.0) has the drivers for CD-ROM drives built in?
Plug-and-play my ass ...

You have to install drivers on a PC in order to use a CD-ROM drive, and you, of all people, should know that, Bob. I have a very nice NEC CD-ROM drive installed in a ZEOS workstation about 25 feet from where I'm typing. I haven't actually USED the damn thing yet, because I need to obtain SCSI device drivers to use a SCSI device on that machine. It's a bit like needing the ICD CD-ROM drivers on a suitably equipped ST, wouldn't you say?

Cheers.

>
>What I said was that Atari has never used their lawyers and millions of
>dollars to crush STReport. If there really WAS any "slander", don't
>you think they would have done so long ago..?
>

What we have here is a language confusion. One party 'slanders' another by making hurtful statements about that other party. That's common English usage. One party may commit slander against another party by slandering that other party in the common sense, and meeting some other tests. That's a legal usage. They aren't the same. Moreover, even if a party has been slandered in the legal sense, there are plenty of reasons why that party might not choose to bring legal action.

Libel is even trickier, and I may not have it exactly right: In popular usage, 'to libel' someone is essentially synonymous with the legalism 'to commit a slander against' that person. In legal usage, one libels another by doing in writing essentially the same thing as one did in speech when slandering another. And even there, the aggrieved party needn't bring legal action.

There are 2 interesting questions here: Should the net be treated more as speech or more as writing, and Why are you egging Atari on to sue Ralph Mariano?

Steve

>(OK, actually I still find this unreasonable, but less would be infeasible,
>and I may bring prices down to, say, $40 if I sell more than a hundred copies.)
As software-author you can expect about 10% of the sales-price of your
product. So that's 600 $ if you sell 100 copies and take 60 $ for each.
What kind of rubbish do you want to produce for 600 $? A program like
Notator Logic needs some man-years (it's a complete new developpment,
not a simple update). Ok, ok C-Lab sold more than 100 copies of Notator
SL (in fact about 30-40000). But : The times they are changing. The
market for Atari software has become VERY SMALL. Remember this before
getting bankrupt - or talking nonsense again !

> and with the software development that is going on now is becoming
> a machine that I'm looking at, you can see from a post a little while
> back the types of software available :::
^^^^^^^^^^^^^^^^^^^^^^^^^ True, there were
several types of software, unfortunately there were few actual
titles listed (79 items listed I believe). Of the item some were hardware,
and many were under development (ie. good possibilty of vaporware)

>
>Scott

Uh Scott, I hate to pop your bubble, but there's a lot more CD ROM tech-
nology than PhotoCD (which BTW is still not commonly used on any platform
yet). Although I am an avid Atari fan, it's time to realize that there
really isn't much support in either hardware or software for the Atari
line. Peter pretty much told it like it is, no matter how good the Atari
computer is (was?), it hasn't kept up with Macs and PCs. I think we're
all dreaming when we try to compare an Atari with a PC or a Mac.

^^

Doesn't that really depend on your application? The TT with a Graphics Board andd TTRAM with 32Meg's RAM (or in some super extreme cases 256!, haven't seen one yet though *grin*) is still quite impressive! General Applications on th Atari tend to be cheaper too for what they offer as compared maybe to a MAC or PC...

....I do agree that the Atari Market has shrunken really bad..compared to what it used to be like...and even if many of us (and I often feel like that too) have seen and believe even that Atari will go under...or screw up again even more...or that they might mismanage..or..or..or..etc.

We still stick with Atari..and why is that? 'cos it's a great machine still and yes we are changing platforms...but Hey!..I like it :) *grin* and I still support Atari, still stick to it...if there were no people who stuck to Atari..then Atari was seriously gone...but there still are..and why is that? ... dunno....

Yat@Lexicor

ps: Just thought I'd add my two cent's worth...oh btw..anyone know more about the Clones as of recently? i.e GeSOFT's Eagle?

There is a program called FONTRIX which allows you to do that and quite a few fonts available that work with it. As I recall, these fonts have a .FNT extender. Or better yet, get Warp 9, it has that capability as one of its' features and even comes with a font editor so you can fix anything in a font that you don't like.
I think Fontrix was a desk accessory, but I'm not sure. I'll try to dig a copy up.

>Now, for those of you who think a Falcon030 is the same performance as a
>'486dx2/66, it would've traced the image in about 20 seconds. The
>Falcon would probably do it in 50 minutes (and that's being generous).

A Falcon with an FPU would take about 1 or 2 minutes.

Anyone doing raytracing work without an FPU is insane. Just look at the
figures for the 386 vs. 486 - the 486 has an FPU (on chip), hence it was
100 times faster.

Some people just don't understand how BAD software floating point calculations
are, or how much FP work is done by raytracers.

For comparison, here is the figure for the same scene, but USING POV 1.0
(the old, slow version) on a 33MHz TT with FPU:

0 hours 2 minutes 43.00 seconds

I can't wait to try out POV 2.0 - I hear (from Chris and others) that
SPEED is the Big Improvement.

>Why are you egging Atari on to sue Ralph Mariano?

Interesting.. it really takes quite a stretch of imagination to get
that out of anything I've said.. care to elaborate on how you came to
that conclusion from what I've written..?

I have said two things.

1) Atari has NOT sued STReport for libel.

2) Knowing Atari as I do, they would gladly do so, for no monetary return,
for the "principle of the thing" IF they could.

My conclusion has been that they know they haven't been libeled
(or "slandered" as Robert Jung's original accusation was).

RJ has been strangely quiet about answering my question regarding his
knowledge of "STReport's editor never missing an opportunity to slander
Atari".

October 5, 1993

M a s t e r B r o w s e 3 . 2
"""""""""""""""""""""""""""""""

Copyright 1993, Michel Forget
Electric Storm Software

There is a new version of MasterBrowse available!

The file, for reasons I cannot fathom, has been named differently at
different places. Using FTP, you can get it at the following addresses:

atari.archive.umich.edu /atari/Newitems/mb32.zoo
ftp.cs.tu-berlin.de /pub/atari/Utils/Viewer/mb32_bin.zoo
ftp.tu-clausthal.de /pub/atari/Newitems/mb32_bin.lzh

If you are using a mail-server, you may not need the entire path shown
above. It depends on the mail-server. The file has also been sent to
comp.binaries.atari.st for distribution, and should also appear soon (with
the name MB32_BIN.ZIP) on CompuServe, GEnie, and Delphi.

For those who have never used MasterBrowse before, a detailed description
of the program will follow this list of new features and bug fixes:

~ ~

MasterBrowse 3.2

o The method of calling MasterBrowse has changed -- if you do not use
MultiTOS, then the calling method has not changed for you. If you do
use MultiTOS, installing MasterBrowse requires two steps:

1. In GEM.CNF, create an environment variable called MASTERBROWSE
(the case is important) that contains the full pathname of
MBROWSE.PRG (the MasterBrowse executable). Example:

setenv MASTERBROWSE=c:\system\mbrowse.prg

2. In GEM.CNF, change the SHSHOW environment variable so that it
contains the full pathname of MB_CLNT.PRG (the MasterBrowse
client-program). Example:

setenv SHSHOW=c:\system\mb_clnt.prg

If you want to install an icon on the desktop for MasterBrowse, make
sure that the icon is for MB_CLNT.PRG -- not the MasterBrowse
executable! Also, you must ensure that the program path is set
to "Top Window" and the parameter style is set to "Full Path".

Having a client-program allows MasterBrowse to be more intelligent about the way it operates under MultiTOS. The MasterBrowse client checks to see if there is a copy of MasterBrowse already in memory. If there is, the client-program will initiate a communication with MasterBrowse and tell it to load the file(s) you selected. This ensures that there is only one copy of MasterBrowse in memory at all times.

o A bug was fixed in the keyboard redefinition; if the user selected a key definition already in use, there would be no error or warning. The user is now offered the choice of aborting the operation, or exchanging the conflicting keyboard definition with the keyboard definition that is being changed.

o A new feature has been added to the keyboard redefinition! The user can now permanently clear a keyboard definition. This operation asks for confirmation, since a key definition that has been cleared can not be redefined at a later date without creating a new configuration file.

o The "General Options", "Display Options", and "Archive Options" (formerly "Decompression Options") menu entries have been moved from the "File" menu to the "Window" menu.

o MasterBrowse now supports the Drag & Drop protocol if you have MultiTOS installed (or a multitasking operating system that supports the AES 4.0 system calls). This means that you can drag an icon/file from a desktop window (or an application window if the application supports the Drag & Drop protocol) to a MasterBrowse window. MasterBrowse will load all the files that were dropped onto the window.

o A really silly bug was fixed; MasterBrowse had the start of the block and the end of the block reversed. It will now jump to the correct positions.

o MasterBrowse now conforms to the Atari standard keyboard definitions. Thus, ALL of the keyboard definitions have been changed.
If you do not like them, you can change them using the keyboard setup function.

o MasterBrowse now uses the elipses ("...") in menu entries.

o A bug was fixed in the window manipulation routines. The "fuller" now works as it should. Clicking on it once will make a window take up the entire screen, and clicking on it again will return the window to its previous size. If the window is already as big as it can be when the first click is made, the window will be made as small as it can be.

o MasterBrowse no longer uses progress maps, since they were not available under MultiTOS. Removing the progress maps makes MasterBrowse more than ten kilobytes smaller.

o MasterBrowse now aligns windows on a byte boundary, so scrolling speed may improve in some situations.

o A bug was fixed in the "General Options" dialog box. The "Movement Base" editable text field would not change when the user tried to edit it, and then it would vanish completely the next time the user entered the dialog box. Both conditions have been fixed.

o MasterBrowse now allows you to change the size of a window even if a window has no "sizer". Simply click (and hold down) the mouse button in the bottom right-hand corner of the window. A rubber box will appear on the screen, which allows you to change the size of the window exactly as if you had clicked on the "sizer" gadget.

o The archiver command lines are no longer corrupted when the configuration file is saved.

o MasterBrowse can now handle compressed text files under MultiTOS. It now runs the external archive in a window (if it is a TOS/TTP program) and puts an alert box on the screen prompting the user to press return when the archiver is done.

~ ~

Everyone who owns a computer has, at one time or another, needed to view the contents of a text file. The text file viewer supplied with Atari computers will allow you to do this, but it is lacking in many respects.

MasterBrowse is a replacement text file viewer for any Atari computer, in any resolution with a size greater than or equal to 640 X 200. It offers many features that the Atari text file viewer does not:

o MasterBrowse works with all operating systems, including MultiTOS. It should also work with MultiGEM, Mag!X, and Geneva. Under MultiTOS, MasterBrowse will even create a pipe so that other programs can tell it to open and display files. MasterBrowse will also use the Drag & Drop protocol, so a file/icon can simply be dropped on a MasterBrowse window to be displayed. MasterBrowse can also communicate with itself (to avoid loading more than one copy of the program at a time -- the client-program that MasterBrowse uses will simply tell the currently loaded copy of MasterBrowse to display the files instead of loading another copy).

o MasterBrowse has an extremely fast GEM user interface, which makes use of raster copy screen updates, GDOS fonts, pull down menus, windows, optional non-modal dialog boxes (and non-modal alert boxes), colour, and more. MasterBrowse also provides keyboard shortcuts for every single function.

o MasterBrowse can use the command line (of course) to open documents (or open a document batch). The ARGV, xArg, and standard command line formats are supported.

o MasterBrowse allows you to have a virtually unlimited number of documents open at the same time, restricted only by the number of free window handles and the amount of memory available.

o If you do not like the default keyboard shortcuts for menu entries, MasterBrowse will allow you to change them!

o MasterBrowse allows you to use all of your familiar movement keys. You can use the arrow keys, the application keypad, or the space bar and the return key.

o MasterBrowse allows you to move in any direction inside a document, as you would expect. What you might not expect is that you can tell MasterBrowse how far it should move when the movement keys are pressed. How about moving two lines down instead of one? Or perhaps three lines suits you better?

Do you still want more? Keep reading.

-You can jump to a specific line, a specific page, the start of a block, the end of a block, or any of ten personal "bookmarks" that MasterBrowse supplies for each window.

o MasterBrowse allows you to move through a document (by lines or pages) using a special Quick Scroll Mode. It uses the shift, control, and alternate keys so that the scrolling speed is not limited by the key repeat speed.

o MasterBrowse also offers you the ability to search for up to three strings at the same time inside a document (case sensitive or case insensitive), starting at the top of the document or the current position. If a search is performed starting at the current position within the document, MasterBrowse can be told to search in forward mode or reverse mode. After the string is found, another command may be used to find the next (or previous) occurrence of the string. When strings are found, they are placed in the centre of the screen and highlighted.

o MasterBrowse also has block functions. You can mark a block off, and then save it to disk, print it, or write it to the clipboard. You can decide how the block is marked on the screen. MasterBrowse can also be told to remove the block markers after a block operation is completed. Blocks are marked using the -MOUSE-. More? A block can even be extracted from a larger document and placed inside a MasterBrowse window!

o MasterBrowse is a master printer. It can print a document (or a block) with page headings, page numbers, line numbers, a description of the file or block, or a combination of the four. It can even print an identification string for those people who share a printer between more than one computer. You can also save a block to disk (or the clipboard), with all of the same options available. MasterBrowse can also be configured to use the special features of your printer, such as bolding,

italics, and underlining.

o MasterBrowse will allow you to write documents to the disk, with all of the formatting options available for printing/writing blocks.

o MasterBrowse gives you complete control over your windows. You can cycle through them, change their titles, shrink them, close one, close them all, or get information about them all from the keyboard (or the mouse). MasterBrowse also allows you to remove the vertical window scroll bar, the horizontal window scroll bar, or both scroll bars. In addition, each MasterBrowse window can have different scroll bar settings. The size of a window can be changed by clicking in the bottom right-hand corner of the window, even if the window does not have a "sizer" gadget.

o MasterBrowse saves the positions of the first seven windows (if you want it to), so you have complete control over where your documents appear and how your screen looks.

o MasterBrowse allows you to load and save different configuration files.

o MasterBrowse allows you to load and save bookmark lists.

o Every window has a set of block markers and a set of ten bookmarks to itself.

o MasterBrowse supports batch files! If you use a certain group of documents often, just load them up and tell MasterBrowse to create a batch file. One double-click on the batch file, and they will all be loaded again.

o MasterBrowse also has support for the clipboard! A block can be written to the clipboard (with or without formatting) or the clipboard can be read into a MasterBrowse window.

o MasterBrowse allows you to interface (transparently) with as many as four external archivers, so that you can save space by storing your text files in a compressed format.

The features listed above barely scratch the surface of MasterBrowse!

Support for Photo-CD means that they can read PCD files. But you'll
have to install a CD ROM driver nevertheless. And in fact, Atari's
drivers only support TT-SCSI and the old CDAR504 on ACSI.

Oh is it? I wasn`t aware of that! Sorry :-) In that case the price seems
even more alright (as said before). The program is great, really great,
and it is not an upgrade (it isn`t even CLAB), it`s completely new!

Hello everybody,

I am looking for an astrology program for the Atari. That is
a program which can assist me in making horoscopes and stuff
like that. I know there are a few programms of that kind
out there, but I still haven't found what I'm looking for...
So perhaps someone can help me?

Greetings

Florentijn van Kampen

684. Do you want a 36 MHz Atari ST?

Newsgroup: comp.sys.atari.st
Date: 1993-10-12 09:50:20 UTC
From: Christiaan_Kamstra@p1.f503.n285.z2.fidonet
Message-ID: <2cba7df7@p1.f503.n285.z2.fidonet>
Source record: 199407

Hi everyone!

Note: this is *NOT* an advertisement or something. I bought the thing and it really works great. I want to share my experiences, so you may be able to enjoy it too!

I recently bought a speed-up kit for my ST. Its from a german company called H & N.

There are two kits available:

* HSB 640 28 MHz (about $200)

* HSB 640 38 MHz (about $350)

These are some specs:

* 68HC000 processor
* optional 68881 coprocessor
* 28 or 36 MHz clockfrequency
* 64 KByte cache (data- and instruction cache)
* asynchronous bus-timing
* SMD technology
* Cache can be switched on an off
* Can be switched back to 8 MHz

It really works great! I have not heard of any problems with software yet. (very stable)

Installing is quite a job. The old processor has to be removed and a socket is installed in its place. The board measures about 8 cm by 10 cm. It is placed in the socket. The blitter has to be removed. (you won't notice the speed increase it gives anymore) There are two little sockets on the board on which another board can be fitted (the co-processor board)

You can opt for switches or a software way to switch the speed and the cache. It is also possible to connect a little LED, which indicates the speed.

If you use NVDI with this board it will REALLY knock your socks off!

If you are interested the adress is:

686. ANNOUNCEMENT: New PD games

Newsgroup: comp.sys.atari.st
Date: 1993-10-12 10:00:45 UTC
From: ae-a@minster.york.ac.uk
Message-ID: <750420045.16090@minster.york.ac.uk>
Source record: 199351

I have uploaded the following programs to:
atari.archive.umich.edu
nic.funet.fi
ftp.Germany.EU.net

linecras.lzh
mazewar.lzh
video_g1.lzh

All of these files are games (colour) and should work on all STs with TOS versions up to and including 1.62 (They might work on higher TOS versions, but I have not tried this. If you have, tell me if it works or not).

LINE CRASH (linecrash.lzh)
This is a game that uses the extra joystick ports on the STE and the printer port joystick adaptor to allow up to 8 joysticks to be added (although less than eight people can play). On ST computers without the two extra joystickports on the side, up to four people can play.
The idea is to trap your opponents in the style of TRON lightcycles (ie, you leave a line behind your vehicle), and avoid being trapped yourself.
Included in the LZH archive are docs for building your own joystickadaptors.
Written using STOS basic.

MAZEWAR ST (mazewar.lzh)
This is another game for 0 to 8 players. The idea of this game is simple. Shoot your opponents while avoiding being shot yourself. Eight tanks (some can be computer controlled) negotiate a maze. Some walls are indestructable, and some can be shot.
Included in the LZH archive are docs for building your own joystickadaptors.
Written using STOS basic.

VIDEO GAMES I v 0.5 (video_g1.lzh)
Play three games at once on the same ST with the same joystick.
Yes, it is possible. You can simultaneously play Pacman, space invaders, and pong, using combinations of movements of one joystick. Each game is overlayed transparently on top of the other games.
Written using STOS basic.

I have written all of these games myself, and they are Freeware/shareware/public domain.

The last time I checked, These programs have not yet been accepted by nic.funet.fi and ftp.Germany.EU.net.
They are however in /atari/New in atari.archive.umich.edu

Please mail me any comments, etc.

Andrei Ellman (ae-a@minster.york.ac.uk)

REDELFS JOHN W (tsjwr@acad3.alaska.edu) wrote:
: Is there anyone out there who is actually doing PGP on the Atari? I'd sure
: like to hear from you.

I ftp'd the 2.3a package from Technical University of Clausthal, Germany
tonight. It works and I'm using it.

: I've got the source code, PGP23A.ZIP and the diffs from the Umich archives,
: PGP23AST.ZIP, but I'm not a C programmer; and it looks pretty intimidating to
: me.

I'm a programmer, and trust me - nothing could be simpler. A couple of
my non-programming friends built their PGP programs on SunOS. All you
have to do is make with the appropriate makefile. I had zero errors in
my build. All thanks to the superlative professionalism of the gnu
folks. In the Atari case you have the additional work of applying the
diffs and getting the gcc compiler.

: I want to _use_ this program, not become a software engineer.

Yeah, me too. Although eventually I'll build it for the ST, you get an
executable program from Clausthal. No muss, no fuss.

: Can out there advise me?

The program is character-based, so be prepared with a shell or CLI.
Other than that, RTFM (the whole manual, not just the first 2 docs as I
did).

Finally, have fun.

Thanks Wolfgang Ley and Clausthal.

I have just downloaded the latest Maggie (11) file from some ftp site and it gives a 80 + list of Falcon specific programs.

Some of which look mighty interesting ...

It does that sometimes on RGB too because my hack is very ugly. Do you have
bottom overscan on VGA?

No it's the STE-version I used to make the F030 one. I wanted to use the TT
version but I did not succeed.

My OMTI SCSI Hard Disk has stopped working - I think the ST Host Adapter Board is at fault. It is an ICD one - P/N 90107. Is it possible to buy a replacement? Where from - UK? Another option is to buy the ICD Link and download the data onto my new Falcon, is it just "plug-in-and-go"?

My first Falcon (4Mb/127Mb) had 21,464 bad sectors on the harddisk!

.Ian.

The Mausnet is a german net only and you may send mail to it by appending
a @maus.de suffix.

The Fidonet is international and you can send mail to it by using the suffix
@p?.f?.n?.z?.fidonet.org, where ? are the appropriate fido adressing numbers.
There may be a more efficient way to adress the fidonet - e.g. german fido
members from within germany - but the above mentioned will surely work.

In both cases, you must use the full recipient name like Torsten_Scherer@...
to adress someone.

I bought my GCR off a guy who has a MSTe, and he said that his was
unusable for the reasons you describe above, even though it works great
on my ST. The reason is, Spectre plays tricks on the ST's floppy
controller which depend on a certain level of (low) quality...the
controller in the MSTe is actually _too_good_ for GCR to work reliably, so
you're out of luck, I guess, until Dave Small comes out with a new version

>up like they do when they read it.
>
>That wouldn't be my style at all.
>
>BobR

Sometimes I get the feeling that Ralph _really_ is making up a lot of things. As you said, a lot of times his editorials and rumors section don't make a lot of sense. They're written in a very nebulous way so that most of the time I don't know what the heck he is talking about.

If something comes up in the future that fits his writing, he'll then claim credit. If nothing comes up then he'll just say "wait and see" or "I never predicted/wrote that -- read it again".

His nebulous style of writing frees him from accountability.

For example, sometimes he'll write about the "revolving door" or that "heads will roll". And then when Atari lays off some employees, he'll jump up and down and try to claim credit.

But what's so hard about predicting layoffs in a major recession? What computer company hasn't laid off employees?

What's so hard about predicting a "revolving door"? I don't know about you, but in my experience, there are always people entering and leaving any place of employement.

But then Ralph will try to claim that he has some inside sources for these "ground breaking" stories.

I could do the same thing. Here's a prediction: A major computer company will release shockingly bad results and be forced to lay off a lot of people.

If the above comes true, I can claim to have inside sources.

If it doesn't, I can alway say, "wait and see" since the probability is high that it will eventually come true.

Or, if someone then accuses me of lying or making things up since [insert computer company] is doing well, I can always say, "But I didn't say that [insert computer company] is doing badly -- read my report again."

In addition, on the Fnet, I've seen Ralph try to take credit for stories that appeared in ST Format or the other European magazines when it comes to rumors about future products from Atari.

He'll try to make it appear as if he has some inside sources for those rumors but all he did was read the rumor section of those magazines and reprinted them in STR. I distinctly remember several instances when I read those rumors in the European magazines a week before they appeared in STR. And Ralph never mentions their true source.

Why does Atari get so bent out of shape with STR and Ralph? It's simple. Because of Ralph's nebulous reporting style, it's readers are always jumping to conclusions. Then Atari officials have to waste so much time and energy trying to combat the negative rumors.

There was a recent example of this. Atari has always been very up front with the availability of the Jaguar: Limited shipments to New York and San Franciso for this year with wide available for first quarter 1994.

But how does Ralph report this? He waits 3 months and then posts the following message (paraphrasing) on the Fnet: The latest "word" is that the Jaguar won't be available until AFTER Christmas. (sign)

All of a sudden, there is a rash of messages and rumors on the Fnet that Atari has messed up again. And Atari has to waste precious time and energy combating these negative rumors.

I have TOS 1.4 and have been seeing this problem when running progs that
do Setscreen. I know because I wrote a game that uses Setscreen and it does
this. The whole screen get shifted over to the left by a third of the screen
width. I have to move my mouse through the left side of the screen to the
right side in order to access the DESK menu. Funny thing is that if I run
Megaroids it fixes the problem.

Are you saying there is a utility that will fix it? Where can I get it? AA?

Other apps that cause this phenom are Sebra and the newly post Rayoid game.

> up the full line of Atari software. It just hasn't happened.

> If anyone has good information, I would be forever in your debt.

I have a suggestion: Call Toad computers (1-800-448-TOAD) and buy a
copy of Current Notes. Then, you will not only be on TOAD's mailing list
(they are a great ST mail order place), you will also have an American
ST magazine that lists several other mail order and repair places.

Current Notes, coupled with c.s.a.st, has made my ownership of an ST something
other than an expensive mistake. I highly recommend the magazine. I am
not involved with CN in any way, except as a satisfied customer and long time
subscriber.

From: randyh@sad.hp.com
Message-ID: <CEsKqE.Kqq@srgenprp.sr.hp.com>
Source record: 199573

I have a Supra 20 meg drive for sale. It has a miniscribe hd and supra host adapter and case. It does NOT have a power supply. I used a PC power supply which I am now using with my new harddrive.

This drive has worked for me for 3 years. There are a couple of bad sectors but they can be mapped out.

I would like $90 for it.

Also have a STAR NX1000C 9 pin color printer. Includes extra unused color ribbon. Several built in fonts. 200 cps in draft mode. I will include screen dump and other utilities for the ST.

I would like $50 for it.

Buyer pays shipping.

>As to software---remember this discussion started as follows (the post was
>mine): the prices for sequencing packages are CRIMINALly high, therefore
>it is justified to use an illegal copy. If I sell software, and I will,

There is no law against high priced software. As such the prices are not
criminally high. Making and using illegal copies however is illegal, and
most importantly it is insulting to those that spent part of their lives
for creating something you obviously like, but aren't prepared to pay
the price for. I could give loads of analogies so you would understand
why your point of view is ridiculous, but analogies have been misused
all too often in this discussion, so I won't.

>soon, it will be for a reasonable price, i.e. no more than 60 dollars.
>(OK, actually I still find this unreasonable, but less would be infeasible,
>and I may bring prices down to, say, $40 if I sell more than a hundred copies.)
What do you mean 'less is infeasible'? Many companies succeed in selling
software for less than $40. After all the only real costs involved are
floppy and printing of docs.
By the way does your $60 program also include 3 midi ports like the
Notator Logic dongle does?

Erlend.

> all dreaming when we try to compare an Atari with a PC or a Mac.
>

Well I do agree that there are less programs out there for the atari line
than PC's --- that's just the facts --- but how many good DTP,WordProcessor,
Spreadsheet's do you need ?

When it comes down to it it's a matter of taste on what platform one buys.
I do know that Photo-CD can be extremely usefull in DTP work, also using the
Cyrel Sunrise card one can extract from real time video for DTP work along with
True Color Display, and compatible for up to I believe 37" monitors.

Also for the newest popular laser printers there are always new drivers written.
(ie. HP laserjet 4)

DMC Publishing also supports a driver for the MicroTek line of true color flat bed
scanners for Calamus SL.

These 3rd party developers put out high quality stuff and being such you don't really
need (although would be nice) 20 programs that do the same thing you only need one.

Also there are many professional users in the advertising arena, music industry, publishing
arena that use the atari line of products and are satisfied and have what they
need for their jobs.
^^^^

This also goes for the other computer makers as well : Apple,IBM, etc...
for each of these they too are no doubt satisfied with what they have

------

In a nutshell there is alot more to computing than CD-Rom software. And for the
Atari line there is a program that can fit just about any need if you have the cash *-)
like any platform.

You made the statement that there "isn't much support in either hardware or software
for the Atari line", well lets qualify this, actually there isn't mass support for the
Atari line, but the support that is there, is quality. ^^^^
^^^^^^^

Source record: 199576

In article <92944@cup.portal.com> Bob_BobR_Retelle@cup.portal.com writes:

>Why are you egging Atari on to sue Ralph Mariano?

Interesting.. it really takes quite a stretch of imagination to get
that out of anything I've said.. care to elaborate on how you came to
that conclusion from what I've written..?

I have said two things.

1) Atari has NOT sued STReport for libel.

2) Knowing Atari as I do, they would gladly do so, for no monetary return,
for the "principle of the thing" IF they could.

This is all getting rather rediculous. Look, why would ANY buisiness
anywhere sue someone just because they are annoying? If you sue
someone and you loose, then you have to pay the other parties legal
fees as well as your own. Sure sounds like a raw deal to me.

STRepeat may have said things that are very close to slander, but
which you cannot actually sue for. For instance, I could say that I
had heard from a third party that BobR is a !@#^&*@^*(@ and sleeps
with *CENSORED*. If I had personally called you that, you might have
recourse, but otherwise you are stuck.

Why do you think authors like Kitty Kelly get away with slanderous
books? Why do you think tabloids can print that Loni Anderson left
Burt to marry a cow?

Also, right now you appear to be the last person on earth actually
reading STR, so it is doing no-one any harm. If Atari were to sue
STR, then it would just focus a lot of negative attention on them.
Who wants that? Yet another reason to just ignore them. If STR were
read by millions, I think you would have seen a suit by now.

My conclusion has been that they know they haven't been libeled
(or "slandered" as Robert Jung's original accusation was).

Whatevever, your opinion.

RJ has been strangely quiet about answering my question regarding his
knowledge of "STReport's editor never missing an opportunity to slander
Atari".

After a number of attepts at explaining the situation, I would fall
strangley silent on this topic as well... in fact I think I will after this.

>(ie. HP laserjet 4)

Do you know if there's a HP4 driver for Speedo? I haven't heard or seen
anything about it even though the printer has been around for over a year.

>DMC Publishing also supports a driver for the MicroTek line of true color flat
>bed scanners for Calamus SL.

They do, but at a cost. I'd like to buy a Microtek scanner, but I'm not
prepared to pay $200 (which was the price DMC quoted me at CeBIT in March) for
a driver (read: *NO* scanning software, just the driver to aquire the image
directly into Calamus). Mac & PC users get their drivers *and* scanning
software bundled with the scanner.

712. Re: STACY BOOK

Newsgroup: comp.sys.atari.st
Date: 1993-10-12 18:22:15 UTC
From: lancer@archimedes.WPI.EDU
Message-ID: <LANCER.93Oct12182215@archimedes.WPI.EDU>
Source record: 199593

0{{ On 12 Oct 1993 21:57:21 GMT, jpoling@magnus.acs.ohio-state.edu (Jeff A Poling) said:
jpoling> Were the STacy and ST NoteBook ever produced?

Yes and (I just found out) yes. There were a good number of STaceys
produced a few years ago and a few people on the net even have 'em!
As for ST Books, there were apparently 5000 produced and then Atari
decided to concentrate on the Falcon and Jaguar and dropped the
product (and the ball, IMHO)...

jpoling> If so, where would be a good place to find one.

Toad Computers has advertised both in the past, but I'd bet they're
sold out... Try Rising Star or D&P or L&Y. All these companies
advertise in Current Notes... i don't remember their numbers right
off...

.s.

PS: And here're some that weren't produced: The ABAQ/ATW, the ST
Pad, the 160ST...

713. RFD: rec.autos.simulators

Newsgroup: comp.sys.atari.st
Date: 1993-10-12 18:25:40 UTC
From: afzal@divsun.unige.ch
Message-ID: <rec.autos.simulators-RFD1@uunet.uu.net>
Source record: 199580
Cross-posted to: news.announce.newgroups,news.groups,rec.autos,rec.autos.driving,rec.autos.sport,comp.sys.amiga.misc,comp.sys.atari.st,comp.sys.ibm.pc.games.misc,comp.sys.mac.misc

```
This is a Request For Discussion on the creation of a newsgroup for
computer simulations of automobiles.

Group Name
----------

rec.autos.simulators

Status
------

Unmoderated

Rationale
---------

There is an increasing amount of software on the market that
provides simulation of automobiles (both in competitive and
non-competitive circumstances). This software is often
multi-platform and so no platform-dependent newsgroup would
provide an appropriate discussion forum for it. In addition,
rec.autos is an inappropriate forum as that group is not intended
for discussion of software.

It is intended that rec.autos.simulators would provide a forum where
people could discuss such automotive simulation software
irrespective of the platforms on which it runs, and that abstract
technicalities of such software could also be discussed.

Email I have received, plus discussions in various newsgroups
(comp.sys.ibm.pc.games.misc, rec.autos.sport) and on the F1 Grand
Prix mailing list, has made it clear that such a group would be
welcomed by many usenetters.

Charter
-------

This newsgroup will be used for discussions of computer simulations of
automotive vehicles, irrespective of the platforms on which said simulations
are supported. This will include simulations which have a competitive
component (racing simulations) and those which do not. Topics will include
(but are not restricted to):

o Global characteristics of particular simulations.
```

o Platform-dependent characteristics of such simulations (as a convention, it is suggested that such discussions list the platforms in the subject header, e.g.,

Subject: [ibm-pc,sun] Blog's Yugo simulator

o Design and implementation issues of such simulations.

o General discussion of automobile simulations.

Voting

If all goes according to plan, voting will take place 21 days from the posting date of this RFD.

This RFD is being posted to the following newsgroups:
news.announce.newsgroups
news.groups
rec.autos
rec.autos.driving
rec.autos.sport
comp.sys.amiga.misc
comp.sys.atari.st
comp.sys.ibm.pc.games.misc
comp.sys.mac.misc

Follow-ups directed to news.groups

715. Re: GEM NetHack (was Re: NetHa

Newsgroup: comp.sys.atari.st
Date: 1993-10-12 18:42:00 UTC
From: Stefan_Damerau@sl.maus.de
Message-ID: <A53963@SL.maus.de>
Source record: 199514

In article 29chie$g21@charm.magnus.acs.ohio-state.edu Pandemonium wites:

D>Hey, I just downloaded GEM NetHack, but it crashes every time I load
D>it! I'm (not yet) running it under TOS 1.04 on a Mega-4 with an ISAC
D>card and a T25 (68000). The screen resolution is 1024*768*16 colors.

As far as I experienced NetHack (Release 3.1.3) has problems with the
68000 proc. I've started it on my MegaSTE in both modes, GEM and TTY.
With GEM in the NETHACK.CNF I only get two bombs. With TTY I can play
but after being killed I get the HiScoreList and then a message saying
'suddenly the dungeon collapses' ... bad window id# ?????
After this I get the HiScores a second time and - after pressing a key - I
return to the Desktop.
No Problems with my Falcon though ...

Tschuess
Stefan

I did it here at my UNIX-site like this:

cat spacejnk.01.zip spacejnk.02.zip spacejnk.03.zip > spacejnk.zip

(You write that to your shell, and it will take the three parts and
combine them to spacejnk.zip).

720. Atart ST hardware/software sale

Newsgroup: comp.sys.atari.st
Date: 1993-10-12 19:37:02 UTC
From: blincoln@garbanzo.ssesco.com
Message-ID: <CEsuHq.ED9@ssesco.com>
Source record: 199585

I have a complete DTP system for sale and a bunch of other stuff too.

please email blincoln@ssesco.com for a full list of the games and
software available...

HardWare: $$$
Atari SLM804 with drum that has seen ~2000 Sheets 400
+ extra drum that is 12K+ (i use it when im doing
+ multi-hundred pages of scrap)
Atari Mega4 ST with ICD Adspeed 16 300
2 40Meg Seagates in a worn shoebox 150
HandScanner w/touchup 50
Viking 19 (21?) inch mono monitor and controller board 500
Color SC1224 Atari Color Monitor 150
2400 baud avatex 25

Software:
CalamusSL 200
+ a couple of the add ons...
Calamus Outline art 50
Touchup (interface for handscanner) w/scanner 50
Stalker 3.0 + 25
+ Steno (whatever version was out when 3.0 came out)
UltraScript (postscript printer for Atart SLM804) 25
PageStream 2.16b (or whatever) 100
Laser C 50
Really a GARGANTUAN amount of software that I wont waste
bandwidth for.. 1-50
Games:
(40+) 1-10
LOTS of games... some good ones (PopulousII), some lousy ones
for very reasonable prices... i dont want to have to
throw them away...
Mags: piles of stupid magazines and 50+ disks from magazines etc..
Disks: 100+ random disks of stuff (who knows whats on it)

Big Price: 1200 + shipping
for everything atari that I own. or 1300 with shipping

Everything, of course, is Best Offer also and I would
be happy to break up bits and pieces of it

I have used this system extensively and have had great success with
it in producing flyers, adverts, my thesis, programming, games, and
this system still beats all Windows software i have tried in speed by 2X,
capabilities by 2X, and ease of use by 5X.

All software listed has original disks and docs and many have the original boxes (including games)...

Cross-posted to: uw.sys.atari,comp.sys.atari.st,comp.sys.atari.8bit,ont.micro,kw.micro

In October, the Kitchener-Waterloo Eight Sixteen Thirty-two (KWEST)
Atari user group will have a general meeting.

Our 16-bit library currently has over 400 disks of public domain
and shareware software.
In addition, there will be our updated catalog disk and our
disk-of-the-month.
Our 8-bit library is also available.

As well our own newsletter "The Hard Copy" will be given to attendees.

The group welcomes new members and visitors with
8-bits, 16-bits, or those just curious.

Meetings held at the University of Waterloo in the
Math & Computer Building.

Room opens at 7:00 pm. Meeting starts at 7:30 pm.

Wednesday, October 13, 1993
DCS Course Room, Room 2009 (2nd floor)

Call 725-2068 for more information.

Hope to see you there,
Dani Roloson

I would also like to suggest ST Informer Magazine. Their number
is (503) 476-0071. It is a great magazine with ads from quite
a few mail order houses. ST Informer sent me a sample copy;
I'm sure they'd send more. Both Current Notes and ST Informer
are worth it!

I get both also. ST Informer's is particularly good at giving a lot of
screen shots and showing a GEM menu bar summary of reviewed applications. I
have always disliked reviews that ran on for pages without a single graphic
detailing the on screen behaviour of an application.

Both magazines have pretty complete reviews of products.

You got it, Kendall. I've got other things I'd rather do with my time than play tit-for-tat with BobR, who is (admittedly) one of the more... "interesting" personalities in the Atari community. But he's got more energy and time than I do; where's Len Stys when you really need him? B-)

736. DSP difficulties with Falcon...

Newsgroup: comp.sys.atari.st
Date: 1993-10-13 02:42:00 UTC
From: jon.brenda@outlan.ersys.edmonton.ab.ca
Message-ID: <22572.79.uupcb@outlan.ersys.edmonton.ab.ca>
Source record: 199416

Your problems with the DSP-using programmes might stem from the DSP already being in use. Are you running something in the background with MTOS that might be using it? Also, if you're using MTOS or not, and you install Audio Fun Machine, it has the option of leaving its code active in the DSP's memory. Try booting the machine clean, and give it another shot. I'd also be suspicious of perhaps a buggy P.D. product. Is there one using the DSP, like one of those nifty graphics demos, that you may have run before encoutering problems?

Jon

Hold down the [Control] key when booting to avoid touching the hard disk. Or maybe it's the [Alternate] key. Try 'em both, I know I got Dungeon Master to work on my Falcon. (But I'm not much for games, so I only tried it once.)

740. BinkleyTerm ST 3.10

Newsgroup: comp.sys.atari.st
Date: 1993-10-13 05:07:20 UTC
From: asmith@zero.cypher.com
Message-ID: <1993Oct13.050720.6936@nuchat.sccsi.com>
Source record: 199517

Can someone please help me with a question about BinkleyTerm ST 3.10? I'm trying to set up Binkley with my BBS but would like to set it up slightly differently from standard. Rather than have Binkley load up the BBS when necessary, I'd like the BBS to load Binkley after a carrier is established.

The actual process of loading Bink at that point is no problem. But my question is is there any way to get Bink to respond to a carrier ALREADY present and spit out the standard "Welcome to..." stuff?

Thanks a lot!

Maybe they neglected Norway because in Sweden they had full page adverts in Expressen (biggest evening paper), Kalle Anka (biggest comics), Svenska Hemdator Nytt etc. This stopped completely when Atari closed down.

> Atari makes GREAT machine (thank you guys) but they do TERRIBLE
> marketing. Think about what they COULD have sold of ST's !!!!

Just had a peek at the prices today...

A1200/80MB - 7495 SEK
F030/80MB - 14995 SEK

Guess what sells!

745. ATARI UNITED! DiskMagazine

Newsgroup: comp.sys.atari.st
Date: 1993-10-13 07:47:48 UTC
From: Gordie Meyer ATARI UNITED cofounder <BIBLINSKI@delphi.com>
Message-ID: <931013.10068.BIBLINSKI@delphi.com>
Source record: 199520

For immediate release:

Mountain View, California--September 29, 1993--ATARI UNITED! announced that the first regular issue of its DiskMagazine will be released in mid-October, 1993. A special preliminary issue of the DiskMagazine was released through STeve's Software at the Glendale Atari Show in September. The magazine will contain news, reviews, press releases, program demos, public domain software and any other information that might be of interest to owners of Atari TOS computers. The floppy-disk based magazine features an interface developed by Bryan Edewaard and Scott Ettinger. The reader is compatible with any version of TOS, from the original STs to the Falxon030 of today and is readable in any resolution with at least an eighty column display.

Gordie Meyer, managing editor of the ATARI UNITED! DiskMagazine, expects the contents to cover a wide range of topics that most users in the Atari community will find beneficial. While a small part of the community is active online, and gets word of new or improved products almost immediately, most Atarians often get that information weeks or months after it first appears, if at all. The AU! DiskMagazine is an attempt at bridging that informational gap. The DiskMagazine will strive to be a source of solid information and support that the average user needs. It will also focus on providing support of user groups, with a regualr "showcase" column featuring various user groups through out the United States. In addition, ATARI UNITED! is offering blanket permission to user groups to reprint or reproduce any or all contents of the DiskMagazine unless specifically noted otherwise. This will aid the user groups in putting together newsletters and disks of the month.

ATARI UNITED! is seeking advertisers for the DiskMagazine, to keep the cost of obtaining the DiskMagazine at a minimum. Anyone interested in advertising in/on the DiskMagazine should contact Gordie Meyer at one of his addresses listed below. ATARI UNITED! is also looking for volunteer writers, and also welcomes the submission of any press releases related to the Atari TOS computer.

ATARI UNITED! DiskMagazine is available for individual subscription at $16.00 a year. (4 issues a year, published quarterly). Individual issues may be purchased at $4.95 by contacting Gordie Meyer. User groups that would like to subscribe at a special rate should contact Gordie Meyer at the address

listed below.

For information regarding the DiskMagazine or to subscribe to the magazine, please contact:

ATARI UNITED! DiskMagazine

LACOM is out of business.

> is there a way to figure out if the disk itself is in order?)

Certainly, by hooking it up to another host adapter (ask a friend)
and try it. You can also try to access the hard disk using
low-level hard disk software (such as SED) to find out if
you're just having a kind of installation/harddisk software
problem.

Hi,
there are some different ways to set up Binkleyterm:
If Binkley is loaded with carrier present Bink will try to establish an EMSI
or other mailer connect. In this mode no "Welcome ..." stuff is sended out.
On the other hand, (Binkley is front end) the "Welcome ..." stuff is presented
and on non-mailer-connects binkley drops back to your BBS-prog.

Bye Wolfgang

752. Re: Installing GCC 2.4.4

Message-ID: <1993Oct13.102743.19253@unix.brighton.ac.uk>
Source record: 199527

I know exactly what you mean. Gcc seems great, but a little difficult to get to grips with. I could not get the things running for ages and then when I did I gave up because I could not get any docs on the libraries.

I wanted to write accs and could not work out how to bind the acc startup code (of it exists). I also had loads of programs written with GEMfast and I wanted to update these to GCC but it uses the traditional gem calls so I would have had to change *alot* of code.

I think that someone should write an installer and docs for this (probably) excellent system.

I think you need to set up some environment variables -

GCCEXEC - BINARIES
GNULIB - LIBS
GNUINCLUDE - INCLUDES

If thats not right, change the GCC and GNU prefixes around. ie. GNUEXEC, GCCLIB, GCCINCLUDE. I am sure its one of the two. I trust you have all the utils gcc-as, etc as you will need these to compile anything.

>Nuff plug'n'play? :-)

No! Of course this should go in the MultiTOS setup/install program.
There a small dialog should allow installing/setting/changing the SCSI
ID and drive letter for the CDROM. Even better would be if the program
would firgure out what drives are CD ROM drives by itself and assume a
logical default as drive letter.

How is that for plug and play? ;-)

Erlend.

```
hello,
I've got one hard disk for atari ST/TT for sale.
It is:
-made by SUPRA
-has a seagate drive (scsi)
-48Mb formatted, no bad sectors at all
-seagate is 2 years old
-has an internal battery-backup clock and a prg that
reads' the curent time into TOS when booted.
-works with 110-120V. or 220-250V. (USA&Europe)
- _FULL of SOFTWARE_
-and SUPRA's & ATARI's driver software
- It has a SCSI interface so you can hook up to 8 or 9
devices on the same interface...such as: cd_rom,
another HD-drive, disk drive, scanner etc...

Im selling for the highest offerer, so here's your chance... !

hutch@bellman.lanl.gov (John Hutchinson) writes:

>Just FYI, I installed a 66DX2 processor in my 486 last night and ran Ofir's
>GEMBench speed rating utility and pulled 503% cpu speed as compared to a
>standard ST. And this is on a relatively mild 486 ISA bus, not a local bus.
>Of course, your mileage may differ... :)

John, BUSSES have nothing to do with the emulated CPU speed. GEMulator
does not need to access any of the hardware on cards when GEMbench does
its CPU speed testing. And of course the cache is big enough on a 66DX2
to have the testing bit in it I think, so the results are not realistic.
But of course you admit that by saying you mileage may differ :-)

757. Problems with PoV 2.0

Newsgroup: comp.sys.atari.st
Date: 1993-10-13 11:19:34 UTC
From: jdmt@dcs.ed.ac.uk
Message-ID: <CEu24M.KwB@dcs.ed.ac.uk>
Source record: 199531

Hi there,
I have recently downloaded the Persistance of Vision 2.x
sources and compiled them on my TT. While the compilation went O.K. , I am
having a great deal of trouble actually getting any raytracing done. I have been
able to trace a few simple pictures e.g. scenes/level1/simple.pov, but most of
the scenes in the level3 folder die mid-trace - usually with a bus error. I have
also had a lot of underflow warnings, which suprises me as I am using the FPU, and
so therefore have at least 53 bits of precision. Has anyone else had any similar
problems?

I compiled the source, using the Unix machine config. stuff - gccconf.h
and gcc.c and I have tried compiling with gcc-2.3.3 and gcc-2.4.5 , mintlibs 30
and 36, but I still get the same errors.

I really hope someone out there can help,
Thanks in advance,
Cheers,
Joe

P.S. My system is: TT 2MB ST RAM , 8MB TT RAM,gcc-2.4.5 , mintlib 36,mint 1.08,
mfs60.6 and I used the compilation options -m68020 -m68881 -O2 and
-fomit-frame-pointer, I am NOT linking with the pml as I am using the FPU,
and I have set the load bits of the binaries to 7 (fast load,allocate and
load to TT RAM).

758. Spectre + ARA ? Does it work?

Newsgroup: comp.sys.atari.st
Date: 1993-10-13 11:55:31 UTC

Hi atarinetters

I'm thinking about buying a modem (probably USR Sportster). My question is if I will be able to use ARA (Appletalk Remote Access) under Spectre GCR.

PS. does the sportster have 'silent answer' (ie. no phone ringing when data or fax is comming in) ?

Thanks, Edward

759. Papyrus junior?

And for those of us Atari users that like to get the fastest 3D graphics from our machines? I'd like to see a classic like Elite written in COBOL (!) Not everyone uses their Atari for applications etc. I mostly use my STE for demos/PD games. Have you seen UTOPUS (by Chronicle of Finland) running on a 2 meg STE. The Falcon version should be amazing in True Colour (yes I'm from the UK) and with 16 bit DSP sound....

I know I've detracted from the subject but thats life ...

Simon

Source record: 199543

Somehow, I think my experience might be germane to this discussion. I have a Falcon 030/14 and a '486/33 clone sitting about 6 ft apart. I play nethack a lot on the clone (sometimes Windows solitaire). I play with the UNIX-like development environment and do bbs-ing/internet surfing on the Falcon. The clone has a NEC CD/ROM on it...took a couple hours to get basically working, but 2 weeks (and a replacement driver) to get all the features. I use the CD/ROM for both machines by copying stuff I need to floppy (I'm into source collections, clipart fonts and ..ahem..'artistic photographs', not Carmen Santiago and third-rate encyclopedias). I enjoy programming on the Atari box; I HATE HATE HATE programming for Windows on the clone (Visual C++ made things worse).

So for similar amounts of money, I get more play value out of the Falcon, but having both multiplies the value. Even though the Falcon only needs 1 cable to connect to the CD/ROM, I haven't seen any need to connect them yet.

Steve

763. My 1040ST won't go!

Newsgroup: comp.sys.atari.st
Date: 1993-10-13 14:49:10 UTC
From: ford@esvax.dnet.dupont.com
Message-ID: <ford-131093104005@fordt.es.dupont.com>
Source record: 199539

I bought a used 1040ST a few years ago, and after working fine for 6 months or so, it quit. Symptom: the power light comes on but nothing works. If a boot disk is in the internal floppy, it never even tries to access it. So, I suspected the drive. I tried connecting an external drive, No luck, even if the internal drive was disconnected. I also tried borrowing another internal floppy drive from a friend, put it in and still no fix. I had heard that Power supplies for the 1040 were a little flaky, so I suspected that. Recently, I bought another (used) and put it in. Still no luck.

Unfortunately, there are no Atari shops around here (Delaware), so I have no place to go. I admit I am a little unmotivated, cause it was a second machine (I have a 520ST also), so I haven't worked REAL hard on the problem, and I'm probably not willing to spend a lot trying to get the 1040 going.

I was just hoping somebody out there had had the same exact problem and could give me ideas. Also, if you want the machine as is for spare parts, make an offer.

|>Notator Logic dongle does?
|>
|>Erlend.
|>

This Annius Groenink seems to enjoy making a fool of himself and advertising his disrespect for copyright laws all over the network.

As pointed out in a review of Cubase Score for the Mac in the latest Sound on Sound, the ultra-paranoid copy protection employed by most top end music software suppliers is mainly due to the hordes who think they are real cool coz they've got a cracked CuBase or whatever. The review also points out that Cubase Score appears to incompatible with Notator Logic (mac versions here, I gues something like export allows you to share dongles on Atari) because both have apple destop interface dongles.

I do not LIKE to have to cart my dongle everywhere to run Notator. Until recently I was commuting quite heavily between here and Hamburg, and god was I pissed off the time I forgot my Notator dongle. Its idiots like u

One further point to Annius etc. Envisage this. You get a record deal and take your song files generated with your cracked Cubase to a studio that is running the latest CuBase, which somehow manages to detect the song has been processed with an illegal copy and consequently trashes you floppy disk. I'm not saying this IS possible but if I was the author of such a package I'd be seriously looking at such possibilities. And I guess given your stated diregard for data integrity you'd probably not have a backup either. haha

There are plenty of adequate PD and low cost sequencers around. They may not be as good or reliable as top end ones but then u gets what u pay for.

Magnus Thylander (magnus.thylander@p4.troed.ct.se) wrote:
> Forgive me for asking such a stupid question, but what is Unix Windows?

Unix Windows is an ancestor of MacLayers, which is a program that allows one to have multiple terminal sessions simultaneously over a single serial line (each in their own window).

That is, you log in from a single terminal window (as with any modem program), execute a magic UNIX command, and at that point can open up more terminal windows. I/O from/to the windows will be multiplexed over the single modem connection. So, you can have two or three terminal windows (each in their own GEM window) going at the same time. This is very handy if you are going to use the resources of more than one machine (you can have a window open to each one).

There are at least two Unix Windows implementations for the ST, both of which have small problems. A rock-solid implementation of UW incorporated into Connect would be great! If it is done, PLEASE include vt100 support (the standard ADM-31 emulation leaves much to be desired).

> Unfortunately uw does support no vt100. This is one of the reasons why
> I personally see no advantage for implementing it in CoNnect...

True, but there is no reason why it could not. In fact, I think newer versions of this program (MacLayers) do support vt100 (not sure). If so, this implies that the vt100 support needed for the UNIX end is already there. Only the ST end would need to be rewritten, which would be needed anyway for implementation in Connect.

Even if vt100 specifically were not available, any terminal emulation that provides an equivalent number of textual effects (and appears in standard UNIX termcap files) would do. Vt100 would be nice simply because Connect already supports it. There may be a more advanced ADM emulation that provides enough to make it worthwhile.

Just my $0.02.

Could be something as simple as this... Try opening it up and removing and replacing all the socketed chips (TOS, GLUE, BLiTTER (if present), etc). Sometimes they like to work themselves out a bit. I had an old 520 with the same problem and a chip reseat fixed it all.

778. GEM Programming with GCC

Newsgroup: comp.sys.atari.st
Date: 1993-10-13 20:40:21 UTC
From: bgilbert@cs.washington.edu
Message-ID: <1993Oct13.204021.2186@beaver.cs.washington.edu>
Source record: 199549

Thanks to everyone who responded to my post about GCC on my Falcon030. The main problem was I was using the wrong types for all the GEM functions -- I though I had to use 16-bit types when the GCC libraries expect ints for these parameters (which are 32-bit by default).

It works beautifully now and I may actually get some programming done! (although GCC is really stressed running under MultiTOS with 4MB of RAM, you have to delete the desktop to compile anything at all!)

Date: 1993-10-13 22:59:22 UTC
From: dlk0ms9s@umiami.ir.miami.edu
Message-ID: <1993Oct13.185922.16060@umiami.ir.miami.edu>
Source record: 199408
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I have an ACER multisync monitor hooked up to my ST and I am having problems with the interface cable. Does anyone know the phone number that I can call to get a new cable?

Thanks
Mark Santora

782. Falcon'030 system w/software for sale!

Newsgroup: comp.sys.atari.st
Date: 1993-10-13 23:04:28 UTC
From: oracle@iastate.edu
Message-ID: <oracle.750553468@pv0a27.vincent.iastate.edu>
Source record: 199406

Greetings all...

Unfortunatly, the outrageous price of getting an education is forcing me to
-perhaps- part with some of my toys.

I would like to sell the following package if I get a reasonable offer for
it.

Atari Falcon'030 4 Meg Ram/80meg IDE internal --- $1299
includes MultiTOS, SpeedoGDOS, AtariWorks,
System Audio Manager, Falcon D2D, etc.

System is about 3 months old and is still
covered under the original factory warranty.

External SCSI II <-> SCSI cable (three drive) --- $50
Lattice C 5.5 --- $200
Musicom --- $40
WP6.0 Speedo Font Pack (50 NICE Fonts) --- $25

Microphones and various audio cables. --- $60

(what I paid) Total--- $1674

The computer and all software comes with manuals and it's original
packaging. Both the VGA and RGB monitor ADAPTORS are included with
the system. And of course the hard drive will come loaded with the
latest Falcon PD software (Demos, 16bit Mod Players/Editors, etc).

If you are interested in the system, please make me an offer. I am not
desperate to sell so serious offers only please. Also, I am not interested in
breaking up the package.

mail replies to oracle@iastate.edu

Hello fellow netters, I am owner of an Atari Falcon030.
I wish to program it in C, C++, and assembly language.
What I am particularly interested in are;

1) An assembler for the 56001
2) An 030 optimized assembler
3) A very good commercial or shareware c package
4) Sources for books in the new york area...
5) Tips on running the ftpable dsp assemblers

thanks

Mr. Amalaye Oyake

Are you SURE? jeffmay@magnus.acs.ohio-state.edu (Jeff A May II) posted
"49 seconds" for his TT!

I was therefore expecting 1 minute 40 seconds for a 16MHz Falcon.

Is the TT really so slow?

>>windows as I want, etc.).

WINX does more than just add more windows! (In fact, I don't use it
for that purpose). It also:

1. Allows you top real-time-drag all windows.
2. Allows you top real-time-resize all windows.
3. Backgrounded windows still have gadgets (is this true for MTOS?)
- windows can be dragged and resized without bringing to front.
4. Fixes scroll-bar bugs (are they in MTOS?)

>because of a mouse - . It lasts 5 minutes, takes 5Mb, and is played at 8.5 fps
>!!! In a 160x120 window, in True Color mode.

May I ask what machine this was running on? Also, is it just me or
does anyone else have a hard time understanding why 160x120x15bitx8.5fps is
particularly amazing? I know that I've seen plenty of Quicktime movies at
around that size, in 24bit, doing 20-30 fps. And that was just the "way cool
experience" on their promo CDs on a MacIIci. Was this done on an ST? I
hope so....

>I tell you it's incredible. BUT,
>you're not about to see any software using it, since NOBODY has bought their
>licence (for whose interested, it costs 300000 FF, which is nearly $58000).
>Too bad, when you see what it gives you.

Ok, assuming that it works really well, why should it be worth 58k?
Do they think that profit margins on a game (or games for that matter)
using this technology will be high enough to sink 58k into just licensing
the code that adds what would amount to "window dressing" ? If the game
isn't released on CD, do they think that anyone might be able to make
significant use of this technology such that 58k would be reasonable? (ie:
make a game where the MPEG is an integral part of the software, such as
"Out of This World").

>I can't help thinking about the games with cinematic sequences that should be
>released then on our great machine. So, the solution is simple : if you want
>games with MPEG cinematic sequences, PRAY...or PAY !!!

They would be nice, but that would fall under my "window dressing"
catagory as the MPEG would not be a neccessary part of the game, just a way to
save a MB or two for sequence animations.

>Unfortunately uw does support no vt100. This is one of the reasons why
>I personally see no advantage for implementing it in CoNnect...

I have messed around a little with the UW source, and if I recall correctly, the terminal emulation is entirely separated from the UW protocol. I believe that you would need to implement only the protocol, using the vtXXX emulation routines already in CoNnect. The unix server (for the MAC) can already handle vtXXX and tektronics I believe.

To me, UW support sounds like a good enticement for registered users only. It would be great to have a zmodem download going in one window while you work (or read news :-) in another. Unfortunately, I can't get zmodem to work with CoNnect (I get lots of timeouts, like someone else reported), so I don't use it.

> of the time)

Well, it (the DSP) *is* after all a special-purpose processor. An FPU is also next to useless most of the time. (Think about it... No matter how compute-intensive your task, probably 95% of your code only uses integer and control logic...) The Falcon is still a ground-breaking machine, and a lot of folks are using it as such. Even though the NeXT was the first system to use an integrated DSP, almost nobody developed any NeXT apps to take advantage of it. In contrast, there are a large number of folks working on DSP-intensive applications on Falcons. The Apple market looks to be greeting DSPs with about as much enthusiasm as the NeXT's. From my viewpoint, it seems to me that the NeXT and Apple communities just aren't as intense with pound-the-metal, push-the-envelope hackers as the Atari community.

Any system can only be as useful as the user wishes it to be. If you aren't imaginative enough to find a use for a 16 MIPS processor, whose fault is that? The computer's? (That's a generic "you" by the way... Yes, it would've been great if the 56001 was a magic bullet that automatically accelerated everything you could possibly want to do, without you having to lift a finger, but so it goes... Few worthwhile things are easy, eh?)

> d) pathetic documentation
> e) pathetic ergonomics (I'm surprised I don't have carpal tunnel
> syndrome from this keyboard yet)
> f) etc, etc

No arguments on the rest of your points. I think it's a shame, but at this point Atari has got their hands full with the Jaguar, so things aren't likely to change much in the ST arena in the next year or so. But if the Jaguar takes off, I'm sure there will be interesting Falcon-followons soon thereafter.

At least Atari is finally going to start putting out a decent, comprehensive developers' doc set. (Sounded like possibly a collaboration with the SDS folks, tho may just be repackaging anything that's not covered in the Compendium...)

Motif is also a library, a Look And Feel, a non-dairy coffee creamer, and
a spackling paste. (Ooops, sorry, got a bit carried away there...)
>
>Full source for X11R5 is available if you feel like starting a port! :-)

Full source for X has pretty much always been available. There was an ST
port of X10 hiding out with the Lachmann guys way back in 1987. (The same
folks who brought you the revamped UnixWindows client for the ST. As I
recall, they weren't able to release it because it used an unlicensed Unix
kernel port as the base. Too bad...) X could be ported to MiNT today, but
without TCP/IP networking support. (In which case, why bother, really?)
X doesn't need Unix to run; it also runs on VMS, which not only doesn't have
BSD Unix sockets, it isn't even remotely like Unix...

Of course, you wouldn't want to run with less than 4MB of RAM. (But you
could be productive in that 4 meg. Even a Sun 3/50 (4 MB RAM, 12.5 MHz 68020)
could run X10, after all. (Of course, it had the benefit of virtual memory...)

I do agree though, X would be darn annoying at only 640x400 resolution. It
would probably also be pretty annoying with only an 8 MHz 68000. Despite all
that, you could turn an ST into a functional X-terminal... (ala NCD.
A box with no local "operating system," just an X server and a network
connection.) (Probably the equivalent of what the Lachmann folks did.)

Before you go and port X11R5, though, I suggest you first:
establish a standard data type to eliminate the 16/32 bit int
ambiguity
build a shared library system that uses your new, unambiguous "int"
build an IP kernel ... "" ... ""

Supporting any selection of X11 clients gets really impractical without
shared libraries. If we could forget that 68000s ever existed, the problem
would simplify tremendously. The fact that we need to worry about supporting
old STs severely hampers this sort of effort. (No virtual memory, and big
performance hit when using 32 bit ints...)

I suppose we could take a lesson from the PC and Mac world, where just about all new software requires a 386 or 486 plus gobs of expanded RAM, or requires a 68030 and System 7.x, etc... Unfortunately, while just about nobody in the PC world is still using an 8088-based PC, probably 90% of the Atari market is still using a 68000-based ST. sigh...

Would you buy a 68030-based Atari machine, if it meant you could then run X on it? (With the added qualification, that it would *not* run on your 68000 machine?)

I haven't used Mdisk in a long time, don't know. I guess it would be useful
for the purpose you list, I may have to look it up again.

> 2. Is there a problem with using DD floppies in the HD drive and can
> these floppies be read in a DD drive (i.e. I will still have an ST
> in use and want to be able to swap disks between the two)?

Double-density floppies work fine in the Falcon drive. I've had no trouble
swapping disks with my STe or Mega.

> 3. Can I get medium and low res on the mono monitor now? I know you
> can get high res (interlaced...ugly) on the color monitor.

No. The mono monitor is only driven at 640x400, monochrome. Mebbe screenblaster
will let you use other resolutions, mebbe you can get grayscale, but the
built-in support only does ST-high on an SM124...

> 4. Can the D2D software be run under MTOS together with a MIDI
> sequencer or is this expecting too much?

Hm, my sequencers (Dr. T's Omega, Cubase 3.02) don't like MiNT, so I'd guess
the answer is no.

> 5. I have only heard the D2D output over cheap speakers, is it really
> squeaky clean (i.e. no hums, buzzes, etc.)?

The Falcon audio system is very clean in itself. If you connect good quality
components, you'll get good results. If you use cheap stuff (like me with my
cheesy Radio Shack stereo mixers... sigh) you could see degraded results. (If
you're not careful with a complex setup [I have 2 sets of mixers, several
keyboard and mic inputs, receiver in & out, etc.] you can cause a ground loop
which will introduce hum on various lines. Big drag, but a common danger in
any audio setup, not just specific to a Falcon.)

> 6. Does the VKiller virus protection software run OK on the Falcon?

Dunno, haven't bothered to run it. I figure documentation is so scarce that
no one will figure out how to write a Falcon virus before I move on to the
next platform... And in the meantime, any existing ST viruses probably won't
survive in the unfamiliar Falcon environment... }-)

]> programming language!

]And for those of us Atari users that like to get the fastest 3D graphics
]from our machines? I'd like to see a classic like Elite written in COBOL (!)

Reading seems to be difficult. However, what I meant is that a proper
application should be writtenm in a high level language which fits the
problem. COBOL thus might be fine for bookkeeping. C++ might fit
when you have complicated 3D graphics.

And when your application is finished, you should replace the time
critical parts of your application with fine tuned versions -- ultimately
assembly. But typically will those time critical parts take only 10%
of your complete code -- so only 10% needs to be redone.

You might try STereo Replay, an 8 bit stereo sampling system. Decent quality,
samples up to 48 khz. The sample editor is also pretty complete, I like it (for
the most part...) If anyone out there is selling an ADAP you could go for that
for 16 bit stereo. Or you could buy a Falcon...

>Secondly, I hear the Falcon has a DSP chip, which produces CD quality or better

>'banks' so I can have more than one sample in the computer at once, but play
>them at the same time.

The sound system doesn't really rely on the DSP chip, although you can use it
to add effects to your sounds... The built in hardware has 16 bit stereo
A-D/D-A converters, and the DSP port will allow you to use up to 4 stereo
channels. (They say "8 channel audio" but since the stereo channels are not
fully independent, it's easier to refer to it as 4 stereo channels...) The
sampling is pretty flexible and very good quality, probably more than folks
can reasonably discern. Yes to MIDI. If sound/music is your game, the Falcon
is the best to play it... With programs like Cubase Audio, you'll have total
MIDI control of your sample playback. I still find myself oooing and ahhhing
over the stuff Cubase 3 lets me do, I'm so blown away by these new packages...

799. AHDI 6.06: UNIT 0 - Identification unavailable

Newsgroup: comp.sys.atari.st
Date: 1993-10-14 09:16:49 UTC
From: s_hatz@iraul1.ira.uka.de
Message-ID: <29j5e1INNbth@iraun1.ira.uka.de>
Source record: 199429

Hi there!
I just downloaded AHDI 6.06 from atari.archive.umich.edu and then
replaced my old SHDRIVER.SYS with the one I found there. When
booting I now get:

```
Loading...
------------
ATARI HARD DISK DRIVER
AHDI 6.06 JUNE. 2 1993
------------
ACSI devices
UNIT0 - Identification unavailable
UNIT1 - Not responding
------------
BOOTLOADED
```

It takes about 20 seconds until the "Identification unavailable"
appears, but then everything works (or just seems to work) fine.
Does anybody know what's going on?

I'm using a MEGA2 with TOS 1.2 (22.4.87) and a SH205.

Any help will be greatly appreciated!

Alex

>only my opinion, of course :-)

(Also already registered... }-) While I love screen, and use it and Connect
for at least 4 hours a day every day, I would still prefer a system that lets
me position separate windows, instead of being forced to toggle back and
forth all the time. Meanwhile, I'd say, since the UW server is so much simpler
than the screen program, I don't know why you find it harder to build on other
systems. Of course, much more work has gone into making screen run on many
platforms, so that could explain it...

It would probably take less effort to add the UW functionality to Connect than
it would to add Connect's functionality to the current UW client!

801. Atari Unix

Newsgroup: comp.sys.atari.st
Date: 1993-10-14 09:21:36 UTC
From: root@status.gen.nz
Message-ID: <693286.33696.15145@status.gen.nz>
Source record: 199462
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Greetings People,

Long time since I posted a message in here (grin) but I have moved off
to the world of unix and the joys of BSD.

Having said this I am now looking for unix for the TT or Falcon. If such
a beast exists I would love to hear about it. We want to set up several
of the machines here.

Can you tell me ....

o Is it SYSV, if so what Revision? (sysVr4 ? or BSDish)
o Does it have the Inet Sockets ?
o What is the sys size?
o Does it come with sources and bin's ?
o Is there a FTP'able PD version at all ?
o What is supply from Atari like if a commercial version exists?
o Dave, if you are on the Well reading this what version did you
used to use? A sysV from memory.

Thanks in advance

Jon Clarke
Z*NET Pacific (well not any more)

I recall this as well; there was a command to switch to and from tektronics
mode, but nothing preventing you from adding additional emulations. Note that
there were also at least 2 different freely available UW server implementations
and that the earlier one did *not* support multiple terminal emulations.

The built-in Zmodem works great for me, even with the auto-start.

I'm not sure you can encapsulate Zmodem in the UW protocol. Of course, it was
done for Kermit, so maybe it's possible. It would interfere with your news
reading though... (Think about it - sending data from two sources, in the same
direction, down your poor little modem's throat. Now, if you were *uploading*
on one side, and reading news on the other, the contention would be pretty
minimal...)

One program that works very well with ide and scsi drives is the good
old CACHEXXX.PRG from ATARI. While TCACHE makes some problems sometimes,
CACHE.PRG works 100% reliable.

Hm, sounds like you want some GNU software. GCC, G++, and GAS.

> What I am particularly interested in are;

>1) An assembler for the 56001
>2) An 030 optimized assembler
>3) A very good commercial or shareware c package

I presume by "030 optimized assembler" you mean an assembler that itself was compiled for 68030 and so runs faster than it would if compiled for 68000. I know of no assemblers that do any real "optimization," other than converting jumps to their short branch form when possible. At any rate, the GNU assembler has full support for the entire 68xxx processor line, so it should fill the bill. There is also a version of GCC written for the DSP56001, so you can do everything you want in a coherent GNU environment.

>4) Sources for books in the new york area...

Haven't got a clue. Waldenbooks? B. Daltons?

>5) Tips on running the ftpable dsp assemblers

No help from me, just yet, I'm still muddling around m'self...

It is possible to send mail into the MausNet or FidoNet. I don't know
the address structure for Fido, but I can help you with the MausNet.
My own address there is:

Claus_Brod@bb.maus.de

User names in the MausNet are real names such as above, no pseudos
or acronyms. The first part of the machine address is the ID
of the Maus BBS that you want to contact ('bb' stands for
'Boeblingen', for example, 'm' for 'Munich' etc.). The
suffix 'maus.de' remains the same for all Maus BBS's. Note
that there is a size limit for PMs into the MausNet. (I think
it's something like 16 KB in the moment.) If your messages
exceed this size, the receiver will have to pay a penalty.

This only works for games which use the boot sector. The control and/or alternate keys only skip boot sectors; I never managed to actually get my TT read the AUTO folder and accessories of a floppy. (BTW: does anyone know whether this is possible at all?)

Its ALTERNATE and you hold it down when you see the Atari Logo.

If you are autobooting games, you might like to look at Magi or (better still) backward for running any ST games. Or anything ST like which does not want to run. I got Write-On running thanks to Backward. (Its runs, but crashes when you try to print otherwise).

It works, but only when cold booting. You have to get the right
moment, it's a bit tricky, the desktop has also some magic in using
the [Control] key.

What do you mean by Cubase Score and Notator Logic being incompatible? Of course they don`t read each others files (they never did), but there are absolutely no problems in running both programs on the same machine - both of course with hook on dongles - we do it all the time, even simoultaneously. (However, the Apple MIDI Manager is absolutely useless, and therefore it is NOT possible to make the to programs share the same MIDI-data, that hasn`t got anything to do with the programs though).

...
cut out

I know Jani Pentinnen left Chronicle but seen as it states on my software it
is produced by Chronicle thats why I said it. I believe the coding is a
small part to a game of that quality - as there are graphix men and musicians etc.
(Does it mean then that my 6 pounds registration will only goto the coder ...)
The Falcon version will probably be under Agressions name though ...

I know you want assembly code but...
I can send you some examples of C code to do what you need.

It makes sense, to me at least, to perform your window positioning in C,
and pass that information to your assembly language routines that will
acutally redraw the information within that window.

Email me if you want this code.

No, I want you to port the Portable Math Library to use DSP code so I
can compile POV-Ray 2.0 and simply _link_in_ the DSP math routines.

What do you have that uses the DSP as a math co-processor? How
accurate is it? You can't take the same sorts of short-cuts in
ray-tracing that you do in fractal displaying.

This happens when the HD driver tries to determine the ID of a
device that does not support this kind of function. I think that
SCSI devices have a function that makes them send their name,
e.g. "Seagate ST157N" or something like that for the default
internal TT HD. But that doesn't work with the old AHDI hard
disks. But since the ID is not needed by the driver other than
for displaying it at boot time, a device that cannot provide a
name is no problem.

I have recently downloaded from ftp sites various types of compressed
software but I can only explode the .ZIP files using Vincent Pomeys
excellent STZIP program.
I have other un archivers (!) such as DCXtract v2.06 from Double Click but
that won't uncompress other formats correctly like .LZH, .ARC or .ZOO.

Is there a decent, nice GEM interface that will uncompress all my files for
me and at what ftp site is it and is it uncompressed !!!!

Thanks in advance,

SGY

The ATW was sold to the public.

>Great machines IMO ...
Certainly was. A few years ago, Atari had one running some Kodak software with a colour scanner/printer that enabled 35M pictures to be scanned in modified and printed out with no apparant loss of detail.

The onscreen appearance was awesome. Very powerful piece of kit. Atari UK told me last year they still had some and would sell me one if I wanted it :-)

>It takes about 20 seconds until the "Identification unavailable"
>appears, but then everything works (or just seems to work) fine.
>Does anybody know what's going on?

It's unusual that you have to wait that long. You should reconfigure your
AHDI using AHDICONF on ftp.uni-kl.de. This program allows to selectively
choose the drives AHDI checks during the boot process.
All SH and Megafile drives except Megafile 44 can't identify themselves
because they don't support a complete SCSI command set. So it is normal that
AHDI can't identify your SH205.

Hello,

concerning a good Astrology program for the ST I use and recommend HORCOM
by Robert Rettig. It has very precise planetary routines, supports almost
all astrological schools and computes all known planets - existing
as well as hypothetical planets.

You can get it at: Bruno Mahl, Eichwaldstr.17, Lindau am Bodensee, Germany.

He al�so has a program for astrogeographical purposes named ASTROGEOGRAPH.

If you work mainly according to the Hamburg School (Uranian School) you
better get TNP.

Andreas bunka@mibm.ruf.uni-freiburg.de

Well, I didn't care for the MicroTek software, and obtained OmniPage for
the Mac system I use at work; what is "bundled" isn't always very good,
just convenient enough to get you started.

|> I received a newsletter a little while ago and the
|> price was $89 [for the driver]
|>
|> Scott

If the acquired image is in .IMG format (or can be converted), you may
then be able to use MiGraph's OCR (optical character recognition) software
to get text out of the scanned image. And the Migraph OCR software is
certainly more reasonably priced than OmniPage for the Mac.

I suppose Dr. T's may seem archaic now (I've moved on to Cubase) but I was
pretty impressed with it when I was using it. The only reason I switched was
because they had a laughable notation program (QuickScore. What junk...)

Hm... You would have to talk to it like a 68000 talking to an FPU, i.e.,
thru a memory-mapped interface. Also, you would have to convert 32 or 64 bit
floating point into 24 or 48 bit fixed point numbers, thus losing precision.
It might still be doable and useful, but these would be pretty strong
limitations.

Hi!

How long does it take for files to move from the New directory to the Newitems directory? There are quite some (non-accessible) files in the New directory which have been there for quite some time. So what's the policy on this?

Greetings... - Jan -

Not yet, but we'll probably start seeing them when the machine is released.
Remember, it doesn't go "national" until next year. Chances are ATari will
not be spending a lot of advertising money until they've got a lot of
stores ready to sell them!

Mega Depacker has now been replaced by its sequel call New Depacker 1.0.
I'm not sure if it's on any ftp sites yet, but it's even better than
Mega, supporting more formats, and even with a special 68030 version!

Well, I am now the proud owber of a Mega STE (tos 2.05, 50 meg seagate HD).
My question concerns any tos-fixes etc. that I should be using...are there
any??? I know that earlier tos versions often required boot-time progs to run
so as to stop certain problems...do I need any such help for this newer
machine? Any help is appreciated :^)

I have 2 printers, and an A/B switch, and usually boot with printers turned off; I can use the A/B switch to eliminate any potential surges.

To my knowledge, only the Atari laser printer (which used the DMA port) HAD to be on when you booted, and had to remain turned on.

There's something called 2 in 1 which is a GEM shell for LZH, ARC, ZIP,
ZOO and a few more. It's worth trying, even though it's in German.

>"49 seconds" for his TT!

>I was therefore expecting 1 minute 40 seconds for a 16MHz Falcon.

>Is the TT really so slow?

When I bought my TT used, the guy who sold it to me ran some
little *:TOS program that did something for a few seconds, then
displayed the time it took to do its stuff and the time expected
for a correct setup. He explained to me that this program tested
whether a TT was from a series that had a strangely configured
FPU, causing the FPU to run at 16 MHz, and that the fact that the
two figures matched showed that this TT I was going to by does
not have this bug.
I don't know whether that has anything to do with the timings
discussed here, but it would seem plausible to me that a TT with
this bug may not be that much faster on raytracing than a plain
vanilla 16 MHz Falcon.

858. Pinball construction program?

Newsgroup: comp.sys.atari.st
Date: 1993-10-15 01:22:42 UTC
From: swhatley@blkbox.COM
Message-ID: <CEwzu3.36v@NeoSoft.com>
Source record: 199487

Hello,

Does anyone know about a video pinball construction program for the ST?
I had one for my TSR-80 CoCo 2. It was rather lame. I like pinball and
enjoy video pinball games. Any help will be appreciated.

Thanks,
Steven Whatley
Email: swhatley@blkbox.COM

859. QUESTION: DE-COMPRESSING .Z FILES ON ST???

Newsgroup: comp.sys.atari.st
Date: 1993-10-15 01:43:40 UTC
From: hallvart@ifi.uio.no
Message-ID: <1993Oct15.014340.13327@ifi.uio.no>
Source record: 199486

I was wondering if files that are compressed .Z and files that are compressed .zip are the same-
can I use the same de-compressing program for it?
I was wondering because it would be very nice if I could keep the files compressed on the disk that I
bring home, instead of de-compressing it in UNIX first, before I save it to disk (thereby taking a
lot more disk space).
In UNIX I de-compress .Z files by typing `decompress filename.Z` and
also in UNIX; .zip files by typing `unzip filename.zip'.

I use a very handy program for my Atari ST called `DC-sea`. It can compress/decompress a lot of
different files, but I haven`t tried .Z files yet.
I bet it can`t....

Is there an ST program that can de-compress .Z files?

Thanks!

Here's a bit of help... GNU C/C++ works great on my system, and here are
my environment variables:

```
## : We're using GNU C/C++ more these days anyway... ##
setenv GCCEXEC g:\gnu\bin\
setenv GCC_EXEC_PREFIX
setenv GNUEXEC $GCCEXEC
setenv GNULIB "g:\gnu\lib;g:\usr\lib"
setenv GNUINC "g:\gnu\incl;g:\usr\incl"
setenv GCCLIB $GNULIB
setenv GCCINC $GNUINC
setenv GXXINC "g:\gnu\incl++;g:\gnu\incl++\ams;g:\gnu\incl++\gem++"
setenv BISON_SIMPLE g:\gnu\bin\bison.sim
setenv BISON_HAIRY g:\gnu\bin\bison.hai
alias cc gcc
```

Virtual Love Song
By Rob S. Rice

Oh! come with me, my dove, be my Internet love
Let our flow control be RTS.
At eight bits, parity set already to "E"
We can interface with no distress.

Let us not prance like UNIX, our true love is NeXT,
And as intimates we'd not be sorry,
When you confess PROCOMM has left you perplexed
And I told you I use an Atari.

Ah, how happy we'll be, if you should "finger" me,
And my screen would soon inform me that
Even then, late at night, when the lag time is slight
Your DAEMON was primed for a chat.

We'd in bliss F-T-P, typing "l-s dash c"
As the files spilled over our screens.
You'd search through my folders so ecstatically
That we'd both know what "protocol" means.

We would overwhelm all the limits of ELM,
And we'd strain our account sizes' fetters
And I'd GOPHER your sig.files whatever their realm
So I'd know where to "BOUNCE" my love letters.

Let our love be eternal, PROCESSING--please wait!
And our link-up be noise-free meanwhile.
Let no bitter distress, such as from VMS,
Leave me lost in your hateful "kill" file.

For your smile, I'd take risks--I'd not save files to disks!
And I'd yield, whenever the urge
To seek a connection, even _sans_ protection
And hazard the chance of a surge.

Your hours I'd bemuse with my blurbs on the "news"
And regardless if posting got choppy
I would always begin, with "rn" or NEWTIN
Being certain I'd zap you a copy.

I'd swear off my friends, smile when "SESSION ENDS,"
And VERONICA'd be just a dream
You would not find me starchy if you used your ARCHIE,
And my WAIS-line would make your eyes gleam.

I'd send GIF's by the score, JPGs, even more
And I'd soon have our IRC booked.
With the hope, that someday, when you're not far away
You'd not shriek when you'd seen how I looked.

And then we, when we'd wed, with our data line-fed
Would know what two lovers should do.
We'd set up our own node (God knows what we'd encode!)
In a Pentium chip built for two.

Permission to reproduce and distribute is freely granted,
but please maintain original source and authorship--

Funny, that's not what they were telling us on GEnie in the Soft-Logik
RoundTable. Paraphrased, they said PageStream no the Atari would never
be updated.

Of course, they may have decided to stay in the Atari market, though I
can't think of a single reason for announcing that you'd dropped
something, only to pick it up again.

I'd take a TT any day. They're nice machines.

About the only good thing you can say about QuickTime is that it's a
standard. I guess it's nice if you like really small choppy animation.

Makes sense. Since POV-Ray measures only the tracing time, and
this is almost entirely floating point math, the speed of the
FPU would be the determining factor. Does anyone know where I
could obtain this test program (or would anyone mind running a
floating point intensive program that I could compare with)?
Thanks

Nope, 1.04, and I'm not "upgrading" to 2.06 (it's not worth the $$$,
IMHO).

Rumour has it that turning off the width tables will make it MUCH
faster.

Ouch... No, type-1 fonts are outline fonts, just like Speedo fonts or
TrueType or whatever.

I suspect a type-1 engine could be made as fast as a Speedo engine;
they're doing the same sorts of things. If Adobe could speed things up,
they would (and charge some $$$ for a version 2.0 of the Adobe font
engine).

ATM under Spectre wasn't much slower than Speedo on my ST, and I
certainly had more fonts installed.

```
No, they are not the same. *.Z files are Compressed, while *.ZIP files
are ZIPed! There is a version of Compress/Uncompress for the ST though.

Does anybody know if there is an Atari version of SongWrite
available, and how much it costs.

I would be interested in other tools, that are able to process
the SongWrite Format, too.

Thanks!

877. Jaguar: Seen on British TV..

Newsgroup: comp.sys.atari.st
Date: 1993-10-15 08:04:43 UTC
From: steve@earth.ox.ac.uk
Message-ID: <1993Oct15.080443.7736@zaphod.earth.ox.ac.uk>
Source record: 199500

For those people who are interested, the Jaguar was reviewed in the flesh on the ITV childrens computer games program "Bad Influence" yesterday afternoon. I'll attempt to write a transcript of the relevant parts of the program and post it here after the weekend.

It looks like Atari UK have done something right for a change, ie getting a machine on a program which matters. Bad Influence is, IMHO, far better than Gamesmaster and probably holds more sway with the target audience.

The review was long, it included a live demo of a sideways scrolling shoot'em-up and video of early versions of other games including Cybermorph (which didn't look all that great to me) and Alien vs Predator.

Anyway, more details after the weekend.

Steve

There is work ongoing to port 386bsd to the Mac env. (to look for:
on ftp.germany.eu.net:/pub/comp/i386/NetBSD-current you find some material).
Is anybody considering to try to port this stuff to the TT or Falcon?
This should be not too hard, if you have access to the hardware specs.
One has to put in some things from Minix ST (handling of the shared DMA
problem).

I have found that UNITERM V2.0e works on the Falcon (one of the few terms that does), make sure you are running it from ST HI-RES mode (SET THE VIDEO MODE, and make sure you are only using 2 colors), it should work great then.

The Omega Demo will work on my Falcon, but it crashes now and then right where it shows the girl, and most of the graphic effects are lost any ways (at least on my computer), because it seems the top half the screen flickers incredibly, even if I set the system to 8mhz with no caches... Weird...

Buying Atari stock is purely a play on their new game box, the
jaguar. I think Atari is a case study in a poorly managed,
financially troubled company. HOWEVER, the jaguar could keep
them out of bankrupcy court if it sells well. This is their
first *credible* entry into the electronics marketplace since
the Lynx (and that seems to have faded) and they've teamed
up with IBM to save themselves from their infamous shoestring
manufacturing glitches.

Hehe, I bought a few thousand shares the day the IBM announcement
came out. At this rate, the proceeds from selling Atari stock
will pay for a new car and a new unix box.

Champagne wishes,

Chris

Source record: 199359

Somewhere sometime in this group I read a mail from someone
who was trying to compile a list of all the available
Shareware/PD/Freeware for the Atari ST. This list would be
updated regularly and FTPed to the main Atari FTP sites.
The list should contain name/address of the author,
compatibility with different Atari machines, OSs and
resolutions and a short description of the software.
I think it's a great idea, and would like to know if someone
has done/is doing something similar.

I believe the first version 3 release of Nethack (3.x.x?) did work under MonSTEr - this was the only way I could see the full screen properly (although it is a pain to try to play it, and scroll the screen back and forth, but it did work then). I dunno about the latest version or not...

>
>Is there an ST program that can de-compress .Z files?

Of course - I think it's just called "Compress.ttp" or something
like that (available at atari.archive.umich.edu and other sites).
If I recall, you give the parameters of "-d" to set it to uncompress
mode.

You might take note that the latest versions of ZIP, ZOO, ARC, and LZH
create compatible files that can be handled by a unix box, an Atari, or
about any other major system (the fact that ZIP, ZOO (-h) and LZH
compress a lot smaller that Compress may be something to note).

I'm not sure, but I don't think DC-Sea can handle the newest algorithms
of some of these archivers, however...

Hope this helps ya...

I want to set up Gnu C++ on my machine. I have the include, libs
and binary from a.a.u.e but I have a few questions (which are not covered
in anty of the documentation I can find)..

1) Do I also need GNU C, GNU AS and/or the GNU LInker
(figure I'll need the latter two..)

2) What system/environment variables do I need to set??

Any replies via E-mail if possible, as I have no direct access to USENET..

Thanks.
Jon

(If I get G++ up and running, I'll mail the details to the FAQ people. I'm
sure I'm not the only person confused by this...)

898. Z80 cross assembler / dissassembler needed.

Newsgroup: comp.sys.atari.st
Date: 1993-10-15 14:01:00 UTC
From: cybercube.research@canrem.com
Message-ID: <60.38697.4514.0N1867B9@canrem.com>
Source record: 199370

Hi Paul,

we do have an Z80 cross assembler for the ST/TT/Falcon. It offers nested macros, variable symbol length, expressions, include files ... the works, but you'll need an external editor/shell to enter your source code. We've used an editor which allows us to call external progs with parameters to do the job. The dissassembler is for -in house use only-. But you might get around this by (please don't laugh) using one of the ZX Spectrum emulators which (as far as I can recall) had a (very basic) built-in dissassembler...

For more info, please answer in e-mail.

Ralf.

899. WANTED:Write Atari disks on a PC

Newsgroup: comp.sys.atari.st
Date: 1993-10-15 14:09:22 UTC
From: williams@manna-machine.com
Message-ID: <williams.334.750694162@manna-machine.com>

Hello,

I was wodnering if someone could point me toward a shareware\PD pgm that
allows for either writing Atari disks on a PC or reading PC disks on an ST.
Preferrably the former. I saw the pgm "ataridsk" which the description
looked like it would do the former, but the file was bad. My delima is that
I want to give a friend of mine some software that I get via ftp, but I have
a PC and he has 2 Ataris, a STE and a STFM I thinK? ;'>

Any replies appreciated, email or otherwise...

>any??? I know that earlier tos versions often required boot-time progs to run
>so as to stop certain problems...do I need any such help for this newer
>machine? Any help is appreciated :^)

Don't worry about this: the only things that you might see are:
- The wrapping screen bug in Mono: you'll find wrap-fix at a.a.u.e
though I thought it was a hardware bug in the shifter (???)
- The handshaking bug for the serial comm: you'll find serialfix or
something like in a.a.u.e, too.

I heard that there where problems formatting 1.44 Meg DOS-compatible floppies.
For this use Pump Up The Jam (available at a.a.u.e too).

TOS 2.06 fixes all these problems, but the fixes are really little and I
think it's not worth changing ROMS for this. Some dealers will exchange
your TOS 2.05 for a TOS 2.06 for a little price. Other than this, TOS 2.06
has a better boot sequence (HARDWARE/Memory tests as on PCs, but if your
STE works, it will bother you checking your megs of memory each time you
boot up).

Good luck finding these little programms.

Regards
Patrice

903. What is and where to get GEMULATOR

Newsgroup: comp.sys.atari.st
Date: 1993-10-15 14:33:03 UTC
From: robert@harlqn.co.uk
Message-ID: <ROBERT.93Oct15143303@fin.harlqn.co.uk>
Source record: 199255

I'm an ex-ST owner who still reads these groups out of interest. I own a fast PC (needed for work). I've heard mention of the GEMULATOR, which I presume is an ST emulator for the ST. Is it hardware or software ? Where can I get it and how much does it cost ? Any other details welcome.

Rob

> >
> >To me, UW support sounds like a good enticement for registered users
> >only.

This statement is not true by any stretch of the imagination. I responded that I thought the implementation would be great, *if* UW would be free of bugs. I have not tried CONNECT. I have it stored in a directory at school, but it is way to large to store on a single sided, single density, disk (I only have a ss/sd drive), so I haven't bothered to send it home and try it out. If it had UW, I would have another reason to get a decent drive. I love the concept of UW and I used to try to use it all of the time. If it were free of bugs, I would still be using it.

Basically what I am saying is, market the new product as:

BUG FREE UNIX WINDOWS!!!
--also includes CONNECT.

Well, look at the spacejunk demo, it has 6 animations of 5 seconds and uses
nearly 5 MB for those films... In MPEG it would be about 0.5 MB

I have a USR Sportster 14.4 FAX-modem, and just got the STraight FAX 2.0 software. I tried to send a FAX to 3 different remote FAX machines, and was successful for 2 of them, but unsuccessful for the third.
In the case that failed, I got a message "Timed out while waiting for remote to connect", which was disturbing because I know I can FAX to it OK using a regular FAX machine.

Note, you will need STraight FAX version 2.0, since version 1.07 only supports Class 2 modems, and the Sportster is a Class 1.

I think the UNIX end doesn't have to support any terminal types. It just
passes through data from the tty line to the pty (pseudo terminal) and
vice versa. Only the process at the end of the pty has to know the
terminal at the tty side and get the appropriate escape sequences from
termcap.

913. Remote Control of a ST Running TOS programs

Newsgroup: comp.sys.atari.st
Date: 1993-10-15 18:25:00 UTC
From: mike.hill@cccbbs.UUCP
Message-ID: <1957.264.uupcb@cccbbs.UUCP>
Source record: 199277

All,

Im looking for a program that I could set up on a friends system that would allow me to call his system and be able to run TOS programs off his computer and see their output on my screen (remotely) also, I should also be able to interact with these TOS programs running on his system also (it would be great if he had control too, hopefully he can at least see what Im doing).

The reason Im asking this is that my friend is just getting started into programming and he always call me with questions. I would like to be able to call his system and be able to run his compiler shell remotely so I can edit his source remotely (with micro emacs) and call his compiler and fix his code in front of him.

I know Stalker has some ability (uses TOM_SHELL I think) to allow someone to drop to TOM_SHELL and run programs. What I want is something that does this also but doesn't require stalker.

If anyone knows of a program that can redirect a TOS programs input/output over the modem (and hopefully still allow the user at the main system to see whats going on and type too), I would appreciate anyt info on an FTP site.

If replies could be directed to email I would appreciate it also. I can summarize here later for any others interested.

: The Falcon is a
: brand new breed of ATARI, much like the Atari 520ST was back in 1985, now we
: have the new generation of computer systems.

I don't think that is true. The Falcon runs ST software, and I think many
Falcon users buy their Falcons for that very purpose. So a new newsgroup
would be rather counterproductive, IMHO.

Well not being a person that reads all of Genie I can not vouch for what is said there. But I can tell you for a fact that they have not dropped the Atari.

From their Amiga sales dropping the Atari would be tantamount to going out of business.

918. Where can I ftp Powerdos?

Newsgroup: comp.sys.atari.st

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I'm looking for Powerdos at ftp sites, but so far have not found it.
Does anyone know which site and which directory I can find it at?
I'm under the impression that Powerdos is shareware, not commercial,
correct?

Thanks for the help.

-u> character?
-u> --

Yep, cheat! The ghost levels are stored in files BONES.xxx where xxx
is
the level number. Look in the nethack.cnf file for the bones
directory
(usually set up as /nethack/bones/) and delete all the bones
files.

Nice indeed (and indeed implemented in MTOS)

> 4. Fixes scroll-bar bugs (are they in MTOS?)

I think so, works great in WINX though!

I really like WINX, especially the real-time scrolling in GEM windows it adds
to almost all programs (TERRIFIC!), but it would be very nice if it would
function with MTOS since I try to use MTOS as often as possible!

Hello folks!

I have just purchased a Falcon and I must say it is great! (Thanks to all those folks who told me so). However, the snag is that the dealer forgot to pack the VGA adaptor with the Falcon so I am stuck with the TV at the moment.

I would like to find out how I can make an adaptor for myself, and is there any special things to look out for? (I will be calling the dealer, but knowing most dealers, they would take a long time to sort it out)

Also, I would like to connect my ST SCSI drives to the Falcon. What is required? (Can I just get a cable fitted for SCSI-II 50-pin to the SCSI-50 pin?)

Another thing that I discovered is that the DSP connections were not documented. Does anyone know the specs? I would like to build a couple of devices to interface with the DSP.

And yes, Audio Fun Machine is pretty cool...
pin

In article 1993Oct14.182146.1@vaxr.sscl.uwo.ca John Richardson wites:

R>(tos 2.05, 50 meg seagate HD). My question concerns any tos-fixes etc.
R>that I should be using...are there any???

Yes! First there's TOS 2.06
According to this You should get those:

- GEMRAM V1.5 (Get the GEM into the RAM - required for several Patches)
- ARROWFIX V1.4 (Removes the problem with non-scrolling windows of the ACCs)
- WINX V2.1 (2.2?) (Gives you several Goodies, such as
- 40 Windows
- Realtime window-movement
- Non-active windows are editeable (Scrollbars/arrows, Fuller, Closer)
- Alert if a Program uses illegal AES-Calls
- ...

These are made by Martin_Osieka@wi2.maus.de
Next there's a tool to edit the time waiting for the HD to boot up after a cold reset, named
- NOROACH (by Atari themselves)
- An archive called MEGASTE, including several boot-up programs, switching the Cache/16MHz on or off
- SHBUF V1.3(?) to expand the range of the NEWDESK.INF

These are the basic patches I use (except NOROACH)
Certainly You'd like to keep FOLDR100.PRG

Bye

>Atari is worth something... :-)
>
>

Oh, I know they are worth something. I just keep hoping that they will
keep being worth something more and more. :)

Let's face it, Atari's computers aren't exactly world shakers, but their
video games will certainly make them noticed.

Maybe Atari put a new name on their computers next year and start pushing them
with the clout that they get through video games.

STraight FAX v2.00 which is available from Toad in the States. Don't have their details but it's a good program and worth checking out. It also has on-line support. I think it's about 100US$.

From: akisujar@nuscc.nus.sg
Message-ID: <29o1jd$5vh@nuscc.nus.sg>
Source record: 199265

Hello from Singapore,

I need to convert Spectrum 512 pictures into GIF format. So far I can
Convert the picture with suffix .SPC to .GIF without any problem using
SPEC2GIF.PRG. However when I tried to convert the pictures with suffix
SPS the conversion program cannot recognise them.

I think there is a program to convert the picture with .SPS suffix to
SPC but I can't remember it's name.

I would appreciate any info regarding the above or the name of a
program that convert .SPS to .GIF or .JPG directly.
.

938. ==> MEMORY PROBLEMS with ZIP <==

Newsgroup: comp.sys.atari.st
Date: 1993-10-16 10:41:09 UTC
From: polom@pangee.frmug.fr.net
Message-ID: <29oj45$16h@pangee.frmug.fr.net>
Source record: 199269

Hi there...
This i a veru important problem for me !
I have problems with STZIP 2.3... I use a 1040ste but since one month it
really doesnt want to build zip files anymore...telling me I am out of
memory which I know is false... Even if I kill all of my Auto Programs,
which gives me around 800Ko of free memory once STZIP runned, I cannot build
ZIP files.. but I can unpack... I really can't understand as it's worked
pretty well for a long time... I got a new copy of this a month ago but the
problem hasn't gone.. the friend who gave me this new copy has no problems
with it... So ? did any of you have this problem ???
I really hope someone will answer so that I won't kill my STe !
thanx.

Marc.

Source record: 199266

In article <29nf4g$3p4@cxc1.cl.msu.edu>, molin@cxc1.cl.msu.edu (Michael Olin) writes:
|> Does anybody have any suggestions on how to convert .GVW files that
|> were created with GEM View v2.46 (or lower) to the new v2.48 .GVW
|> format?

Convert them to gif and reload them in GVW 2.48
(If they are truecolor convert them to JPEG, gif is only 8 bit wide)

The GVW format is an internal format that was never meant to be
compatible to anything, including itself. (Read the manual)
GVW 2.48 16 color is not even compatible to GVW 2.48 treucolor
(according to the manual)

942. Jaguar: Bad Influence review transcript.

Newsgroup: comp.sys.atari.st
Date: 1993-10-16 15:21:37 UTC
From: steve@earth.ox.ac.uk
Message-ID: <1993Oct16.152137.8513@eeyore.earth.ox.ac.uk>
Source record: 199268

[Credits plus intro...]

[Andy Crane introduces with this...]

But first, now look at this, it's the world first ever arcade game, PONG.

[screen shot of a game of PONG]

It came out nearly 20 years ago. It was a simple but very playable tennis game.

[Picture of Nolan Bushnell.]

It was invented in 1974 by an american Nolan Bushnell who later went on to form the Atari video games company.

[Shot of Andy Crane playing a game on the Jaguar whilst talking..]

And now Atari have another world first, the world's first 64 bit games console, the Jaguar.

[Shot of Jaguar with a prototype cartridge, ie circuit board, in the slot.]

This is the only one in the country, in fact it's so new that the games aren't even in their proper cartridges yet.

[screen shot of game being played by Andy Crane whilst talking.]

As you can imagine, it produces fantastic quality and sound. This is <video sound faded>..galaxy, a bog standard space shoot'em-up which comes with the machine, but look at the detail in the pictures, and look how smoothly everything moves.

[Shot of Violet Berlin behind table with NES, Master System, SNES and Megadrive]

So, what does 64 bit mean?

Well the first consoles like the Master System and the NES were 8 bit consoles. Now, don't do this at home

[she lifts the top off the Master System and NES]

but, if you look inside them you can see that there are 8 lines etched into the circuit board.

[She zaps the NES's chips with her finger]

Now each line is a connecting wire, and each wire can handle one bit of information. Which means that these machines can deal with 8 bits of

information at once.

Moving across to the 16 bit machines,

[she moves over and lifts the lids off the SNES and Megadrive]

the SNES and the Megadrive and looking inside them, you can that these ones have 16 wires connecting between the chips,

[She again zaps a machine with her finger]

which means that they can handle double the information at one time.

[View of Andy Crane with Jaguar on the table in front of him.]

Not surprisingly then,

[he lifts the lid on the Jaguar]

in the Jaguar 64 bit machine, there are 64 wires connecting each chip.. there're here...

[Andy Crane zaps the chips with static from his pointing finger]

Although they are so faint you can barely see them. Strictly speaking, the Jaguar is two 32 bit machines, one dedicated to sound, one to pictures. And it has special custom chips to make it move even faster. They are nicknamed Tom and Jerry.

[He again zaps the chips with his finger.]

It's these two here... Jerry is dedicated to producing high quality stereo sound, and Tom to moving graphics that allow programmers to produce effects like this...

[Screen image of Cybermorph.]

This game is called Cybermorph and you can see the way the space ship changes shape as it flies. Objects on the screen can be stretched, squashed and warped at will. the machine can also do texture mapping as in this early version of Alien vs Predator.

[Screen shot changes to Alien vs Predator]

You can choose to be either the Alien or the Predator and stalk your opponent thorough the tunnels. And this is an early version of Chequered Flag II, based on the arcade game favourite Vertua Racing (I think that's what he said).

That machine should be in the shops in this country around Christmas.

[View changes to Andy Crane putting the top back on the Jaguar]

And add-ons like a CD drive and virtual reality helmet are planned for next year.

[End of review]

[The rest of the programme... Then...]

[Andy Crane plays with the shoot'em-up on the Jaguar and says...]

This week's competition prize... yes, you could own the first Jaguar 64 bit console in the country. Oh, you'll have to wait a few weeks for it 'cos it's not out for ages. However, we'll make it worth your while cos not only will we give you that but we'll send you don't to London for a special presentation and in the mean time, to placate you, we'll give you the Bad Influence T-shirt. But, the competition question is...

[Picture of a Cheetah stretching side-on, plus phone number and cost banners.]

What is the fastest land animal? And it's NOT the Jaguar..!

Phone in on 0-8-9-1--700-100, 0-8-9-1--700-100, Calls will cost you no more than 25p, but do get permission from whoever pays the 'phone bill before you call. Lines will stay open until midnight on Monday.

[Scene changes to Violet Berlin behind a table, and Andy Crane to the left with the Jaguar and monitor on the table..]

Violet Berlin: "That's it for now, see you next week."
Andy Crane: "Thanks for watching, bye!"
Violet Berlin: "Bye!"

[Titles roll..]

Now, a transcript of the Datablast details shown during the end credits. This is word for word, and includes the original formatting.

The Datablast is a set of text pages shown during the end credits, one per two TV refreshes. It's designed to allow people with video recorders to gain more info using the freeze-frame and picture advance buttons. It's generated on an Amiga by the way.

Page 10
BIG news this week. It's the
amazing ATARI JAGUAR!
ATARI, the company that started
off the video game craze have
decided to skip a generation,

Page 11
with its new game console...
going all the way.... it's 64bit!
All you techies might scream,
shout & yell, "that's not possible"
...and yes, you are right... it

Page 12
cheats by using two 32bit chips
working together... giving 64bit
power.

So, how powerful is it?
...it runs at 55 mips.. that's 100

Page 13
times more powerful than your
poor old SNES and MegaDrive!
and is twice as powerful as the
3DO!

Page 14
...has 16 million colours
... 16bit CD quality sound
...claims VIRTUAL REALITY
capabilities???

Page 15
...realtime Texture Mapping,
Morphing, Warping, Light
Shading and transparency!
And the most amazing feat of all
is the price... the American

Page 16
release price is $200... that's
about #150!
The Jaguar is cartridge based,
but like the MegaDrive a CD
add-on is planned...

Page 17
...the CD will allow Full Motion
Video, Kodak CD's and Karaoke
CD+G. Other add-ons are in the
pipeline... modems, cable TV
link & even a plug-in telephone?

Page 18
Unlike the CD32, not many
games have been produced yet.
But, I hope ATARI are thinking...
"Quality rather than quantity?".
The software that we have seen is

Page 19
is a bit lacking - but the machine's
potential shines through.

ATARI are welcoming third party
developers, and many BIG names

Page 20
are already developing for this
machine.. it's been a long time

since ATARI came out with a
classic game of thier own.
The Jaguar might at last be

Page 21
ATARI's best attempt to get its
head out of the clouds and show
the public that its products are the
ones to buy.

Page 22
The JAGUAR is to be released
in America very soon...
...a limited stock will hit the UK
before Xmas... but don't expect
loads of games until '94.

Bad Influence is (c) YTV Ltd 1993.

I'm sure they'd not really object to this text being broadcast on
comp.sys.atari.st. Best not send it elsewhere, however.

Well, there you have it.. I'll not comment on this at all.

I think I did that with MonSTer in Low-res, but it was pretty painful.
Since GEM NetHack 3.1.3 uses only legal system calls, it should work on
anything (ie, graphics boards, virtual screen drivers, etc). It's a
really great example of good programming!

>
>1) Has anyone had any problems reading/writing to 720k and 1.44M disks?

Yeah...720K would read and write..but to Format it....there always seemed to be
a problem...1.44 ist fine..

>
>2) Any problems I should know about before I plunk down my money?

It overheat's EXTREMELY easy....it is DAMN slow...m personal opinon...the
concept is nice..it's not too popular and:

1. If you want a fast multiple storage device get a syquest
2. If you just want to backup..then get a tapedrive

The Floptical is between te two of them...that's what I don't like..it's too
slow to use as an actual boot-up or startup, it's great for archiving...butfor that I think
it's not worth while..

>

949. Atari ST emulator....

Newsgroup: comp.sys.atari.st
Date: 1993-10-16 18:35:31 UTC
From: tdunn@morgan.ucs.mun.ca
Message-ID: <tdunn.750796531@morgan>
Source record: 199276

I was wondering if an ST emulator exists for the IBM PC AT. I'm looking
to play some ST games on my PC

Even an 8 bit emulator would be better than nothing....

>experience" on their promo CDs on a MacIIci. Was this done on an ST? I
>hope so....

I thnik he was referring to a Falcon with DSP un/compression. Now what is quite
nice it that on a essentiall 16Mhz machine to get via DSP aid this quite
incredible uncompressing technique. We shouldn't forget that MPEG Compression usually
requires a really fast machine to play at any decent speed.

Quicktime Movies..I don't think the are MPEG compressed now are they? FLI or
FLC animations or even FLM *grin* animations play a lot faster...but they ALSO
take up a lot lot more diskspace :)

>
>>I tell you it's incredible. BUT,

>>Too bad, when you see what it gives you.
>

That is quite sad....too bad I guess..then again...you also need to consider
that there are not enough Falcon's out there to make this purchase pay out
(it's a risk one way or the other)

>

Well...if anyone cares :) *grin* Warwick's GEM Nethack work's JUST fine with
th NOVA VME or SUPERNOVA and also runs in 256 Color's (but doesn't support it)
in as high as 1088x832 or higher (with a seriously small screen though).

It support's the Virtual Resolution on te NOVA as well..so I don't see why
it should work with thoes other screen expanders..

953. a.a.u.e login tip

Newsgroup: comp.sys.atari.st
Date: 1993-10-16 19:16:29 UTC
From: swhatley@blkbox.COM
Message-ID: <CF087J.35M@NeoSoft.com>
Source record: 199283

Hello,

I finally got tired of repeatly trying to login to a.a.u.e. I decided to write a script in FLASH to do it for me. It works great! The following file is that script. You may notice that there is no username or password prompts. That is because I use a '.netrc' file to automatically log me in to anonymous ftp sites. .netrc is for UNIX based systems. See the manual page on ftp for more information. If you use the .netrc file, you will need to type the command 'chmod 600 .netrc' to set the privileges. Ftp will not use the .netrc file if group or world privileges are set.

AAUE.DO goes on the Atari system
.netrc goes on the internet host system.

I hope this helps some people.

```
---------- AAUE.DO ------------------------------------------------------
> WA "dummy" 1|
> L: START|
ftp atari.archive.umich.edu|
> WA "Weekday" 10 DONE|
bye|
> WA "dummy" 2|
> JMP START|
> L: DONE|
cd atari|
> END|
---------------------------------------------------------------------------
--------- .netrc -----------------------------------------------------------
default

login anonymous

password <your email address>

macdef init
hash on
prompt off
bin
---------------------------------------------------------------------------
```

>Also, I would like to connect my ST SCSI drives to the Falcon. What is
>required? (Can I just get a cable fitted for SCSI-II 50-pin to the
>SCSI-50 pin?)

You've got it if the ST SCSI drives were truly SCSI and not AdSCSI.
Atari dealers carry that cable for about $25 -its pin layout at the
Falcon end is really tight - might discourage homebrewing.

If the drives were really AdSCSI then you need to disconnect the
SCSI to AdSCSI board and then you are set to go if you can still
get a connection to work with.

963. Mega STE/Falcon/TT speed comparison

Newsgroup: comp.sys.atari.st
Date: 1993-10-17 03:43:50 UTC
From: gt1448b@prism.gatech.EDU
Message-ID: <117412@hydra.gatech.EDU>
Source record: 199289

Here are results of a test I ran comparing my Mega STE to a Falcon and a TT. Note the code is 68000 optimized, floating point math intensive, does not use the FPU, and uses data in large arrays.

Machine	Relative Speed		
MSTE 8MHz	1.00	0.53	0.45
MSTE 16MHz	1.88	1.00	0.84
Falcon	2.24	1.19	1.00
TT (TT-ram)	4.27	2.27	1.90

What surprised me most was the speed of the TT. With a 32 bit data bus and 32 MHz processing speed, I would think that the code would run faster than 2.27 times the speed of the 16 MHz MSTE. My results compared favorably to to the GEMBENCH 3.1 floating point test without FPU. Unfortunately it does not have a comparision for a TT without

971. 2.5 Meg STe ??!!

Newsgroup: comp.sys.atari.st
Date: 1993-10-17 15:15:07 UTC
From: vctec@westminster.ac.uk
Message-ID: <CF1rpA.3o3@westminster.ac.uk>
Source record: 199307
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Dear Atarians,

Has anyone used any of the patches (SIMMFIX, 2.5M_STE) so that the STe's can use 2.5 Megs?

I have an STe installed with switchable Tos 1.06/2.06 (Compo).

The problem is that I when I install the extra memory in my 2Mb STe, and have one of the 2 patches that I have come across, it does not work.

From one of them, on booting up, I get the message : 2.5 Meg patch not installed. However, when I take the memory out, it comes up with the message that it has been installed !!!!!

I have not tried using the software with Tos 1.06, but then I don't relly use this OS that often, so there is no point.

Any help ?

Thanks in advance.

Yes, I thought so. Nevertheless, in my opinion the system wasn't bad.
Regardless of the fact the todays workstations are of course faster the TT
is not too slow to use System V on it. For me it means that I'm independent
from the machines at the university. And you learn a lot concerning system
adminstration with such a machine at home.

>also (it would be great if he had control too, hopefully he can at least
>see what Im doing).

CoNnect is able to do so. You just have to start a little script
like
send 'Remote Script'
while true; do
send -n 'Your Input >'
get a; echo "$a"; eval "$a" > AUX:
done

This is the usual way I dial into my computer.

Hi all,

I was wondering if anybody has gotten the children's programs "KidSong1" and "Potato" off Umich to work? I try to unZoo them and get two bombs (bus error??).

My five year old waits eagerly...

Hi,

Lately I have been corresponding with David A Steward (the?) about Atari FTP Sites. I Told him about a program named Archie. He probably doesn't have that program, so I'd like to mail him where to find it.
Unfortunately I lost his adress.

So,

David, if you read this one, lemme know where you are. I have the answer to your problem!

Thanks for posting that, Stephen. I wanted to correct a mistake that was made in the transcript, and a common misconception that has been floating around:

>in the Jaguar 64 bit machine, there are 64 wires connecting each chip..
>there're here...
>
>Although they are so faint you can barely see them. Strictly speaking, the
>Jaguar is two 32 bit machines, one dedicated to sound, one to pictures. And
>it has special custom chips to make it move even faster. They are nicknamed
>Tom and Jerry.

The Jaguar does have 2 32 bit RISC chips, it's true. BUT: the reason it's called a 64 bit machine is that it does, indeed, have a 64 bit wide bus. The Jaguar blitter and the graphics RISC chip are connected to main memory by that 64 bit bus, and can transfer 4 16 bit pixels at a time.

Let me repeat: the Jaguar does have a 64 bit bus, and *that's* the reason we call it a 64 bit machine. (If we were doing something silly like adding the bus sizes of the individual processors, we'd have a number a lot higher than 64; actually it would be more like 256 :-)).

(I have a Jaguar development system sitting on my desk, so I know whereof I speak. And no, I can't reveal any details beyond what Atari has already released to the public...)

Some time ago I saw a (couple of?) Atari ST 1040 with color monitor sold for just $190, and I missed buying it.

Wonder if anyone else out there would sell a 1040ST with color monitor for about that price. The best I have so far is about $300, but I actually just need the system for a couple of hours but for about $200 I dont even mind having an ST just sitting around :-)

A looooong time ago, I bought the game Leaderboard Golf for my ST ... the original version, with the little dongle for the joystick port ....

It has stopped working .. dunno why .. it crashes both on my 520ST and on my Falcon ..

I started disassembling it to find the error, and boy ... there were quite a lot of them ... they seemed "Falcon specific" though, I still can't understand why it doesn't work on the ST ... it displays garbage on screen and crashes badly when pressing SPACE in the beginning ... from my disassembling I've found that it tried to clear a screen starting at $0 ..
:-)

Now, I've started correcting these "bugs", and I expect to have a fully working Falcon version ready this week .. (no Backward needed, and it loads from harddrive)

BUT .... I want to know if someone else has a fully working version, maybe even working on the Falcon?

If so, please Email it to me .. I have the dongle and everything, all I need is the files ... (probably only the .PRG, the .NEO files seems fine)

(If anyone else is interested in a Falcon version, please email me .... No, I won't remove the dongle check!)

This indeed appears to be the case. Anyone with a 68000 only, don't
bother getting GEM NetHack until I find out what's causing the problem.

I've been given some excellent pointers from netpeople this morning,
and so I should be able to track it down soon.

68030 is no problem.

>With GEM in the NETHACK.CNF I only get two bombs. With TTY I can play
>but after being killed I get the HiScoreList and then a message saying
>'suddenly the dungeon collapses' ... bad window id# ?????

Yep. The TTY mode isn't really up-to-scratch. Other stuff doesn't
work either (for example, the cursor keys). I'll probably chop it
out completely next time (save on memory - this executable is getting
HUGE!)

Yes: turn on you computer and abort the memory test before the hard
drive has come up to speed.

On TOS 3.05, you might need to use the "NOROACH" program as well.
(I can't remember - but my friend has a TT with 3.05 and I know
it doesn't have the "memory test" at the start).

There are excellent docs for the G++ library, and the GCC library are just
standard C libraries. Unless you mean the GEM/AES/VDI libraries. For those,
any GEM documentation is valid. Grab the Progem docs from the
/atari/Programming directory at atari.archive.umich.edu or its mirrors.

... that's GEMFast's fault, not GCC's.

Here is my GCC/G++ set-up doc:

```
/*************************************************************************/
OBJECT::ATARI
/*************************************************************************/
```

Part 2 : Setting up G++ - the GNU C/C++ compiler.

by Warwick Allison

==========

This article describes the process for setting up the GNU C++ compiler
on an Atari ST, STe, TT, or Falcon.

First, there isn't much point continuing if your system is not up to
the task. In order to use the GNU C++ compiler, you will need at least:

4 Megabytes of RAM
5 Megabytes of free harddisk space

Next of course, you need to be able to get hold of the relevant files.
This may mean downloading them from a bulletin board, GEnie, Delphi, or
other online service, or FTPing them from an Internet archive site.

I can't help you much with finding a source, but the one I use is the
FTP site:

atari.archive.umich.edu

"cd" to the directory:

/atari/Gnustuff/Tos

Under there, you will find various subdirectories containing the files
you will need. In general, these same filenames will appear on other
on-line sources.

When getting files, make sure you get the most recent versions. The simplest
way to do this is to look at the datestamp on the file.

The files you need are:

Executables

The current version of the compiler is 2.3.3, but you also
need a number of auxiliary programs. You need:

("#" = some digit)

Tool	File	Possible archive names	Comment
compiler driver	gcc.ttp	gcc233b.zoo gcc233b#a.zoo	Also has C compiler
compiler	gcc-cc1p.ttp	gcc233b#b.zoo	Avoid: g++233.zoo
assembler	gcc-as.ttp	gcc233b.zoo gcc233b#a.zoo	(with the driver)
preprocessor	gcc-cpp.ttp	gcc233b.zoo gcc233b#a.zoo	(with the driver)
linker	gcc-ld.ttp	utlbin33.zoo utlbin##.zoo	Keep all utils!

other useful utils:
cnm.ttp, fixstk.ttp, gcc-ar.ttp, gcc-nm.ttp, gcc-size.ttp,
printstk.ttp, size68.ttp, sym-ld.ttp, toglclr.ttp, xstrip.ttp

look in directories like:

Gnustuff/Tos/Gcc
Gnustuff/Tos/G++
Gnustuff/Tos/Utils

Libraries

The compiler will be no use to you without the libraries.
GNU C/C++ library files have a ".olb" extension.

Library	File	Possible archive names	Comment
C++ library	g++.olb	gplibo15.zoo gplibo17.zoo	MATCH with headers
C, sys library	gnu.olb	libolb87.zoo	You need this too.
Runtime library	crt0.o	libolb87.zoo	You need this too.
Math library	pml.olb	pmlolb21.zoo	Maybe this too.

look in directories like:

Gnustuff/Tos/Gnulib
Gnustuff/Tos/G++
Gnustuff/Tos/Pmathlib

other useful libraries inlcude termcap.olb and curses.olb

Headers

The libraries are impossible (practically) to use without the
corresponding header files.

Header	Files	Possible archive names	Comment
C++ headers	*.h	gplibo15.zoo gplibo17.zoo	MATCH with library
C, sys headers	*.h	gcc233b#b.zoo	Needed.

Shell

It is very difficult to use GNU C++ without a CLI (command line
interpretter). Fortunately, plenty of shells are available - you
probably already have one, otherwise, try:

Shell	Files	Possible archive names	Comment
gulam	gulam.prg	
mupfel	mupfel.prg	gemini.zoo

Now, you've got a whole pile of files... now you have to put them
together in the right way.

Directories

Place the files in directories (folders) as follows:

/gnu/bin All the .ttp files
/gnu/lib All the .olb files, and crt0.o
/gnu/include/gcc All the .h files from the C packages
/gnu/include/g++ All the .h files from the C++ header package
/tmp Nothing - but GNU C++ will use this directory

Environment

In order for the GNU C++ compiler to work, you must tell it
certain information about your set-up. This is done by
using "environment variables". The relevant ones for G++ are:

PATH - A comma-separated list of directories were
executable programs are found. Your
shell will already have one set up.

GNULIB - A comma-separated list of directories were
libraries are found (olb files). Also,
the first directory in the list must
also contain the crt0.o file (runtime
code).

GNUINC - A comma-separated list of directories were
include files for GNU C and GNU C++
are found.

GXXINC - A comma-separated list of directories were
include files for GNU C++ are found. G++
looks on this path first for include files,
then looks on GNUINC.

TMP - A directory where G++ can store temporary files.
It is also a good idea to set TMPDIR and TEMP to
this directory too, as some programs use those names.

GCCEXEC - The prefix added to the commands the compiler
driver requires. For example, if your "gcc-cc1.ttp"
is in /gnu/bin, then this should be "/gnu/bin/gcc-",
because the compiler driver looks for "cc1".

Environment variables like PATH are set by typing:

export PATH=.,/gnu/bin,/bin

or perhaps:
PATH=.,/gnu/bin,/bin
export PATH

or perhaps:
setenv PATH .,/gnu/bin,/bin

or perhaps:
setenv PATH=.,/gnu/bin,/bin

You will just have to see what convention your shell uses.
Assuming the first, and assuming you have the directories
set-up as above, type:

export PATH=.,/gnu/bin,/bin
export GNULIB=/gnu/lib,/usr/lib
export GNUINC=/gnu/include/gcc
export GXXINC=/gnu/include/g++
export TMP=/tmp
export GCCEXEC=/gnu/bin/gcc-

Of course, you don't want to have to type those in every time you
turn your computer on. Therefore, you should put the lines into the
automatically read start-up file for your shell. For example:

gulam.prg reads gulam.g at start-up
mupfel.prg reads mupfel.mup at start-up

Finally, it's time to test it.

Using a text editor such as elvis (vi clone), emacs, microemacs, tempus,
etc. or even a wordprocessor that can output PLAIN ASCII, create a file
called "hello.cc", containing:

//

#include <iostream.h>
main()

```
{
cout << "Hello there++" << endl;
}

//////////////////////////////////////////////////////

(The "//" bits are just comments)

Then, at your command line, type:

gcc hello.cc -o hello.tos -lg++

This should produce a file called "hello.tos" which when run prints:

Hello there++

And you have succeeded in installing the GNU C++ compiler.

Trouble Shooting
----------------
Of course, things never work first time.

First, make sure everything is located as described above.
Your shell should tell you if it cannot find "gcc", in which
case, your PATH variable is not set correctly.

If gcc is being found, type:

gcc -v hello.cc -o hello.tos -lg++

This makes additional information appear. Something like this:

gcc version 2.3.3
/gnu/bin/gcc-cpp.ttp -lang-c++ -v -D__cplusplus hello.cc /tmp/1234.i
GNU CPP version 2.3.3 (Atari ST)
/gnu/bin/gcc-cc1p.ttp /tmp/1234.i -dumpbase hello.cc -o /tmp/1234.s
GNU C++ version 2.3.3 (Atari ST) compiled by GNU C version 2.3.3.
/gnu/bin/gcc-as.ttp -o /tmp/1234.o /tmp/1234.s
/gnu/bin/gcc-ld.ttp -o hello.tos /gnu/lib/crt0.o /tmp/1234.o -lg++ -lgcc

(actually, it will probably print heaps more than that)

In the example above, we see that gcc.ttp runs, and it then
runs gcc-cpp.ttp (the preprocessor) on hello.cc to produce
1234.i (in the temporary directory). Then, it runs gcc-cc1p.ttp
(the compiler itself) on 1234.i to produce 1234.s (assembler
code for your program). Next, it runs gcc-as.ttp (the assembler)
on 1234.s to produce 1234.o (binary object file). Finally,
it runs gcc-ld.ttp (the link editor/loader or "linker") on 1234.o
along with crt0.o (the runtime support), gnu.olb (the system library
and g++.olb (the C++ library) which links the necessary parts of
each of them together, to produce hello.tos, which you can run.

The important thing is that each program is run correctly.

The "1234" is just some random number.
```

Also, the compiler (actually, the linker) may produce a file
called "compiler.err" in the directory you ran gcc from. look
at this ASCII file for additional information.

One of the most common mistakes is if the filename of your
compiler does not match the one gcc.ttp is looking for. For example,
if your compiler is named "gcc-cc1+.ttp" instead of "gcc-cc1p.ttp",
the compiler will not find it.

If the compiler reports that it cannot find a library (or crt0.o),
your GNULIB variable is incorrect.

If the compiler reports that it cannot find "iostream.h", check
that GXXINC indicates a directory containing iostream.h.

Notes about the GNU C++ compiler

The program generated by the "hello" code above might seem very large
(over 100K), but this is because it must link in many libraries in order
for iostreams to work. If you don't like large executables, there are
some simple things you can do:

1. strip the debugging data out of them, by typing:

xstrip hello.ttp

2. use the C Input/Output libraries rather than the C++ libraries
(eg. use printf("hello world\n") rather than the cout << ...)
in fact, this also makes things faster too, since the iostream
header files are quite large and take time to read in. Of course,
you are sliding back into C code then.

The GNU C++ compiler (and the other GNU compilers) have DOZENS of
optional features, from Optimization (add -O2 on command line when
compiling) to support for the 68030 and 68882 special features (-m68020
and -m68881 respectively). You can make it assume "int" is just a 16-bit
value (rather than the default 32) with -mshort.

That is about as much help as I can give for setting up the GNU C++ compiler.
It may seem like a long process, but it is not really very difficult - I have
just tried to cover as many possibilities as I could think of.

So go get those file, set it up, and you will be ready for the next articles
in this column, where you will see actual programming examples!

>when you have complicated 3D graphics.

A proper application has EACH COMPONENT written in the language that
fits the problem. A 3D game has ASM low-level graphics routines, but
C++ objects at the higher levels.

Believe it or not, the high-level notions available in C++ are FASTER
than those a human ASM programmer will use at that level. For example,
how many ASM programmers use function pointers and jump tables rather
than simple "if this then jump there" type code?

>And when your application is finished, you should replace the time
>critical parts of your application with fine tuned versions -- ultimately
>assembly. But typically will those time critical parts take only 10%
>of your complete code -- so only 10% needs to be redone.

Yes. Also, if you can push that low-level code into a library with a
nice interface, you can reuse it over and over - make StarGlider II
with your Elite code, etc.

I don't believe in language wars. There IS NO ultimate language.
ASM has a very definate place on non-RISC machines.

989. *NOTE* VGA monitor cable for Falcon

Newsgroup: comp.sys.atari.st
Date: 1993-10-18 04:22:10 UTC
From: Jinlung Fung <jf4y+@andrew.cmu.edu>
Message-ID: <AgkVbmu00WB3EX8ndR@andrew.cmu.edu>
Source record: 199325

Hello folks!

I was sourcing around for how to make a VGA adaptor for the Falcon and I found the text file FALCADAP written by Bryan Edewaard on a.a. (with the help from several kind souls here).

The text file was well written and informative and I set out to make a cable for myself. Instead of using a DB-19 connector (which is rare), I sliced off part of a DB-25 connector to make it fit. This works fine and now I am getting both VGA and SC1224 resolutions on my multisync monitor.

HOWEVER I spent 2 hours troubleshooting the cable. The reason is that in the Falcon manual specifications, the pinouts for the monitor connector was labelled wrongly!!!. Pin 1 should be on the left instead of pin 10 as indicated. This 'minor' printing error caused me so much agony and time in the process of figuring out where the problem was. There was no major harm done but it was really frustrating. I hope that Bryan will include this note in his text file to help others who are trying to build a cable themselves.

On a lighter note, the Falcon demos ARE good! (i.e. mind-blowing)

Uh huh... huh huh... cool

Auto Booting the Atari TT030

First, turn on the computer's power switch, as soon as the monitor flickers, press the [Space Bar] (kills self RAM memory test preventing anything to be written into RAM memory)

Next, when the disk drive light comes on I press and hold down the [Alternate] key (forces machine into ST Low Rez).

I do this to Auto Boot 'Dungeon Master' and 'Chaos Strikes Back' even with X-Boot I have set the by pass X-Boot hot key to the [Alternate].

>But of course you admit that by saying you mileage may differ :-)
>
>Erlend.

While what you say is mostly true, (and so I won't call you names <grin>)
the width and speed of the path between the CPU and memory obviously does
make a difference. Localbus speeds you up if for no other reason than
that screen redraws are faster, and Gemulator is a very screen intensive
program most of the time as it's running GEM programs. A 386 and 386SX are
identical in everyway (at least in terms of what software can detect and how
it behaves) except for... bus size! That's why, as you correctly state,
I can only give approximate speed figures and "your milage will vary".
You can take two 486 machines based on the exact same type of CPU and
get almost a 2:1 speed difference in emulation speed. Even on decent machines
there is still about a 10% improvement when going from a ISA 486/66 to
a localbus 486/66 when you run GEMBench. Unfortunately the whole emulator
does not fit into the 8K cache of a 486 and so it is not running entirely
from cache as you think.

992. ReSOLUTION VGA video card

Newsgroup: comp.sys.atari.st
Date: 1993-10-18 07:37:31 UTC
From: DOMINGO@delphi.com
Message-ID: <01H48S4JFR6E8ZG89Q@delphi.com>
Source record: 199328

Hello world! :-)

I am trying to get some information about the ReSOLUTION VGA video card. My local computer shop wants to sell one to me at a discounted rate. It has never been used, save the time it was plugged into my machine for testing...

What I need to know is what ever happened to the programmers or designers of the system, and what are the cards capabilities.

As far as I could ascertain, it is a programmable SVGA card with Tseng ET-4000 chipset. It can show 16 colors on the screen at a time. There was a planned 256 color VDI driver, but as far as I know it was never written. I was told that there exists a version of NVDI for Tseng ET-4000 video cards. Is this true? And if so, will it work with the ReSOLUTION VGA card?

I am just trying to get better resolution and a few more colors on the cheap.

If anybody has information about the card itself as well as getting it to show more than 16 colors, that would be great.

Thanks!

Dom

P.S. Please reply via e-mail...

>* Cache can be switched on an off
>* Can be switched back to 8 MHz

These devices are also available in the UK, through Systems Solutions
(aka Atari Workshop). It should be noted, though, that they are ST only,
ie not available for the STe.

Karl from Systems Solutions has said that they will produce an STe version
if demand is sufficient, so give him a call if interested.

The board sounds to me to look like a useful stop-gap until a sufficiently
powerful Falcon is produced (if...)

The difference is -m68881. This instructs the compiler to use inline
FPU instructions, and also to include <math-68881.h>, which converts
all functions from pml.olb into inline sequences. You only have to add
-lpml to the command line.

Strange. I also play nethack on my Mega ST4, and escaping to Mupfel works
fine. Are you sure you didn't load nethack with the Gemini/Mupfel "overload"
option? This memory-saving feature always deletes Gemini resp. Mupfel from the
memory before loading nethack and reloads it afterwards.

Source record: 199337

I have an Atari 1040 ST from (I think) 1987. I use it to program in Turbo C (1.0). I run TC from the Neodesk (v2.01). Yes, I know this is all pretty old stuff, but it works fine for me, or at least it used to. The problem I ran into is the following: I have been writing an adventure-language compiler for the last couple of months and by this time my sourcefiles have grown so large that it takes a long time to compile them all. If I select `make <project>', TC also compiles the modules that haven't been changed since the last compile. So it always does a complete make. I think this has something to do with the system time, but I have been unable to solve this problem. Please help!

Greetings all!
I'm posting this for a friend...

We're looking for a prg that can take GEM IMG pics and
print them on a STAR LC-10 printer, using multistrike.
I.e.: The printer should go over each line more than once,
making the picture darker.

If someone know a program that can do this and tell me
where to find it, we'd be very grateful.

Bye,
Krijn.

I have also tried this, but failed... An alternative is to connect the
two using a serial cable, then use standard comms programs on each... You
can then transfer files using ZMODEM etc... (if you're using a 3-wire serial
cable, make sure to disable CTS/RTS or the systems will wait endlessly...)

|>
|> Oki, so now we have a 320*240 screen .... why shouldn't we be able to do
|> 640*240 now? I mean, 640*240 = 320*480 when counting buscycles .. and since we
|> can do 320*480 .... oki, let's try ..
|>
|> NOPE! ... I *CAN'T* get a true colour screen as wide as 640 pixels, even after
|> this bus-saving mod of 240 REAL scanlines .... ***** WHY!!?? ******
|>
```

The problem with Truecolour 640xAnything on VGA monitors is that there is insufficient Bus bandwidth to do a _single_ scan line in the time required. If you remember a TV has a _horizontal_ scan frequency of about 15.5kHz whereas a VGA monitor's lowest horizontal scan is about 31.5kHz. Therefore 640 pixels per line on a VGA monitor requires twice as much bandwidth as the same horizontal resolution on a TV. I think that makes sense, if not it's cos I've just been down the pub for my lunch (and a few pints after...)!

```

1010. A short story - read it!

Newsgroup: comp.sys.atari.st
Date: 1993-10-29 16:08:09 UTC
From: peter@blade.stack.urc.tue.nl
Message-ID: <2arf59$hoc@tuegate.tue.nl>
Source record: 199345
Cross-posted to: comp.sys.amiga.advocacy,comp.sys.mac.advocacy,comp.sys.atari.st

This is a short story I wrote about a year ago to be published in the
newsletter of our computer club. I translated it from Dutch into English
(sorry for all typos and mistakes I made, after all, English is my third
language) to share it with the people on the Net. If you decide to
publish it, please credit me.

Peter.

The Big Mistake
by Peter Korsten

In a time, other than ours (maybe it was before, otherwise after it),
childern didn't have computers; instead, they had little farms. These were
isolated ecosystems: everything produced and consumed was recycled. In
such a farm, which was also called a system, there was a bunch of little
men that performed the tasks. These little men were semi-intelligent beings,
who got their assignments from the owner of the system.

Many manufacturers made these systems, but all systems had one thing
in common: exactly 86 little men walked around inside. An investigation,
that had cost a large amount of money, had pointed out that this was
the ideal number. So this value was taken without any question and
86 men were put in the systems, no more, no less.

No attention was given to the casing or other estethical values when
assembling the system. Random pieces of plastic were put together to
some or other grotesque contraption. These boxes were filled and then
packed, so they could start with a new, ugly case as soon as possible.

Now, there were three manufacturers who didn't follow the standard. An
independant investigation had proven that not 86, but rather 68 was the
ideal number of little men. Furthermore, more research made clear that
the first investigation had been tampered with, most notably by the
supplier of the little men (a man without a consience, who just wanted
to sell as much as possible, even if the product would suffer from that).

This caused a lot of upset. The manufacturers of the 86-men systems and
the supplier of the little men in particular named the investigation
inreliable and slaunderous. The supplier said that the three would no
longer receive the little men from him.

So they had to search for another supplier and they found him. His little
men were even better than the original ones. They had pretty clothes and
spoke in a civilized way; to be short, everything about them emitted
elegance. Often they were even performing several tasks at the same time.

The original men had inherited many genes of their ancestors; they dressed in furs and could only exclaim raw screams. To be short, they were rude and uncivilized savages.

The little men from 68-systems also had little animals that helped them. Moles ploughed the land and put flowers into the ground, from which the most beautiful beds grew. Seen from above, this was a fantastic sight. Birds sang in the trees, thus easing the work and oxes, handled by monkees, took care of the transport from and to the storage bins.

The men from the 86-systems had to do everything by themselves, the ploughing, moving the stuff around and exclaiming a raw yell once in a while. They rushed around without actually doing something or they just sat still, not looking at other things they could be doing in the mean time.

The 68-men also proved to be much smarter (more intelligent would be the wrong frase here) than the other ones. A simple gesture, a small movement of the index finger and they knew -- as if it were intuitive -- what the owner wanted them to do.

Things were entirely different for the 86-men. The owner had to perform complicated rituals, demanding the most of the hands, to explain them something. Often he made a mistake and had to start all over again. People tried to teach the little men the gestures, but if they didn't concentrate enough, they stood non-understanding. The owner could gesture and point, they just wouldn't react.

The manufacturers watched with envy how smooth everything went with the three and started a campaign against them. 68 men, that couldn't be right, could it? 18 less, that would come out to be too few. Nice to play with, but not very useful. No, 86 men, it had always been that way and it was meant to stay that way. In response, the manufacturers of the 68-systems showed that their systems worked better and that their little men could do many things more, even at the same time, that the casings were nicer and that childern liked the 68-systems more.

But the campaign was a success. The public, not being held back by any knowledge, believed the lies and bought the 86-systems with thousands. Childern, who got a 68-system from their parents, came home crying because they been teased at school by the other childern. Ah well, childern are ignorant, about the real matter of things as well as the damage they do. Childern are cruel.

It is to be hoped that the above will never come true -- or has come true in the past. It would be insane if you would fall outside a group, just because you didn't follow the masses. And it doesn't have to be for little farms alone.

Think, before you have your opinion ready. Think.

1011. External DS/DD floppy $50

Newsgroup: comp.sys.atari.st
Date: 1993-10-31 23:04:13 UTC
From: gbernath@oucsace.cs.ohiou.edu
Message-ID: <1993Oct31.230413.17744@oucsace.cs.ohiou.edu>
Source record: 199348

I have an Atari SF314 DS/DD external floppy drive for sale. $50, includes shipping in continental U.S. Works great, never had any problems with it.

I also have a turbo blitz cable for sale, which can be used with an external floppy to make backups of almost any copy-protected floppy disk. $15 + shipping.

1012. Search and Replace Utility Program WANTED

Newsgroup: comp.sys.atari.st
Date: 1993-11-01 00:50:51 UTC
From: marco@sys6626.bison.mb.ca
Message-ID: <gJ0acc1w165w@sys6626.bison.mb.ca>
Source record: 199202

Does anyone know of a program that will automatically do a search and replace on a certain file? I had thought of using GREP in Gulam until I realized that GREP will only search and not replace. (I guess I COULD make a macro for WordPerfect, but that's kind of a clunky solution--there's GOT to be a simpler method!)

Thanks.

1013. RSC text (was Re: European Newsgroups)

Newsgroup: comp.sys.atari.st
Date: 1993-11-01 01:31:51 UTC
From: warwick@cs.uq.oz.au
Message-ID: <16152@uqcspe.cs.uq.oz.au>
Source record: 199346

Julian_Reschke@ms.maus.de (Julian Reschke) writes:

>First of all, you can't put all messages into the RSC file (Mupfel!!!).

Why not with MUPFEL?

As far as I can see, there is only ONE string in any application that
cannot go into the RSC files. And that string is:

"[1][FOOBAR.RSC not found!][Abort]"

Nb: don't say that RSC files are limited to 64K - they are, but there
is nothing stopping you from using multiple RSC files. Sure, rsrc_load
only loads 1, but any number of application-loaded RSC files may be
used. GEM++ supports this, for example.

Okay, if it's not an application, RSC files is excessive (eg. who'd
want ls.rsc [dir.rsc for DOS users]) :)

Lexicor@world.std.com (Yat W Siu) writes:

>Imagine a simple sphere with one light source reflecting on it, rendered or
>raytraced. Now in 256 Color's you can infact see the rings of light (varied
>intensity) and also the dither to compensate for the loss of color.

100% true. The reason is that objects are often of a single hue, with
shaping across the surface (eg. that sphere). With 256 colours from a
64x64x64 palette, or with a 32x64x32 highcolour (Falcon) mode, you can
only get at most 64 shades of the hue of the object. So you get
banding. If you have a TT, use GEMview in the Grey mode at 320x480.
In this mode, you have 256 shades of grey, which is the same colour
resolution as 24-bit TrueColour (except, of course, it's only in black
and white). No banding in that mode (ugly chunky pixels though). Try
the POVRAY lamppost in that mode (since it has no colour anyway).

I agree completely... quit pushing your systems...

If I wanted to use any other system, I would... I have a PC, I have used MACS, and I have had all of the Atari systems... I prefer my Atari in the long run. I could care less how fast something runs... I care about how impressive it looks, and how easy it is to use. I am always impressed with Atari Software.

This area is to talk about the Atari computers... if you dont like Atari, then get lost. Dont cut a machine down that just about everyone in this conf uses/has.

Questions: What is a T40?
Is there something different with the DTR setting in a Falcon... I cant drop DTR and make the modem hang up like I could on my STe..
Why does stalker run Faster if you set it's port to the TT port (can go up to 157600 I think), where I can usually hit 19200 only on the ST port... and how come the Falcon can use either port?

My 2 cents: I think the Falcon is a great machine, BUT:
- It could have been FASTER (16mhz is stupid)
- It costs too much (just about $1000 more than a 1040STe)
- The Jaguar is cheaper, and seems to have better chip set.

Get GNU sed. sed is a standard unix tool that will do exactly what you
want, including everything you can do with grep. In fact, the name grep
comes from the sed command g/re/p, i.e. global/regualr expr/print.

1021. Calamus for Windows (RE :)

Newsgroup: comp.sys.atari.st
Date: 1993-11-01 11:25:29 UTC
From: c2sgy@dmu.ac.uk
Message-ID: <1993Nov1.112529.6374@dmu.ac.uk>
Source record: 199205

So it seems Calamus has made it to the PCs. I guess it was a move by
DMC to make sure their software received the power from the hardware
it deserved. Sure its good on a TT but not much else.
How many Atari users have 7 MIP (or higher machines) machines.

How many new users will plump for a MSTE/TT plus Calamus when they can
get a fast cheap clone plus the Windows version of Calamus.
And all their exisitng work is transferable as well !

I would stay but who else ?

Simon

1029. CHKDISK3 question.

Newsgroup: comp.sys.atari.st
Date: 1993-11-01 13:19:36 UTC
From: cf580@city.ac.uk
Message-ID: <1993Nov1.131936.29796@city.ac.uk>
Source record: 199210

Does anyone know whether the compress disk option in CHKDISK3 actually defrags the files, or if it just pushes all the clusters together, so to speak? And if the former, anyone know a decent (PD) defragger?

TIA.
Tim Wright - T.J.Wright@city.ac.uk

1030. PI Contest - The Winner

What's the scan rate? If it's not at least 72Hz and non-interlaced, I
really don't want to be staring at it for too long. That might be fine
for looking at pictures, but not for working...

1033. GCC 2.50 (and gcc 2.4.5) crashes

Newsgroup: comp.sys.atari.st
Date: 1993-11-01 13:51:28 UTC
From: cherborth@semprini.waterloo-rdp.on.ca
Message-ID: <H.eg.ZiSRAucHwyE@semprini.waterloo-rdp.on.ca>
Source record: 199214

I was all excited about finding gcc 2.4.5 and gcc 2.5.0 in the Newitems
directory at atari.archive.umich.edu...

Unfortunately, they both die a horrible death on my ST! gcc 2.4.5
produces two bombs if I try to use -O; gcc 2.5.0 produces three if I try
to use -O. Both times, it was cc1plus that was crashing... the other
bits seem to work fine.

Hopefully, I'll be able to dig up 2.4.4 again today... :-(

OUTPUT POWER TO THE PEOPLE.

Ready on desk - Ready to produce
LC-HQ In/Out Interface for Atari-ST.
(Non-commercial participation.)

Using the Centronics-port, featuring; "everybody can control it
from any language"

Purposes: * Controlling Analog devices (Including precision applications
such as synthesizer voices).
* Controlling Digital devices (directly, relais etc...).
* Programming RAM (and EPROM when some extra interfacing
is add).
* Running-light controller.
* Robot applications.
* Waveform generation.

On this Euro-board directly available:
---

* Data decoder, adress 0...254
* Demultiprexer for 16 channels.
* 6x 8 Bit High precision (0.027%) Digital to Analog
Converters (DAC's)
* 2 DAC's can be directly joined together to create a
Course & Ultra-fine Pseudo16 Bit DAC.
* 8 Bit logic register. (if DAC registers are used for
logic applications: 7*8=56 logic lines).
* The logic registers also can be set as input (by software
control) to read 8 data lines from the outside world.
* Easy to expand upto max 254 x 8 Bit data lines.
* On board precision reference voltage.
* Low power consumption.
* Fits in 19 Inch Rack ("19 connector lay-out)
* No difficult components (this is no contradiction!)

It's ready On Desk, It's ready for me and it could be ready for you!

Ask: Marc Marc Amsterdam for datails.
Phone +31 20 6259847.

>
> Ever heard the old saying "We lose money on each unit sold, but we
>make up for it in volume." :-)

Glen, if Atari 'loses money on each unit sold', then selling more units
would result in Atari losing even MORE money. 'Making it up in volume' is
good only if the increase in volume results in cost savings because of
increased economies of scale. (e.g., because they're selling more units,
they, Atari, can purchase the parts cheaper on a per-unit basis).

Hi,

Help ! I just bought a kit from Gasteiner here in the UK to "internalize" the Quantum SCSI drive I've got. It arrived without the "Installation Manual" mentioned in the contents list on the box - not too helpful really.

I rang Gasteiner and was told that that was how they were shipped from Atari - and the technical guy who might be able to help was out for lunch. I rang back the required 40 minutes later, when I was told that Gasteiner were waiting for some manuals from Holland which would be around in 2 weeks so they might be able to help me then ! Aparrently they might send them out to customers but I'm not going to hold my breath after the "friendly, helpful" (not) Gasteiner customer services.

Anyone out there know what I need to do to install this kit - I really don't want to wait "2" weeks before I can do anything. Being an Electronic Engineer I'm sure I can cope - I just need to know what to do.

Any help will be gratefully received.

Martin

: : I am looking for a program that will let me print out simple fonts,
: : (maybee 5 or 6 different fonts), and that accepts EPSON, or Cannon BJ as
: : a print device. Has anyone found a p.d. program of this nature?

: : Any suggestions??

: I still use EASYTEXT PLUS by zzSoft. Although it's not PD, it's only 20
: pounds to buy outright, and comes with GDOS.PRG and loads of fonts, and is
: compatible with Canon BJ when it is set to emulate Epson LQ. If you want
: the address of zzSoft, E-mail me, and I'll find out for you.

: There is also a demo version of EasyText Plus in the PD, which only allows
: you to use A6 size output.

I have now the address of zzSoft. The address is:-

zzSoft,
114 Sparth Road,
Clayton Le Moors,
Lancs. BB5 5QD,
ENGLAND. Tel. +44 254 386192

The cost of EasyText Plus is only 20 pounds Stirling, although there will
probably be a surcharge to post to the US. You will have to specify when
ordering 1) Printer, 2) Disk Drive(s), 3) Memory.

If you have any (easy) questions about this program, please contact me via
E-mail, and I will try to help you. I have had them all, believe me.

Anders Skar (anderss@edb.tih.no) wrote:
: Is there to be released a ICON editor for the F030 ??

If you mean a PD/Shareware Icon Editor, then I too would love one. There are in fact two programs available to edit the Falcon's DESKICON.RSC file, and also add into it icons from Windows 3.1. These are:-

Interface - Available in the UK for about 50 pounds from
HiSoft,
The Old School,
Greenfield,
Bedford MK45 5DE,
ENGLAND. Tel. +44 525 718181
Fax. +44 525 713716
E-mail hisoft@cix.compulink.co.uk.

Zoom - a cut down version of Interface, available in Germany for about 70DM, I do not know where from exactly, but I may be able to find out if anyone is interested.

: ....and what about the DSP modem/fax/mail-box ???????

The last I heard about this is that the program to use it is ATARI WORKS, which I believe has been shipped with Falcons in the US, but is not yet available in the UK. Rumour has it that this program does not exist/will not exist in the near future.

There is no reason why third parties should not develop software to do this though.

DOO (Dr. Doodle) pictures are pure dumps of the screen memory and therefore consists of 32000 bytes exactly when saving ST low, med or hi resolution pictures. However, the palette is not saved in this format. (32 k is, btw, not 32000 bytes, but 32768 bytes. There are 1024 bytes in a k)

Sorry for being off-topic, but I noticed something humorous. Just scanning the comp.sys.mac.advocacy newsgroup, I've noticed that our buddy Pete S (names hidden to protect the goofy) seems to post more messages here than in the advocacy group that just begs for his presence. Anyways, it might be an idea to forward his postings to comp.sys.mac.advocacy, where they properly belong...

Oh well, I know computers have more "thinking" power than their users, but more common sense? Who knew? ;-)

Well, to be more on topic (at least regarding an Atari/Mac posting), I have heard occasional mentions of MiNT being ported to the MAC. I'm just curious as to how this works out? Since MultiFinder/System7 already do multitasking, and since Macs already have longer filenames, etc, I'm not sure I understand the purpose of porting MiNT there. Just curious if anyone has a "non-propagandistic" explanation...

Rob

The old 'Doodle' format uses exactly 32000 bytes. It's for 640x400 monochrome only. Actually, it's a dump of the video ram.
Common used filename extensions for 'Doodle' are *.DOO and *.PIC

cheers,
Chris

1053. internal floppy

Newsgroup: comp.sys.atari.st
Date: 1993-11-01 19:07:53 UTC
From: jgj@ssd.csd.harris.com
Message-ID: <JGJ.93Nov1140753@rcx1.ssd.csd.harris.com>
Source record: 199229

The internal floppy on my Mega/ST has died. It spins up and the head seeks a few times, then the computer complains that it doesn't respond. I can find no one locally (SouthEast Florida) that will touch an ATARI -- all the old dealerships have stopped carrying them.

Where can I get a replacement? Will any old drive do? That is, is the driver and connectors the same as used in generic PC clones? Can someone point me to someone within a few hours driver of Ft. Lauderdale that will work on an ATARI. Help me please someone. I've been trying to call Atari (408-745-2034) but they never answer the phone.

I'm in trouble because my internal floppy died on my STF and I wonder if
I could buy a cheap 1.44 Meg PC floppy and put it my Marvelous Atari ?
Will it work as an 1.44 Meg floppy ? as a 720 K one ? or won't it work ???

Help me,

Thanx in advance,

1055. ATARI _DROPS_ THIER COMPUTER LINES!

Newsgroup: comp.sys.atari.st
Date: 1993-11-01 19:31:36 UTC
From: dlk0ms9s@umiami.ir.miami.edu
Message-ID: <1993Nov1.143136.16219@umiami.ir.miami.edu>
Source record: 199232
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

NOTE: THIS IS NOT A JOKE, FLAME, OR LIE.

Effective immediately, Atari Computer Corporation has ceased
production of ALL of it's computer lines. This includes all TOS,
DOS, and hand-held computers. This information was
released late on Friday., October 29, 1993.

I was given this information by my broker who constantly checks the
Atari news for me.

It also said that there might be a plan in the future to release
compatable computers at an affordable price.

Atari's only priducts for sale will be what is in the stockhouses,
the LYNX, and the upcoming Jaguar.

-time to start looking at those clones.

-Mark Santora

1056. STOP IT!!!!(adios:Atari)

Ok, enough's enough!!!
I think we've had enough of this silly discussion about "my computer's better than yours".
Aren't most of us past that childish stage i.e. "my dad's stronger than yours".
If some people are happy with their Apples- OK. But don't keep bothering us with your 'Apple
propaganda'. This happens to be the ATARI newsgroup, and most of us are happy with our ATARI
computers. They let us do the stuff we want 'em to do and we're happy with it, and THIS newsgroup is
devoted to discussions regarding the ATARI computers. NOT the APPLE vs. ATARI 'war' that some idiot
has started. So I say once again : S T O P I T !!!!!!!!!!! Go bother someone else if you don't
have anything better to do!

Atari has always lowered the prices on their machines after they've been
out 10-12 months. I wouldn't be surprised if the Falcon prices dip soon.

My understanding is that you have just described the Link. Older ICD
products were internal boards that needed a separate splitter power cable.
The Link does connect externally (on the cable), and does not require
an additional power supply. In addition, you can run more than one SCSI
device using one Link (the older boards did this as well). I suggest you
call up Toad computers (1-800-448-TOAD) and ask them about the ICD product
line.

: Thanks in advance,

The DeskWriter is a different beast entirely, so its drivers will never work with a deskjet. Deskjet speaks HP laserjet language; deskwriter speaks quickdraw.

Ftp to a mac site and download the deskjet drivers by Ollie Arnxxx and another guy, whose name I remember even less. It is at version 3.0 and works with almost all software. You can search for it in archie using DJ3.0 as a search pattern I believe. If you get really desperate and can't find it, mail me. I will point you to a site.

There are several mail order places that can fix your ST (and replace the
floppy if necessary). Here are some phone numbers:

TOAD computers 1-800-448-TOAD
Rising Star 1-800-252-2787
D&P Computers 1-800-535-4290
ATY Computer 1-510-482-3775

All of these came out of this month's Current Notes magazine. I strongly
suggest that you get a copy (TOAD could probably sell you a single issue)
and check it out. I have been a subscriber for a long time, and it is money
well spent if you own an Atari computer (IMHO).

I have had good experiences with TOAD and D&P. Good luck.

You should be able to buy any old PC-compatible 3.5" drive (1.44 or
720k) and plug it right into your STf. The ST will treat it as a 720k
drive no matter what (just like the old one). If you had an STE or
Mega STE you could get a replacement disk controller chip and use a
1.44 at 1.44. In short, any PC 3.5" drive will do, just don't expect
1.44megs out of it...

Hi,

Well, you can find POV-Ray sources on ftp access :
alfred.ccs.carleton.ca

I don't remember the directory (/pub/POv-Ray2.0 ....).
I have compiled it on a sun and it seems to have some problems with the
mapping.
I don't know if it is me or the programm.

Anyway, good luck !!!

Could one of the virus-killer writers contact me, as I've found one that nothing I have can identify (UVK thinks it is a harmless MS-DOS disk, but MS-DOS compatible disks don't copy boot-sectors onto other disks). I have isolated the code into a file. It *may* mutate, but I haven't done sufficiant tests on that yet as my virus-killer I was using for the job (Chasseur 2 which is good for this type of thing), was destroyed when my ^&*(% disk corrupted! (Moral - Backup!)

Are there any recent *english* virus killers?

This does work fine with high-density (1.44meg) floppies as well, if
you have the HD mechanism. I do this on my MSTE. The ST will also
handle some "extended" PC formats, like those made with the FD-Format
program (i.e. 820k double density, and 1.72meg high density). Saves
a lot of space in the high formats...

>right.

I think your division was right, though. I understand the idea
of dividing between actual prices (commercial and shareware fees)
but the shareware *status* is more meaningful I think, in that it lets
you pre-try it rather than just buy it and beware...

>I have now downloaded Connect, and will shortly be unarchiving it and
>trying it, but I am a little worried about the fact that the terminal is

>illegible on my 60Hz television, and may sway me back onto UniTerm.

It might strain your eyes if you're doing this on a TV (actually,
anything might be straining on a TV :-) Then again, I should talk -
I remember using a 80-column VT100 emulator on an Atari 8-bit
(we're talking 3-pixel-wide characters w/ 1 pixel between each on a TV
major eyestrain, but it got me through freshman year in college).
My *personal* opinion is that 640x400 would be the best minimum
resolution (though CoNnect even works fine in ST LOW res - though it isn't
too bad to run under MonSTEr, in virtual 640x400x16 ST LOW)...

Well the picture i'm looking at looks to be a an spc pic. I'm trying to
rip it out of a program and it starts out being ICE'd and unICEd comes
out to 32000. I'm pretty sure it's a pick.

Hm, Signum 3, Script in versions > 1.x with only one megabyte? At least you
loose a lot of functionality. And it sounds as maybe this guy don't even has
a hardisc. Programs that definitely work under these conditions are Tempus
Word junior (don't know about the bigger versions), Signum 2 or Script 1.
They also have the advantage that he should get them very cheap from someone
who didn't upgrade and switched to another program / system. I think that all
of the programs I mentioned can be recommended, it depends on what features
you really need and want. I can't say much about the other programs you
mentioned, though I'm afraid that Papyrus is a candidate of having problems
with only 1 meg, too. Long time ago I also came across a very good review
of "Redacteur", but since then especially wordprocessors have undergone
impressive improvements.

So long Martin

W >I know NEO,PI? come out to a little over 32k but is there anything tha
W >is 32k exactly?
W >
```

Well you a degas PIX (1,2,or 3) is 32034. The first word is a header which denotes the rez, the next 16 words are the color pallette for the pic and the next 16000 (32000 bytes) are the
raw image itself stored in the screen memory format for that rez.

```
1 WORD Header ( 2 Bytes)
16 WORDS Picture Pallette ( 32 Bytes)
16000 WORDS Raw Picture Format (32000 Bytes)
-----------------------------------------
16017 WORDS Total Size (32034 Bytes)
```

So if your just interested in the 32000 bytes of raw data just skip the first 34 bytes in the PIX file.

1085. Cookie eating GFA

Newsgroup: comp.sys.atari.st
Date: 1993-11-02 10:30:10 UTC
From: t150315@lehtori.cc.tut.fi
Message-ID: <2b5cri$cpj@cc.tut.fi>
Source record: 199160

Yo (don't confuse this with Yo-Yo, it's r-rreal art) Coders!

What are 'Cookies'? I know that they have something to do with
identifying resident programs (and XBRA with hooks), but besides
that...

Below is an example of how to use commands that your shell provides
for Gfa Basic'ers.

```
------ cut here ---------
' Using shell commands from GFA Basic by Eero Tamminen
' Works at least with Gulam and Mupfel
' (Gulam has inbuild a reduced version of MicroEmacs (ue) :-)
'
DEFWRD "a-z"
' shell_p pointer (to 'jmp execute_one_shell_command')
shel%=LPEEK(&H4F6) !access system vectors in supervisor mode
'
' have to check for 'jmp' instruction too, because shells don't clear shell_p
IF shel% AND WORD{shel%}=20217 !shell address installed and 'jmp' found?
RESERVE 5120 !free additional memory
buff%=MALLOC(256) !feedback buffer
command%=MALLOC(256) !command line
IF WORD{shel%-8}=&H135 !Magic number?
PRINT "Shell is Gulam!"
comline%=shel%-6
gulam=TRUE
ENDIF
'
PRINT "Executing 'ls' command:"
CHAR{command%}="ls" !C-style string
ret=C:shel%(L:command%) !pointer to string via stack (C: int system())
PRINT "returnvalue:"'ret
'
PRINT "<CR> exits."
IF gulam !only Gulam-shell
REPEAT
~C:comline%(L:buff%) !use Gulams line editor (commandline EMACS...)
PRINT
~C:shel%(L:buff%) !execute command
UNTIL BYTE{buff%}=0
ELSE !other shells
DO
INPUT "Executable command: ",line$
EXIT IF line$=""
```

```
CHAR{command%}=line$
~C:shel%(L:command%)
LOOP
ENDIF
PRINT "Bye!"
~MFREE(command%) !free buffers
~MFREE(buff%)
RESERVE
ELSE
PRINT "Where's the shell???"
ENDIF
EDIT
------ cut here -----------
```

You can modify Gulam's keybinding with diskeditor too. There are three keybinding for ue, mini and gulam buffers and three keyboard layouts for normal, shifted and capsLock'ed keys clearly layed out in the code... Shift + cursors and proper delete are first additions that spring to mind.

Doing it in script with kb command is for lamers only...
Hardcoding keeps your keybindings even if your gulam.g gets overwritten (experience talks...;-).

Gulam is FREEWARE shell by Prabhaker Mateti and Jwahar R. Bammi.

Eero Tamminen # C'ing limits.

So Atari spend millions of $$ on creating new technology and software
only to stop production ...

I also doubt seriously whether they want to make compatibles at all.
Take a look at CBM. They are pulling out of the PC market because it
is too competitive and it nearly dragged them under ... (which isn't a
bad thing ... :-))
Does Atari always say what its plans are anyway ??? Its only when they
have something concrete ie specs and a prototype then they release info
but since the Falcon030 and Jaguar have taken all their cash I doubt
it ...
I know Atari aren't that good but they aren't that BAD!

bunka@mibm.ruf.uni-freiburg.de (Andreas Bunkahle) writes:

>it to MiNT 1.04. My opinion is that the relationsship between Magix and
>MiNT is like OS/2 to Windows.
IMHO this seems to be a little far fetched. MiNT lacks the whole 'AES-section'
so Mag!x and MiNT can't be compared directly.
And MiNT adds new features to TOS, whereas Mag!x replaces TOS. Of caurse, the
combination of MiNT and the new Multitasking AES are not _that_ fast, but
working an the appropriate machine makes quite fun.
It is simply a question of what you are going to do. If you want to run a
CD-ROM drive (just to mention one example) there is hardly an alternative
to MiNT.
And another question is if we all want to work an a system like Mag!x still
in say 2 years. Only Atari has the power to introduce new features to the OS.
But this is vital because a system needs to be improved.

>Seems ya have to write one.

All a 68010 support is a decent page fault handling. To have function VM
you will need a mmu (a real one, not the standard ST mmu.)

And because you have a non-standard mmu in that case, you also will need
a non-standard VM driver -- which you will have to write.

I saw a prototype of Calamus SL for NT at the CeBIT this autumn. According to the staff at Olivetti, the NT version will use both standard Calamus fonts (which are binary compatible with the existing fonts, i.e. the same) and of course also Windows fonts (Postscript fonts etc.). According to the Olivetti salesman, there should be no reason to use other fonts for Calamus, as the quality of Calamus fonts is better.

The ordinary SL version supports PostScript output through the Dataformer module. I don't know if the NT version will handle it directly, though.

A fast cheap close still needs a 486, 16 MB RAM and a reasonable harddisk. Windows NT is not exactly a home computer operating system either. It _is_ expensive. Of course, with NT you _have_ to buy the SL-version, which is much more expensive than Calamus 1.09N.

Using Calamus for private or semi-professional work a Mega and Calamus 1.09N will do a good job. If Atari wants to keep the professional DtP-users, they have to do something fast. But they might not be interested in the high end market right now. :-)

From: anisko@usdtsg.DaytonOH.NCR.COM
Message-ID: <1524@usdtsg.DaytonOH.NCR.COM>
Source record: 199178

Well, folks, just to let you know, regarding my quest (quest?) for information on treating the modem port as STDIN, I missed one of the obvious concepts - input redirection! I had been doing *output* redirection so I could see the results of the commands I entered, but didn't think of the input. Under CoShy (ConNect's) script language, I had originally been doing this:

```
get a
eval "$a >/dev/aux"
```

This would get an input ("a") and would run (eval) it, sending the output to the modem. However, if the program was awaiting a keypress, I was out of luck.

Now when I did the following:

```
get a
eval "$a </dev/aux >/dev/aux"
```

this time it still sent the output to the modem like before, but now the input *for that command* is now coming from the modem (I stress *that command* because it doesn't lock out the keyboard at home, which "CON=/dev/aux" had). So now, if the program is awaiting a keypress or any series of keypresses (i.e. an editor) it works.

Under this new setup, I have successfully run LHARC.TTP (without arguments, where it waits for a keypress), VI.TTP (the emulation for this version of VI was a little off, but basically it worked), ARC, ZIP, ZOO, CAT, LS, and did get TCShell to run (though exiting TCShell did cause a snafu, which I am looking into). And as soon as I set it back up again, I'm going to test doing an XYZ.TTP transfer back and forth. In any case, it is kinda cool to be able to do remote stuff like this (remember, only TOS/TTP stuff will probably work). As a side note, you'd probably want to be in VT52 mode on the remote side as that is the internal Atari emulation (for certain programs, this may be necessary; for plain old command line stuff, it doesn't make a difference)...

As soon as I clean up my script file a little, I'll post the code (it's only like 20 lines or so).

Anyways, thanks to everyone who's helped me out and made suggestions on getting me to this point (particularly those that pointed out the input redirection). It is great to see the people on the internet as helpful and friendly as they've been:

"yes, Virginia, there are helpful people on the internet, inbetwixt the usual flamefests and zealotry..."

Rob

...oh, it might be obvious that I'm running the system under MiNT
(i.e. the /dev/aux references). Under regular TOS, I'd imagine that
if you substituted AUX: for /dev/aux it should work the same way. Also,
under MiNT/MTOS, you could be more specific and use /dev/modem1 or /dev/modem2
etc. rather than /dev/aux - I dunno if this would matter - my assumption
(anyone?) is that AUX will refer to the modem port you have chosen as
the current one (the chosen one in the CoNnect window, for instance)...

>Thanks in advance.

CoNnect (2.20) supports 57,600 baud (actually goes up to 153,600 baud or so, assuming the computer can push the data that fast) - this is on the modem2/serial2 lines, though (i.e. if you're running a regular ST/e, it's probably a no go). This is a shareware program (and worth the registration IMHO)...

I believe that STalker might also support these higher baud rates as well (above 19200, anyways). This is a commercial program, BTW...

From: mkite@lincoln.gpsemi.com
Message-ID: <CFvDr4.GLA@bailgate.gpsemi.com>
Source record: 199173
Cross-posted to: comp.sys.atari.st,ccomp.sys.atari.st.tech

Hi again,

Following some advice from my last post - I got my Quantum drive installed inside my Mega STe. So, I stuck the Atari Hard Disk Utilities disk in the floppy drive and switched on. Initial memory checks over, the computer booted from the hard drive, not the floppy as the sheet of A4 with the adaptor kit said it should - much to my surprise ! The mechanism had previously been used (by me) with an external ICD adaptor and had been formatted with the ICD utilities, which seem to work fine as far as the internal adaptor from Atari is concerned.

The "hinstall.prg" says 'No Logical drive to install', "ahdi.prg" says 'Not bootloaded'. I'm not complaining 'cos apart from the fact that there is no ICD host adaptor present so the caching is disabled, all my files are readable etc., I just wondered if this is how it's supposed to be ?! I thought the ICD and Atari host adaptors were sort of incompatible (like - I've got five partitions on the 105 Mb drive ...) or have I missed something somewhere ?

Looking for information ...

The reorder function has been in NeoDesk for a long time, and it is very solid. The only likely explanations for a problem when using NeoDesk's reorder are: 1. Hard drive/media/OS failure that caused the directory to get munged, and just happened to occur when you were using NeoDesk (most likely). 2. Some sort of incompatible software running on your system at the same time, although I haven't seen anything yet which would have caused a reorder to get screwed up.

Reorder has been pretty heavily tested and used on just about any ST system imaginable.

That is probably the bitmap. There should be some palettes around, too,
somewhere, if it is a Spectrum 512/4096 picture.

Wow, Atari stock has just hit 10 5/8. One has to wonder, given their dire financial straits, how long they'll be able to resist the temptation to tap the equity market for more cash.

It looks like they're betting all the marbles on the jaguar. Perhaps, this will give them the kick in the pants that they need to force them to focus on their historical market, game consoles, instead of playing Don Quixote in the computer market.

Toodles,

Chris

1111. AtariUSER Magazine is Back!!??

Newsgroup: comp.sys.atari.st
Date: 1993-11-02 15:41:31 UTC
From: L676791@LMSC5.IS.LMSC.LOCKHEED.COM
Message-ID: <93306.27691.L676791@LMSC5.IS.LMSC.LOCKHEED.COM>
Source record: 199186

In my mail yesterday was an incredible sight . . . 11 months after it ceased publication, AtariUSER Magazine is back in business, and has published an October, 1993 issue. They claim they are back in business, depending on market conditions.
Equally incredible is this morning's newspaper business page - Atari Corp. (ATC on the American Exchange) jumped 1-1/2 yesterday to close at 10, third most active on the AMEX. I made a few bucks off of Atari stock earlier this year when it was trading at around 2 and then jumped to 5, so I can't complain, but when I think about how it was trading at fifty cents last Spring, I can only say "Arrrrgh!" Oh well, never look back. Who could have predicted that the stock of this money losing company would go up like this? Is all of this over the Jaguar?
Finally, what gives with this rumor about Atari abandoning computers????
:-) --Mark van Wyk

1112. Educational programs: Latin, Geography, Typewriting

DOWNLOADING FILES, Instructions:
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once. i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having to reply "y" for each file
when asked "get {filename}?".
12) close [CR] to end (go back to ftp and
13) quit [CR] to go back to UNIX or.......
14 bye [CR] to end and go back to UNIX

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on which the programs
were intended, or in UNIX ....
- uncompress filename.Z [CR] if ".Z" file
- uudecode filename.uu [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate uncompress program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...)
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an
other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.
- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")
- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer.
i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

([CR] means "carriage return" or the "return" key!)

1114. Frontier is it coming

Newsgroup: comp.sys.atari.st

Is there anyway of knowing if FRONTIER is coming out on the st as the ads say
it is but no one else knows.
Can anyone tell me if its or is it another game promised to us but shelved due
to poor sighted software houses (BIRDS OF PREY for example).

Cheers
Philip

: my friend in Paris. Any one know where I can get this program?

In the UK, the program is distributed by the famed ST Club. They sell
three versions - Redacteur, Redacteur Jnr., and Redacteur Lite, as well as
a 75p Demo Disk. Although this will obviously be the English Version, I
know that it comes with French Spellchecker. The Club may also have a
French Version, or be able to tell you where to obtain one from.]

I do not know whether they have an E-mail address, but their land address
is:-
The ST Club,
2 Broadway,
Nottingham,
NG1 1PS.
ENGLAND. Tel. +44 602 410241.

My Single Sided Internal Drive has just bitten the dust. I have my own reasons for wanting one as well as my autobooting external and 40 Meg Hard Disk.
Anyway, if you have been putting off upgrading to DS, now is your chance to turn that old redundant drive into CASH.

I am offering 10 UK pounds including P&P to anyone who can supply me with one of these, which MUST BE IN PERFECT WORKING ORDER.

Contact me via E-mail. You would preferably be in the UK, or at the very worst, the EC.

OK well, I'm looking for Scheme for the Atari ST. I do not know the difference between xscheme andscheme. Does anyone know? According the 'Atari Welcome' on the internet, it said that xScheme and Scheme were both available on Umich. I can not find it in the Languages section, I do see Xscheme, but as I said. There IS supposed to be Scheme... ANyone?

1121. STalker problems

Newsgroup: comp.sys.atari.st
Date: 1993-11-02 18:51:22 UTC
From: ehood@convex.com
Message-ID: <1993Nov2.185122.28781@news.eng.convex.com>
Source record: 199194
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I've discovered a problem with STalker line history scrollback buffer. Anytime I call 'tset' on a Unix system, STalker will no longer save any lines in the scrollback buffer.

Also, I've noticed that STalker has the occasion to lose a character or 2. Also, I cannot figure out how to get a 80x24 character window on a 640x400 display using the default system font (Using a smaller font is too much of an I strain). STalker only allows me to resize to 80x23.

Personally, I think Uniterm is more robust (and faster), but it will not run on a Moniterm Viking. Plus, it cannot run as a desk accessory like STalker.

Has anyone else had these problems?

What software is out there that will let me load more than 6
desk accessories? I tried using DC Stuffer, but it seems to
srew up the system path and NeoDesk will fail in it's auto
execution.

I'd like something that is robust and is proven to work on
non-standard ST displays (i.e. 3rd party graphic boards).

Xscheme is an object oriented extension to scheme. I don't know much about it, though.

Scm is a Revised^4 compatible Scheme with extensions. The source, with a (pretty much) appropriate makefile for the ST's, is available from any major Scheme site, like altdorf.ai.mit.edu. I've compiled it and it seems to work, although I'm not 100% sure of the port...

There are a few ftp sites that have the scm binaries, but as far as I can tell they're all old. I can put binaries for the latest version on atari.archive sometime...

Source record: 199103

OK, I'm thinking of buying a Pascal compiler for my ST, and I'm wondering which is the best...I want Turbo Pascal compatibility, so AFAIK I have to get either HighSpeed or Pure Pascal. There's a big price difference, but do the features make up for it? Does Pure Pascal have the same relation to Turbo Pascal as Pure C does to Turbo C i.e. the same product, just from different companies?

Can I take Turbo 7 source and compile it directly under Pure Pascal (assuming there is no machine specific code)? If a program uses the Borland interface, will it come out as GEM under Pure Pascal?

Thanks....

THeo

Try turning on font width tables. But before you do, enable only the fonts
you want to use or it will take forever to load the program...

W>is 32k exactly?
Funny that they are all over 32000 (by the way 32k is 32768...) -> but
IMHO the colour palette has to be stored somewhere....

But I think *.PIC is just a format for monochrome 640x400 pix that just
mirrors the screen to disk and "forgets" the palette -> there is no
palette in monochrome...

>How many new users will plump for a MSTE/TT plus Calamus when they can
>get a fast cheap clone plus the Windows version of Calamus.
>And all their exisitng work is transferable as well !

Hey, read carefully!

Calamus has been ported to Windows _NT_, not Windows!

That means, you'll have to get at least a 486/66 with cache controller,
fast graphics board and real big RAM and HD sizes to be faster than on the
TT.
And that'll be no cheaper.

DMC intends to make Calamus available on RISC machines running Windows NT,
that's why they called it Calamus R. The Intel platform Calamus is just an
accident :-)

bye, Peter

As it was expained to me, Atari has stopped building the Falcon because they wre only building it on a need/order. Also, the stock was hovering at 8 points until AFTER they made the announcement on Friday. It was lsat at 10 3/8 last I checked.

-Mark Santora

BTW, I am not an anti-atari man as many have flamed me due to my bringing this information out. I own 3 ST's and really don't enjoy the idea of support being dropped for my favorite machine.

Atari have given up on manufacturing PC compatibles long ago. It would be very silly for a company that specialises in designing products and has no manufacturing capabilities, to drop designing new hardware and start manufacturing PC compatibles. Especially when the market is over-saturated as it is.

It's probaly a brand new type, called the 'Beilstein' virus. It was discovered mid 1993 and is a third generation MS-DOS mimic virus, i.e it places itself on a disk and disguises itself as an innocent MS-DOS bootsector formatted under TOS 1.04 or higher on the ST or MS-DOS on a PC. In fact; it can exist in a total of _650.000_ versions! Each version doing the same thing but looking completely different.
(information taken from UVK Atari Virus Bulletin)

You'll need UVK 5.9 to recognize it! Get the upgrade!!

Try MultiDesk Delux, from Codeheads (Charles F. Johnson.)

CodeHead Software
P.O. Box 74090
Los Angeles CA 90004
(213) 386-5735

A lot of people do not like Codeheads for various reasons, but this
program is very nice. You can load or dump .ACCs at will, and you're
confined only by memory. Plus there are other goodies.

: desk accessories? I tried using DC Stuffer, but it seems to

The software I know of to allow more than 6 DA's in at once are DC Stuffer (as you have already mentioned), MULTIDESK (DELUXE) by Charles F. Johnsson (codehead software?).

In my opinion, Atari's answer to the 6 DA limit was to ignore them, and instead turn to CPX's. I think that they are now widely abused. The Control Panel should be used for control, surely?

The other alternative is Chameleon. Whilst it does not allow more than 6 DA's in at once, it allows you to load and unload accessories into the space it occupies, solving most problems of the 6 DA limit.

One thing to watch when using Chameleon on older TOS versions (pre 1.4 I think) is that when you chameleon something in whilst in an application, quitting the application will not give you back its memory until you chameleon the accessory out again. Similarly, when you chameleon something in whilst on the desktop, then run an application, dechameleoning the accessory will not give the ST back that memory until the application is terminated.

Could anyone tell me where I can get hold of non-commercial mailer programs for my ST/e bbs system (TripLinK!) I have a fairly new Binkley, but it has no docs, so either an archive of binkley or others would be much appreciated (even just Bink's docs would be pretty cool!)

[an ftp address would be GREAT if possible]

Thanx, Andy

Anybody in Atariland gotten WordPerfect 4.1 to work on a Falcon. I saw
a list that had WP on the "It Works" column, but my efforts have failed
miserably.

Something about the test machine that was used by the person who made the
list had TOS v4.01 in it?

As the 2nd imagination-free person to flame that post... Are you guys
so thick as to not be able to come up with this line of reasoning:

PowerPC is a set of _chips_; computers, PDAs, cars, etc will use them.
Millions of machines will be built using PowerPC chips.

Jaguar is a games console; Atari would die of shock if the sold a
million of them.

Sheesh.

STalker 3 is a full-featured GEM comms program that, when run as an ACC,
do zmodem in the background, quite well...

Or run MiNT and run rz in the background (btw, has anyone seen rz
sources that are easy to compile under MiNT?)...

IMHO, you should be soundly flamed for voicing such blasphemous
thoughts...

MiNT has library support - you can write programs to take advantage of
named pipes, shared memory, installable filesystems, installable
devices, etc, etc, etc.

MiNT has source code available - if something is broken, you can fix it.

MiNT is being actively supported by dozens of competent hackers, not
just one person or a couple of people.

MiNT has a zillion handy unix tools ported to it... a lo and behold, due
to the power of the MiNT library, most even work properly under TOS!

At any rate, you have to compile scm using the MiNTLibs. If you don't
the program may crash later.

Personally, I prefer scm because it is MUCH faster than XSCHEME.

> color dithered picture is indistinguishable from the 256 color version, just as
> 640x480x256 color is virtually indistinguishable from TC.
> (Honest... I've seen it with my own eyes)

What's the scan rate? If it's not at least 72Hz and non-interlaced, I
really don't want to be staring at it for too long. That might be fine
for looking at pictures, but not for working...

I'm sure Blow Up allows somewhere around the same rate, but with
Screenblaster I can get 640x480x256 at 77Hz, and larger screens like
800x600 somewhere around 62Hz (which I myself find comforatable even
for long sessions).

I think 1280x960x16 would be great for X-windows, but I'd need a
larger monitor than the 14" one I have now.

For sale, Microvitec CUB COLOUR MONITOR.

I can supply the relevant cable to attach it to any Atari,
Commodore, PC etc etc. Will connect to most computers. RGB
analogue or TTL. Good picture, I use one myself and
I've got one spare.

If you want to use it with CUBASE or similar high resolution
software, I can supply a Public Domain mono emulator accessory
that gives you a very useable picture on a colour monitor.

If you play a lot of games, a monitor like this could
definately help improve the health of your poor eyes...

Delivery within a reasonable radius of Peckham or Ladbroke Grove
can be arranged free of charge.

50 pounds, including cable and
delivery, or nearest offer.

Now you can't say fairer than that, can you.

Leave a message on 081-693-2846 and Ill get back to you
as soon as possible.....

I recommend Geneva if you want to abolish the six accessory limit. Geneva
is very compatible. It not only allows you to have as many desk accessories
as your memory will allow, but alllows you to terminate or load them at any
time. (Note that some desk accessories don't get along well with being
terminated, but most do.) Plus you get all of the other advantages of Geneva
like multitasking GEM applications, a new item selector, a whole new look
including 3D buttons for ANY Atari, and much more.

I think Atari DID used to make some PC-clones, but I don't believe they were ever released in the U.S. (for some reason, I'm thinking they were in Canada, though). The problem with clone-making is that there are quite a lot of competitors doing clones, and thus the profit margins are getting hurt - and you need half-decent profit per unit, or the reasons to produce the product become less convincing...

>year when it was trading at around 2 and then jumped to 5, so I can't complain,
>but when I think about how it was trading at fifty cents last Spring, I can
>only say "Arrrrgh!" Oh well, never look back.

I think there are a number of others on this newsgroup with similar
sentiments :-O I got in a little after you (around 2 1/2 or so) and
basically am just having fun "letting it ride" (basically, I just
"wrote off" (not tax-wise, just reality-wise) the cost of ths shares
and am just gonna let it ride, just for the heck of it. I figure,
I had been following Atari's stock for awhile before I finally bought
some, so I figured as long as I'm checking out their prices, I might
as well have an actual reason to :-) Besides, I figure I had
"invested" tons of money in Atari products (from the 2600 on up) so
this seemed like the logical next step (uh, sorry about the pun)...

>Who could have predicted that
>the stock of this money losing company would go up like this? Is all of this
>over the Jaguar?

Check out the latest AEO. I believe there is an article about some
kind of stock "technical analysis" that seems to be pointing out why
Atari's stock is moving as it is, even without major "news" announcements.
However, I think Atari is going to official "release" (or something
like that) the Jaguar tomorrow (I believe Bob Brodie will be online
on GEnie for a RTC tomorrow night, if anyone's interested). It will be
interesting to see how the stock goes once the Jaguar gets out the
door... (on a related? note, I believe IBM also got some kind of
good rating or something yesterday, and their stock also rose - wonder
if the Jaguar production had anything to do with it?)...

>Finally, what gives with this rumor about Atari abandoning computers????

Based on the post, someone said that his broker gave him some "news"
about Atari abandoning its computers. I dunno, I've always been
weary about letting my money be handled by someone with the

word "broke" it their title ;-)

Rob

I normally send a Bankers Draft or local currency travellers cheques. When
sending payment to the US I use an International Money Order.

All you need to do is wander into your bank and with the other persons
address/bank account details, ask them the best way to send the amount
required. Some ways arer cheaper for you, some are cheaper for the recipient.
Germany has wierd banks that charge for everything so it's very important to
ensure anything you send is in deutschmarks at least. Any further charges they
get when paying it in would be minimal.

> graft the GEM routines from Mutt onto it...

My, what a feat, let us know if you succeed. (Given the ... hmmm ... let's say adventurous structure of the ME sources, this might not be the easiest of all tasks - but by no means let that stop you.)

> Mutt's the 2nd fastest GEM
> text editor I've ever seen (Tempus is the only faster one).

Tempus is certainly faster, but can hardly be called an editor. :-)

> Is GNU EMACS "useful" on an ST? Can you do things like M-x compile with
> only 4M of RAM and GCC? I've always avoided learning GNU EMACS because
> I didn't think it'd be too handy on my ST

If you have learned the MicroEMACS and the Mutt editor, you are as close to the EMACS as you can probably get. Definitely pays off to be aquainted with it, if only for being able to judge what a good editor is and what not. :-)

> (MicroEMACS works really well,

I agree. Before the Mutt editor I used to have ME 3.11 all the time. It's really a nice editor, but not easy to debug. (Also, IMHO, the sources are not as easily expandable as the Mutt editor's - that's why Mike Brandt decided to write the GEM interface for the Mutt editor, not for the ME.) However, I still use the ME sometimes because of its better regular expression matching code (also for nostalgia), this being something where the Mutt editor lags behind (the vicissitudes of the editor world, I could go on for hours on that ...)

Don't get me wrong, I am a fan of atari, but I have always found TOS and sometimes to ST hardware also to be extremely flaky. (I have an 2M STe TOS 1.62)

When a PC fails, it does so in a predictable manner for usually sensible reasons (incorrect setup, hardware failure) and the failure is then repeatable.

My TOS crashed far more often (2,3 bombs half the time, 4,12,13 other times.) for usually no reason and completely unrepeatably. Can't wait till the Linux 680x0 kernel is finished (i'm going to have a look at it now, but don't know anything about programming the Falcon hardware so I can't write the required drivers to actually run it (if there is a register list for ftp anyware or someone doesn't mind writing basic instructions for direct video and disk access I'd be very interested to hear)) Whats more I know someone with a Falcon, and that seems to have the same problems.

You would have thought by now Atari could have got a STABLE os together. MS-DOS may not be state of the art, but at least now it can cope with most things reliably.

One question: I was muckin' around with an OS on my STe, and had problems switching resolution and screen address etc. Sometimes the new screen is offset (to the right I think) by a character (Looks like the vid chip is getting confused and losing or inserting a word of video data, or just getting the wrong screen address) MonST also has this problem and a few others have had it also - SO: why does it happen and how do I write programs that access the video directly (I used the same code as TOS at one point and still had the same problem) so this doesn't happen.
This doesn't happen on every resolution change though, about 1 in 3. See above.

I was frustrated by the less than full terminal (80x24) mode of Stalker until the beginning of last year, when I bought a TT. Everything works great in 640x480 with 16 colours.

I know that's not much help but it did solve my problem :)

But seriously, you may want to install the overscan modification into your ST, to increase your monochrome resolution. Some one else may be able to help you with how to get your hands on this modificaton.

Indeed? I know that there's a beta version of a CDROM XFS, but it's not
available to the public (except when you buy it from Color Concept).
MetaDOS 2.2 is free and works with TOS and Mag!X (note that Atari's
CDARGEN.BOS only works for TT-SCSI and the CDAR 504 and doesn't support
multisession).

>And another question is if we all want to work an a system like Mag!x
still
>in say 2 years. Only Atari has the power to introduce new features to the
OS.
>But this is vital because a system needs to be improved.

Indeed. But fact is, that MTOS development *currently* is too slow.

1184. British Falcon owners unite!

Newsgroup: comp.sys.atari.st
Date: 1993-11-03 21:25:41 UTC
From: whern@bnr.ca
Message-ID: <1993Nov3.212541.23954@bnr.ca>
Source record: 199009

Attention British Falcon owners!

Do you find it difficult to get support for your machine? Do you have no fellow owners to talk to and swap hints and information? If so then Falcon Fact File is the answer!

Falcon Fact File has been set up to help isolated Falcon owners get the help and support they need for their machine. FFF is a database of Falcon users, listing their machine configurations and interests. Subscribers can look for owners with similar machine setups or interests and then contact them to swap advice.

Registration with the FFF is free. Owners send in the completed application form along with a blank disk and a stamped addressed envelope. The disk will then be sent back to them containing the latest version of the FFF database along with as much Falcon PD software as space permits.

Copies of the application form can be obtained by writing to either

Kevin Beardsworth, Colin Fisher-McAllum
32, Chestnut Road, 11 Pound Meadow,
Fishtoft, The Green,
Boston, Whitchurch,
Lincolnshire PE21 0BU Hants. RG28 7LG

and enclosing a stamped addressed envelope.

FFF is a non-profit organisation. There is no charge for registration so it is important to remember to include stamp addressed envelopes when requesting either an application form or a copy of the database. Only FFF members will be given copies of the database - no commercial companies will be allowed access, nor will PD libraries be able to distribute it.

Falcon Fact File is a great way to make contact with other Falcon users. What have you got to lose by joining? Even if you don't make any new Falcon contacts, you'll at least get a free disk of PD software.

>User-September Issue which is a combination program. Help!!

If you wanted one shipped from the UK we would happily ship one to you in Australia (mail to hisoft@cix.compulink.co.uk), alternatively give Phil Reeves at Paragon Computers sorry I've not got address or number at home) a call since we ship product to him regularly (I hope I got name and company right there!).

(In case this makes no sense, I work for HiSoft in the UK who also own AVR, 2-Bit systems & Microdeal who were/are the suppliers of VideoMaster)

I have a stereo replay cartridge which is also exactly the same as a stereo playback cartridge when playing back samples.

Does anyone know of a .MOD player that will replay stereo on this cartridge. The only one I have come across is Audio Sculpture which costs around 50 pounds which is not worth it as i only wish to play mods.

The base address for the left channel of the cartridge is FA8000. Unsigned data should be sent out by adding the offset to the base address and reading from this memory address.

The right channel is at address FB8000 and is written in exactly the same way.

Please reply by email to

As the clueless poster of the original article, perhaps you can explain
why you persist in comparing a chipset with a game console in a newsgroup
devoted to neither? If that's your idea of "imagination", you may need a
dose of reality, or at least netiquette. What does ANY of this have to do
with ST/TT/Falcon computers? Your own reasoning suggests the Jaguar and
PowerPC have little relevance to each other; or are you so thick as to not
understand your own posts? Check your skull for inward bone growth, and
go sheesh yourself...

1194. printer problem with wordperfect...

Newsgroup: comp.sys.atari.st
Date: 1993-11-04 00:55:46 UTC
From: msteve@magnus.acs.ohio-state.edu
Message-ID: <2b9jui$3il@charm.magnus.acs.ohio-state.edu>
Source record: 199013

Well, I have a simple problem that anyone with any knowledge with the Star line of printers can handle. I would just like to know which printer driver would be best to use with my Star NP-10

Wordperfect gives me the following Star printers for use...

Star NB-15/NL-10/NX-10
NB-24-15
ND-15 (ibm mode)
Powertype
Radix/Gemini 10X/15X
SG-10/15
SR/SD -10/15

The manual is quite detailed for this printer alone, but I don't know which would do the best job. Anyone help will be appreciated, other than that I will need to go by trial and error...

They? You must mean share buyers (as Atari Corp isn't "betting" anything).

>Perhaps, this will give them the kick in the pants that they
>need to force them to focus on their historical market, game
>consoles, instead of playing Don Quixote in the computer market.

It's a LONG time since Atari really made game consoles. The 2600 was
no different to the VCS of 1979. Since then, they've made the Atari 400
series, which greatly extended up to the 130XE. Then the ST which extended
up to the TT030 and Falcon030. The LYNX is a bit like a game console, I
guess, and it has sold well.

Diversification is generally a Good Thing. Who knows: maybe if Atari
had never gotten into computers (in 1980 was it?), they wouldn't even
BE here today to produce the Jaguar.

Was Nintendo around when Atari produced Pong? I think not.

Atari is the ultimate surviver. One way or another, it will pull
through its problems (yet again), despite all the dire predictions
by people like Peter ZX80. Sure, it might be the Jaguar that gives
them the new foot-hold. But Atari has one of the longest upgrade
paths in existence in the minds of children. They can buy a LYNX,
then a Jag, then a Falcon. Name recognition is very important.

John, I'm loathe to disagree, but PC's lock up all the time and
absolutely no apparent reason. During the day one of my tasks is to
NetAdmin our 20-node Novell Network at work, trust me that many of those
machines lock up and you can't do anything but reboot and hope for the
best. Especially under windows..At least on my ST it only gets tricky
when I start mixing an matching patches and "non-standard" software.

IMHO, /all/ of the current crop of ST/TT/Falcon word processors are severly lacking, even compared to something as feature-free as Microsoft Word for Windoze 1.0.

Papyrus looks promissing, though I hope they have an English version planned/available (my German is nonexistance).

Calligrapher Pro is another one that people like, though the interface annoyed me a great deal, and I wasn't too thrilled with yet another word processor using proprietary fonts... If only Speedo had been released a few years ago... Calligrapher also produces bad PostScript output, which is something to consider if you have access to a PostScript printer (through work or a friend).

Word Flair II, That's Write, AtariWorks, etc are also ok; I doubt you could use AtariWorks (which inclues a database and a spreadsheet) and SpeedoGDOS (scalable fonts! wahoo!) in 1M though. SpeedoGDOS is another thing that doesn't work with PostScript printers; a rather serious omission, IMHO.

When I'm not writing text in MicroEMACS, I usually use WordWriter II (still!); word processors with online thesauruses (thesauri?) seem rare on the ST (AtariWorks is the only other one I can think of; Calligrapher probably has one though).

(Hey, folks! I didn't even rant and rave about SpeedoGDOS vs Adobe Type Manager! :-)

> I still think its better than WOrd Writer..

Blasphemy! WordWriter II RULEZ D00D!!!!!

ahem Sorry.

Really, WordWriter II is great if you can live without certain things (like GDOS fonts, PostScript output, the fonts built into your printer, etc); I've written countless essays, scores of short stories, and part of a novel using WordWriter II. Literally the _only_ bug I've ever encountered in it wasn't even their fault (the Phantom Typist seems to strike more often in WW2 than in anything else, except for the GEM version of MicroEMACS 3.11, which experiences it after about 5-10 minutes of typing!).

One thing to keep in mind about WW2 is that it was designed when line printers (ie, 9-pin) were common; things like laser printers and inkjets were rare, expensive things. WordWriter II does a great job on a dot-matrix printer, and a not-bad job on my DeskJet 500, though I wish it could use the CG Times font built into my DJ instead of plain ol' Courier...

AND it's got a decent dictionary (if slow), AND a decent online thesaurus.

WordWriter II is probably the oldest piece of software on my hard drive; it takes a lickin' and keeps on ticken'.

Wow, that's good news! Does the VDI driver that comes with it take advantage of any of the accelerated features of the video card? For example, I imagine the card itself can draw a line/rectangle/filled rectangle/etc if given the appropriate commands (it probably does; Lexicor seems to think things through very well before releasing somethign)...

> >Anybody got a TT with 2M ST/16M TT RAM that they'd like to sell me

This is a response to the user who was trying to
format a disk to transfer info between an St and
a PC. (I'm new at this, and I'm only hopeful that
I'm managing to send this to the right "thread")

If you format the disk on the PC, the ST will
read it quite happily.

To make your PC think that it has a single-sided
drive, add the following to your CONFIG.SYS file:

device=\(your dos directory)\driver.sys /d:01 /h:1

This worked for me a few years ago when I had the
same problem. Hope it works for you too!

>profits report, or something like that?

Well, I dunno if this *directly* is the reason or not, but
Atari does have a new 64-bit video game system called the Jaguar
which will be released in certain cities at the end of this
year, and nationwide next year. I believe the official "release"
is tomorrow, but I'm not sure.

Anyways, a 64bit system (being built in the U.S. by IBM, no less)
running around $250 (additional CDROM extra) is a pretty amazing thing.
I believe a few of the chips (graphics?) are RISC...

I would not be surprised if Atari did stop manufacturing the Falcon. The
Falcon has been a bomb sales wise. Remember Atari had a 6 million in sales
last quarter.

I have an Atari 520st, but i need a terminal emulator with vt100
emulation. I ftped Uniterm from clausthal, but I have no way to download it
from my school's unix server. i am currently using the harlekin desktop
utility emulator, but it only supports xmodem. My school only supports Kermit
(and no, Zmodem isn't installed). I've tried Capturing the files and editing
out the garbage with a hex editor, but this doesn't work. If anybody has any
suggestions, please post or email me at rbrand1@gl.umbc.edu

I am now using Gribnif's Geneva. I can load as many accessories as my 4 megs will allow, and remove them at will. If I terminate programs (accs) in reverse order, the memory is freed up (not fragmented). It's great to run STalker, STFax, Maxifile, XCONTROL, Idle (screen saver), G-Plus+ (acc), and still be able to load EdHack or something else, use it, and terminate it.
You don't have to rename your accs either; they will load as .ACC or .ACX, and you can put the ones you want at boot up in a seperate folder, and set a PATH= in Geneva.

...it kind of makes you wonder _why_ we are all just sitting around
picking our noses when we can be making tons of money....We (the atari
community) all knew that Atari stock would do nothing but rise....the
company had about $60 million saved up last year, and for what? To push
a major computer (Falcon030) and a game machine! With $60 million saved,
we all saw something like this comming......sigh......Oh well. You win
some, you loose some.....I lost....and Atari stock is going to continue
to rise rise rise....while I continue to sit sit sit...

Congratulations Atari and you people who have made out with some serious
money. Go Atari!!!

If you have uudecode on your Atari, you could uuencode the file, download it
as text and uudecode it on the Atari. Another possibility would be to get
xmodem for Unix somewhere and compile it on your server.
Otherwise you probably would have to get one of these programs from a friend
on disk. (One of these programs: uudecode/Uniterm/Kermit).

[> file transfer...preferrebly zmodem or ymodem batch...

CoNnect does this; if you are using a reular TOS, then you can use your
accessories while downloading. If you have MultiTOS, you can do
anything you want while it is downloading. It does Zmodem, Ymodem,
Xmodem, Compuserve B/B+, and has a host of options. Of course, it ALSO
does everything else you can image (emulations, scripts, sounds, and it
has the best dialer I have ever seen).

It is Shareware, and available from atari.archive.umich.edu in the
Telecomm directory. The current version is 2.20 (but you need the
2.10 version as well since the 2.20 version contains only the updated
files).

1215. Looking for QWK offline newsreaders

Newsgroup: comp.sys.atari.st
Date: 1993-11-04 08:48:13 UTC
From: a09651@giant.rsoft.bc.ca
Message-ID: <a09651.752402893@giant>
Source record: 199031

A friend of mine has asked me to look around on the net for recommendations about QWK offline message readers for the ST. Does anyone know of any such beasts they'd be willing to recommend?

Thus far I've managed to find only two: Mountain QWK and Captain's QWK. I've heard rumours about one called "Maximiser" or somesuch, but are there others out there? He's not terribly concerned whether these products are public domain, shareware, or commercial, but as he intends to get a good deal of use out of it, he's looking for something that works well.

If any of you could suggest a program to look for (and perhaps tell me where it can be found, if it's available by ftp and such), I'd be most grateful.

> French Version, or be able to tell you where to obtain one from.]

I would give a restrained warning to anyone thinking of buying Redacteur. I brought it (full version) a week ago and I found it had so many bugs in it, it was unusable. I'm contacting the ST club today to sort out returning it and getting a refund. Shame, because it's fast and has all the features I need. It just doesn't work properly. BTW, printing is slower than GDOS in graphics mode!

As for the demo version - you must state whether you want the colour or mono version. You need another PD disk if you want to print to anything other than a 9 pin Epson in text mode - the printer driving program is not on the demo disk. The main program (full version) comes with both French and English dictionarys, plus font editor, database handler and a host of other useful utilities. It's a really good deal, if you can get it to work.

I say restrained warning here because I have not had chance to contact the ST Club to get some help, though what help they can offer concerning "Internal Error" dialogs is not clear. I don't expect a handful of workarounds for a 100 quid package.

No. Flopticals are SCSI drives, no disk drives. They are handled
completely different from a hardware programmer's point of view.

1223. SLIP with Atari Mega ST?

Newsgroup: comp.sys.atari.st
Date: 1993-11-04 11:38:59 UTC
From: bmhahn@poseidon.knoware.nl
Message-ID: <CFytp0.Ano@knoware.nl>
Source record: 199044

Hi,

sorry if this is a FAQ, I'm posting this for a friend who has a Mega ST-4
and a ZyXEL Modem.

Is it possible to set up a Full-Access Dialup Connection with SLIP or PPP
to the Internet with the above equipment, or is terminal emulation the
best I can get?

If a Full-Access Dialup Connection is possible, are there any graphical
NewsReaders and Mail programs like on Mac or NeXT?

Thanks for your help,

Bernhard

CURVING TEXT
I would very much like to be able to fit text to shapes... at the very
least to a circle.
Either I need a tool to support a graphics package or dtp
Or one of these which can cope with the problem.

So......
Is there something available over the network or am I going to have to spend
my hard earned?
Please post your thoughts on this ..... I will be very pleased to see any
replies/postings and I am sure others will be interested as well.

Certainly you can get 640*480 in TC, but with 23.5Khz, that is under 31.5Khz(VGA)
and higher than 15.625kHz(TV), just some old Multisyncs can display this (range
15.6 to 38kHz, NEC3d etc.)
|> The problem is that VGA has a set sync rate. 640x480x65536 could be done
|> a number of ways on a multisync. The two obvious being:
|>
|> 1. 640x480x65536 at less than 60Hz.
|> 2. 640x480x65536 interlaced at >60Hz.
You can forget the frame rate, the real important figure is the horizontal
frequency, it decides if you can see the picture or your monitor goes up in
flames...
|> 640x480x65536@60Hz it the problem. 640x480x65536 interlaced at 80Hz would
|> be visually ok, I would imagine. Anyway, that's for BlowUP, etc.
640*480 has about 90Hz interlaced. The source of all the TC-problems on the F030
is the video bus rate (about 30Mbyte/s), so the max. pixel clock for TC is
16-17Mhz and not >32 Mhz (2-256 colours), you can calculate the rest:
17e6/(640+80(border pixel))=23.6kHz, 23.6kHz/((480/2)+20(border lines))=91Hz
interlaced...

>
>It's a LONG time since Atari really made game consoles. The 2600 was
>no different to the VCS of 1979.

I thought the names were synonymous. Or are you talking the
difference between the 2600 (with 6 "levers"), the 2600 (with 4 "levels")
or the 2600jr (that tiny console they came out with later)? BTW
by "levers" I mean the "switches" on the console to choose between
game numbers (i.e. games 1-30? on Space Invaders)...

>Since then, they've made the Atari 400
>series, which greatly extended up to the 130XE. Then the ST which extended
>up to the TT030 and Falcon030. The LYNX is a bit like a game console, I
>guess, and it has sold well.

Don't forget the 5200 (which was essentially an 8-bit computer,
with a funky-sized cartridges and a digital joystick) - had some nice
games, but came out when the video game industry "crashed"...

And then there was the 7800, which had VERY nice graphics, etc,
but didn't seem to get pushed too much...

Assuming Atari doesn't drop the ball on the Jaguar, this should
prove their biggest video game console since the 2600 (didn't EVERYONE
own one back then? :-)

>Diversification is generally a Good Thing. Who knows: maybe if Atari
>had never gotten into computers (in 1980 was it?), they wouldn't even
>BE here today to produce the Jaguar.

And we wouldn't be here talking about Ataris either. I think
computers got them through the years after the video game industry
crash. Besides, the link between video games and computers for
Atari is very deep - I mean, how many current ST owners who were 8-bit
owners bought an 8-bit because of STAR RAIDERS? That was what got
me initially interested in their computers...

>Was Nintendo around when Atari produced Pong? I think not.

Nope. Hmm, got the ol' memory working now... I think when the
2600 came out, the two competitors I can think of were the Odessy (sp?)
and Intellivision...

>Atari is the ultimate surviver. One way or another, it will pull
>through its problems (yet again), despite all the dire predictions
>by people like Peter ZX80.

Atari does seem like Jason from the "Friday the 13th" movies, doesn't it? The camp counselors and campers couldn't kill it, and neither could the movie critics ;-)

>Sure, it might be the Jaguar that gives
>them the new foot-hold. But Atari has one of the longest upgrade
>paths in existence in the minds of children. They can buy a LYNX,
>then a Jag, then a Falcon. Name recognition is very important.

If they play their cards right, they could borrow a page out of Nintendo's gameplan - release a version of a game for BOTH the Jaguar AND Lynx (like Nintendo does with the SNES and Gameboy).

>Welcome to the club. I have a lynx and it didn't go anywere. I have seen the
>future and its 3do!!!! The Jaguar will bomb just like the TT, Falcon and
>Lynx.

They have had a knack on advertising their video game systems in general,
though that never seemed to happen with their computers as much (maybe
the last "high profile" ad was the old Alan Alda 8-bit stuff).
For instance, the Lynx ads that MTV ran (perfect audience - hmm,
advertise to the "Beavis and Butthead crowd" - there's an idea :-)
I noticed you didn't mention the ST in your list of "bombs" -
does this mean you feel the ST has thus been a success? Gee,
a kindler and gentler soul ;-)

If the 3DO sold for $250, it'd probably be a hit. Are you telling
me you'd spend $700 to get a video game console rather than a bright
new shiny MACintosh? Even *I* would buy a MAC before a 3DO, if
those were the only choices I had at that price range.

Can you plase tell me where you can find Audio Sculpture?

I am a member of Sync/Synchron Assembly, though not one of the authors (they might read this, and respond), they were frauded by the french company who where supposed to sell it ... in other words, the authours of Audio Sculpture aren't receiving any money at all for the product.

Email dt93tn@pt.hk-r.se to reach Tore Nestenius,
or bengtus_sjolen@troed.ct.se to reach Bengt Sjolen.

They might have some interesting news for you .. ;)

Audio Sculpture is the best tracker ever written for the ST/STE, too bad Synchron Assembly got frauded this way ..

Windows is now VERY robust - I have difficulty crashing it if I try. Even if a dodgy program fails, the system will stay up. On the Falcon (which has hardware memory protection) a buggy program can still bring the OS down which is unacceptable for me. And my STe still crashes far too much: on loading auto programs, on running other programs (that bug that stops you executing a program by double clicking from the desktop directly (the OS will not recognise it as a program and ask if you want to show/print it) but will let you select it and then double click to run is completely strange and a real pain) during compilations etc... (usually not while doing ' simple' thing like editing a file).
The overall impression I get is that TOS is inconsistant. There are features about TOS and the ST hardware which start off looking good but after any time using them you realise Atari haven't taken them far enough, squashed enough bugs out, or have implemented them in a most cretinous, difficult to manipulate way.
I think Mac's hardware is more dodgy, (I've seen one systems SCSI interface need repair 3 times in a couple of weeks - devices just kept blowing each other up) and they are forced to do everything slower than it needs to be done by virtue of the OS, but they just handle so nicely when they're running.
Likewise the PC - it may have useless hardware (unless you can pay for 3rd party upgrades) a horrible CPU architecture to program in, but overall it seems to be very stable (I've used Novel on an 18 node net and here at uni on a net several times larger). The net works, MS-DOS works (V6) Windows is armour plated (V3.1, I know 3.0 was easier to crash but even then you could usually say 'This bit of software did it when I tried to do x') and the number of times I've crashed a PC here must be in single figures.
Ideally I'd use a unix system all the time though. They've never given me undue hassle or looked as if they could do something and then crashed when I tried it.

ahh. so Darek's Gemulator has finally taken it's toll!!!!! :-)

Computer Motto of the 90's: "a Gemulator on every desktop"

(hey, much more catchy than the 80's motto from the mouth of bill shatner:
"the vic 20: the wonder computer of the 1980's")

btw: anyone have any concrete sales figures as to how many Falcon's are in
the hands people in the world?? any big name software houses doing any
software development for it??

1242. Magix versus Multitos

Newsgroup: comp.sys.atari.st
Date: 1993-11-04 15:39:26 UTC
From: bunka@mibm.ruf.uni-freiburg.de
Message-ID: <2bb7ne$7c8@sun8.ruf.uni-freiburg.de>
Source record: 199062

Hi, Chris

>MiNT has library support

that's right but Magix includes also a library for programmers

>there are a lot of hackers who support MiNT, the source code is available,
you can install additional devices

that's right too, but you still have to weigh advantages and disadvantages
of both systems. For C-programmers MiNT has certain advantages. But if
you are a pure user like me you think that it is important that

a) the system runs quite stable (Magix does so, MiNT doesn't)

b) you are able to run singletasking programs since you don't want to
miss your favourite program under the new TOS. You don't want to
wait until your singletasking program is multitaskable. Maybe your
favourite program is PD and is not being further developed. So what
do you do ?

c) you are not wasting time. Magix is definitely faster and furthermore
you don't have to waste time in improving MiNT which is actually not
your task but the programmer's. You are free to do so but in this case
your spending time on something which is getting a purpose of itself.
You want to use your computer to make your life easier - now it's getting
harder since you are spending time on something what you wouldn't do
if you hadn't a computer.

Just because everybody is using MiNT you think it would be better to use it ?
OK in this case I would have to sell my Atari since actually almost every-
body is using DOS-PCs. But I don't because I love the advantages of my
Atari and don't want to miss them so I stick to my ST. I also love the
advantages of Magix.

At the moment I have installed 4 OSsytems on my ST. These are Gemini,
MiNT, Magix& Ease and just Ease. Since I have Magix I have never ever used
MiNT once again, Gemini once or twice and Magix and Ease all the time.
It's also a question of testing and experiencing the systems. If you like
UNIX-shells on a single-user computer stick to MiNT, if you want to work
seriously with your system, try Magix.

Andreas

|> Please inform me.
I'd have thought that with Macs being so cheap these days (Hi Peter), it wouldn't be worth anyones time developing one. The only thing is if Dave Small modified his one but at his usual rate of output you wouldn't see one for some time.

I think that this is just hilarious! My broker would have called me too and
I had no such call. Also, if it was a major announcement it would have shown
up in Compuserves ENS (Exec. News Service)--and it didn't. Also, would Ataris
stock risen to over $10 if this was announced--I don't think so...

I have a problem with my SLM605 laser (on the ACSI bus)

Usually it's not plugged in (actually it unplugs it self
when turned off - smart little fix inside the controller)

When I plug it in it doesn't register until I reset my ST

Is there another way to make it active without rebooting
(a small routine to reset all ACSI devices or somthing like
that - a copy of the routine called when the ST reboots ?)

Dear Mr Sinclair,

I am showing you some respect here, and I feel you will do the same.

PLEASE do not carry on with this flame war. It is not worth it. Us Atari users will stick with what we like, until we feel for ourselves that it might not be worth it.....not because some Mac/PC user says so.

I use suns running X windows, and I like the platform. However, I still would not trade in my Atari for one. I would buy one seperately, and keep both machines.

All computers have their own merits, and it is wrong to cause a flame war about my computer is better than yours. There were a lot of reasons why I bought an ST instead of the others on the market, and I'm sure that a lot of other people had their reasons for buying their Ataris. If anyone wants to sell their Atari and buy another platform then that is up to them.

So please stop writing into an Atari enthusiasts newsgroup.

Thanks

If you can find it you may want to look at Prospero Pascal as well. It will be ANSI compliant and come with GEM libraries/support. I have their C and Fortran compilers and they have a pretty good development environment as well as the ability to link modules from between the different languages.

This morning's (11-4-93) San Jose Mercury-News had a major article about Atari and the Jaguar rollout in the business section, and amazingly, a color "teaser" about the article on the front page of the newspaper. Nothing new in the article, except a quote from Sam Tramiel admitting that Atari has focused all of its efforts on the Jaguar and that ". . . Atari won't have any cushion if Jaguar is a bust."
No, I can't display the text of the article electronically, and I'm not about to re-type it, either. Go to your local library if you're interested. :-)

Hints from Emily Postnews
==========

(Thanks to John Henders (jhenders@jonh.wimsey.bc.ca) for this bit of _humor_.)

Emily Postnews Visits comp.sys.atari.st

(Due to popular demand, (well at least one persone asked anyways), Emily has taken time out of her busy schedule to answer a few commonly asked questions specific to c.s.a.st.)

Dear Emily.
Some Amiga user is raving on c.s.a.st about how wonderful
his computer is, and how awful mine is. What should I do?
signed My Computer is NOT a Toy.

Dear My Computer, etc,etc.
Many people's egos are so tied to their possessions, they
have to affirm their existance by raving about the superiority
of their machine to anyone who will listen. You should immediately
flame these people into cinders, using every rumour or misconception
you've ever heard about their brand of computer, as this will cause
lots of posts, and develop into a massive flame war, which is one
of the main reasons most people read c.s.a.st. If this didn't happen
every six months, everybody would unsubscibe to this newsgroups from
boredom.
Or, you could put comp.sys.amiga.advocacy in the Followup to:
line, and any article replying to yours would go to the newsgroup
designed for this discussion.
Or, if your newsreader supports it, you could build a KILL FILE,
which eliminates any post that has the word Amiga in it.

Kill files can be created in rn and trn by hitting the 'K' key.
This will make a kill file based on the article you were reading
at the time. Then control K will put that file in the editor for you
to play with. You use the same regexp commands here that are in rn.
For example. /[Ff]oo/h:j would search all headers of unread articles
for both Foo and foo, and junk them. Check the docs for your newsreader
for further details.

Dear Emily.
I like flame wars, and want to start one of my own, so my name
will be as famous as Richard Covert's.
Signed, Too much Time on My Hands.

Dear Too much time.
Sorry it took so long to reply, but Richard's in my kill file
and someone had to forward your post to me, or I'd never have seen it.

Flame wars are fun. They're the main reason people creted Usenet,
and should be encouraged at every opertunity.
Some of the most common tricks for starting flame wars are as
follows.
1: Post a note in another newsgroup telling all the users there that
they own a piece of junk, and if they had a half a brain, they'd have the
same computer you do, as it's obviously the best.
2: Toss a bit of slander against another computer in a totally
unrelated post. This guarantees a follow up, even if your original
post wasn't of any interest.
3: Create a signature file that has a put down of another computer
in it. This will get flame wars going in threads that have completely
unrelated Subject: lines, thus slipping through all but he most exacting
kill files.
I hope you find these tips handy in creating your next flame war.
And just remember, your computer MUST be the best, after all, it's yours.

Assembly Language Programming
Robert Arp
Disk archives, not published in paper at this time.

"It is an excellent guide to assembly languuage programming. It is very
large and takes quite a while to make a hard copy if you desire to do so.
The file names are arp68k-book.tar (the text) and arp68k-pix.Z.tar
(.img files to go along with the text)."

:DEV: 93.06.11
How do I become a developer for the Atari ST?
==========

Contact Bill Rehbok, (408)745-2022

[UNITED STATES ONLY. IF YOU LIVE OUTSIDE THE UNITED STATES, CONTACT
YOUR COUNTRY'S ATARI HEADQUARTERS FOR MORE INFORMATION.]

Bill can explain the program to you, and send an information packet if you
desire.

Atari has gone to a 2-tier developer membership. The 'higher quality'
developer support goes to commercial developers, and costs $250. The
'no-hand-holding, no announcement of company future products, no access
to discounted hardware' goes to noncommercial developers, at an initial cost
of $125, plus $50 renewal fee each year.

Both tiers receive the ST/TT Developer Kit and all developers have to fill
in an application form and a non-disclosure agreement. Contact Bill for

more information.

Atari is now selling the developer's kit (or parts of it) seperately. No project-in-development or non-disclosure agreement is necessary.

:ERR: ??.??.??
What does TOS ERROR nn mean?
What do the bombs on my screen mean?
==========

The information below was written, in part, by Darryl May, and posted on GEnie in January (of ????) by John Townsend. The original also appeared in the June 1988 issue of _Current Notes_ (122 N. Johnson Rd., Sterling, VA 22170). It has since found its way to me, and is being posted to comp.sys.atari.st as a service to readers.

Alan Pratt wrote to tell me that the basic information may be correct, but that it cannot be dubbed "official" unless it originates, on paper, from Atari. This makes sense, as electronic communications are easily modified, even accidentally.

Roland Waldi provided information regarding the difference between TOS and GEM return codes which appears to be correct. The tables have been modified to reflect his information.

The following is an unofficial list of the errors that can appear while you are operating your ST computer.

Error description return code alert box #
==========
OK (no error).....0
Fundamental error.....-1
Drive not ready.....-2
Unknown command.....-3
CRC error.....-4
Bad request.....-5
Seek error.....-6
Unknown media.....-7
Sector not found.....-8
No paper.....-9
Write fault.....-10
Read fault.....-11
General error.....-12
Write protect.....-13
Media change.....-14
Unknown device.....-15
Bad sectors on format.....-16
Insert other disk.....-17
Invalid function number.....-32.....1
File not found.....-33.....2
Path not found.....-34.....3
No handles left.....-35.....4

```
Access denied..................-36.............5
Invalid handle.................-37.............6
Insufficient memory............-39.............8
Invalid memory block address...-40.............9
Invalid drive specified........-46............15

No more files..................-49............18
Range error....................-64............33
Internal error.................-65............34
Invalid program load format....-66............35
```

The last code is the infamous "TOS error 35"!

Also, some unofficial information via Alan Pratt:

Notably, you should add -48: ENSAME (not the same drive, occurs when
you call Frename and the two names you give aren't on the same drive),
and -67: EGSBF: you can't use Mshrink to GROW a block of memory.

Those bombs that appear on your screen are error messages from
the 68000 micro-processor.

```
Number
Description of bombs

:FREE: ??.??.??
What is Free-Net and how can I get access?
==========

A "Remodeled" Atari S.I.G. Opens

By now many of you have heard of the Cleveland Freenet, or more specifically the Atari S.I.G. on the Cleveland Freenet. For those who haven't, the Cleveland Freenet is an experimental computer system providing free public community telecomputing. Basically, it's a lot like a public library of the future. Many of these systems are popping up all over the country. Don't be surprised if one pops up in your neighborhood in the future.

Recently the Atari SIG has undergone a significant face-lift. All the regular areas are intact including its news sections, user group newsletter, online magazine sections, general as well as specific computer discussion boards (8 bit, 16/32 bit, Lynx, Portfolio), and our weekly Sunday night multi-chat conference.

The conference starts at 8pm EST sharp and is on channel "+Ataricon". What the staff at the Atari SIG has added, has given the Atari SIG the potential to cover all grounds of Atari and its related products.

The most noticeable addition to the Atari SIG is the Programming and Development Forum. This forum is intended to be used by developers, professional programmers, and Atari hackers (the old definition of "hacker") as a means to share ideas, help each other out, and find out the latest technical information on Atari's products. This board is ran by newly acquired SIG Operator, Peter Haller, a professional programmer who is running developer sections on hardware and software development, programming, MIDI applications development, Graphics Design, plus many other sections that can definitely become a programmer and developer's dream come true!

Last, but definitely not least, the Atari SIG has a restructured Product Info and Support Board and a new Special Applications Board. The Support Board includes a vast library of support lists. These lists range anywhere from phone numbers of Atari dealers and producers, to software reviews for 8 bit, 16/32 bit, Lynx, and Portfolio software. To sum it all up this area covers what's out there, who makes it, and how to get it for all Atari products. The Special Applications Board is just starting out. Currently there is an area for users of MIDI on the ST. MIDI users are encouraged to use this as a means to discuss MIDI related topics. This section is expected to expand in the future.

Accessing the Atari SIG has never been easier. One can access it via Internet by telenet'ing to 129.22.8.75 or "Freenet-in-b.cwru.edu" or by calling (216) 368-3888 300/1200/2400 bps. Once on the system, a user can apply for an account application and logon as a visitor. Once here, simply type "Go Atari" to get to the Atari SIG. A visitor can go anywhere on the Freenet and can read anything. They can't

post messages until they get their permanent accounts, however.

For additional information on obtaining access to Freenet write to
myself via the e-mail addresses above or by writing the SIG at its US
mail address:
The Atari SIG
P.O. Box 21815
Cleveland, OH 44121 USA

Lastly, a freenet application is available in the mail by writing a
request to the above address if you rather not download it from Freenet.

The Atari SIG is ready to serve the thousands of Atarians throughout
the world. We look forward to seeing you all real soon! Remember the
staff of the Atari SIG are volunteering their time for no pay and the
Cleveland Freenet, as well as the Atari S.I.G., is a non-profit organization
existing for the free exchange of information.

--

Mark Leair
Atari SIG Public Relations

:MAGS: 93.09.04
What magazines are available for the Atari ST?
==========

If you've got updates, mini-reviews,
or more information on other magazines, please send them to me via e-mail.

As always, WRITE to a company before sending them money for a subscription.

US mags:

AtariUser, published by Quill Publishing Company

Cover Price: US $1.00 Canada $1.45 UK 1.50 (AtariUser is available for free
[$6.00/50 magazine shipping charge] from participating computer dealers,
bookstores & user groups!)

Subcription Rate: $21.30 US Bulkrate, $41.30 US First Class.
Address: AtariUser, 113 W. College Street, Covina, CA 91723 USA

Current Notes, published by Current Notes Inc.

Cover Price: US $3.95

Subscription Rate: $27.00/year (Atari clubs registered with Current Notes may
subscribe at $23.00/year) US, $35.00/year (Canadian club members at $31/year)
Canadian, Foreign rate $44/year.

Address: Current Notes Inc., 122 N. Johnson Rd., Sterling, VA 22170 USA

Atari Interface:

Write for a free sample copy of the Atari Interface magazine
(Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108)

AIM is soon to be available in Canada, Europe and Mexico, and should be in all local WaldenSoftware stores and many bookstores. If your "local" Atari dealer doesn't have it, he should be able to get it for you...

UK Mags:
(Thanks to Sam Marshall <samm@castle.edinburgh.ac.uk> and Kevin Busby <kevinb@syma.sussex.ac.uk> for some of the info here.)

ST Applications:
---

formerly the ST Club Newsletter, this is now the only non-games mag in the UK (although see ST World below). Approx. 4,500 copies per issue sold. News, reviews, interviews, tech tips, general forum, programmers' forum, PD catalogue. DTP'd on an ST. Retains a 'user-driven' feel. Recommended. The associated ST Club runs a PD distribution service and distributes a couple of commercial programs too (Fontkit Plus, UIS III, Molgraph, CRL Virus Killer, etc.).

12 issue Subscription now:
With Disk 6 Mags Without Disk Mags

UK: #26.50 #18.00
Europe (air) #30.50 #21.00
World (air) #38.50 #31.00

Address: ST Club, 2 Broadway, Nottingham, NG7 1PS, UK.

ST World:
---

formerly the leading UK non-games mag. Became a quarterly 'buyer's guide' in Autumn 90.

ST Format:
---

all-purpose 150-page monthly, mainly aimed at young people. Lively, but of uneven quality. Big leisure section, but other areas covered too. Includes cover disk - mix of games demos and (usually out of date) PD utilities. Probably the biggest-selling UK ST mag. Has had several public rows with Atari UK.

Future Publishing, Somerton, Somerset, TA11 6TB Tel. 0458 74011
Fax 0458 74378

Atari ST User:
---

like ST Format. Generally (amongst online users) thought
to be not quite as good.

ST Action:
---

games, games and more games. And games.

Atari ST Review:

Lots of info, more mature editorial style than Format, but not so
polished. 1 cover disk per issue.

Subscriptions: PO Box 500, Leicester, LE99 0AA. Tel: 0858 410510.

There are also, I think, some MIDI mags with strong ST content. I don't
have their names.

German Mags:

ST-Magazin, TOS, and ST-Computer united in August 1993 to the
"ST Computer", which is the only remaining magazine in Germany.
(I don't know if the following info still holds, then. --Steven)

ST Computer:
---
11 issues/year, typical around 180 pages
Subscription: DM 80 (domestic), DM 100 (normal mail), DM 130 (air mail)
Address: Heim Verlag, Heidelberger Landstr. 194, D-6100 Darmstadt 13 GERMANY

French Mags:

ST Magazine

Monthly in French. Oriented towards developers, professional users. Comes
with a disk each month.
ST Magazine - 10, rue Hegesippe Moreau - 75018 Paris - France
(French Teletel users: 3615 Teletel access, code STMAG)

STart Micro

Monthly, includes a cover disk. 11 issues per year. 64 + 16 (separated) pages.
Price: FF38 per issue, subscription: FF360. Subjects: Desktop publishing,
graphics, initiations to C and GFA Basic, survey of outcoming software, music,
folders. Minitel access: 3615 code ATARI. Address: FC Press, 57 rue Danton,
92300 Levallois-Perret, France.

Dutch Mags

ST, published by Stichting ST , postbus 11129 2301 EC Leiden the Netherlands
---
cover price: fl 6,95
Independent magazine by and for atari ST users.
covers all different topics from applications to games and hardware.

60 pages.

6 times a year. One year subscription fl 35,-
black and white pages.

Atacom, by Atari Club Groningen.

Never seen this one. I suppose you have to be a member of the club or so.
price is fl 4,95.
Adress of the club: Atari Club Groningen, Postbus 9164
9703 LD Groningen, the Netherlands.

Atari Nieuws, by Atari ST computer club Nederland

News paper sized publication. Lots of colour on newspaper pages. Not too many
pages though.
price is fl 3,95 (cheap cheap)
monthly publication.
adress: ACN, Postbus 5011, 2000 CA Haarlem, the Netherlands.

GFA-info, by GFA gg (usergroup)

Publication of the GFA-basic usergroup. This group has a lot of mainly
educational software available.
price is fl 5,00

adress: GFA gg, Frankrijklaan 14, 2034 BA Haarlem, the Netherlands

ST News, by Stichting Computers Eindhoven

This is an electronic magazine. It has been around for about 6 years now
and is completely in English!!! The first issues were in Wordplus format
back in 1986 but from the 6th issue on it included a readerprogram
both for color and monochrome. Even with music.
price is fl 10,00
adress: S.C.E., Kornoeljelaan 22, 5552 RC Valkenswaard

Swiss mags:

Atari ST News Schweiz

Dutch Atari ST Nieuws translated into German for the Swiss :-)

:TIPS: 93.06.11
TIPS AND HINTS from other users
==============================

Any 'multisync' monitor which handles 70 video fields a second can be used
with the ST; the custom cable involves no tricks, or commercial ones are
available. The original NEC multisync does NOT handle 70 fields a sec.

More than 3 bombs often means more than 1 error, so interpretations are
tricky.

An ST-formatted disk which is not readable by a PC can be made readable by putting the 3 bytes EB 34 90 (those were 3 bytes of hex) at the beginning of the boot sector (sector 1 of track 0). This can be done with either an ST or PC absolute sector editor. The Desktop of TOS 1.4 and higher does this automatically.

Some (older) PC-3.5"-drives cannot deal with the short track-header produced by ST formatters. On those drives, ST-formatted disks are not readable, independent of their boot sector contents. The other way, however, does always work: format on the PC.

When using disks formatted on a PC in an ST, make sure to insert and access a disk with a different serial number in between disk changes.

For those with the 'inaccessible' mouse and joystick ports, a joystick extender cable will make life easier. The Y-cable joystick extenders make it extremely easy to keep mouse and joystick connected to port 0, and a joystick extender cable in port 1 makes for easy hookup after you've moved the machine.

BARREL is a program which can redirect printer-data to a file. It comes in handy when your printer is unavailable, and the program does not already have an option to 'print-to-a-file'. (It is available on the atari.archive server.)

DBLEFEAT is a program which can redirect disk access from, say, drive A to drive B. Handy when a program 'hard-codes' the data drive, and you wish to use your hard drive instead. (It is available on the atari.archive server.)

On the Desktop, holding the right mouse button allows you to manipulate files in other windows. This is useful for a number of reasons. An example is this: say D:\BLAH.ARC is a file you would like to extract to D:\, but ARC.TTP is on C:\. Top D:\'s window, then hold the right button while double-clicking ARC.TTP in an inactive window.

:ZNET: ??.??.??
Where can I get copies of ZNET?
==========

ZNET is now Atari Explorer Online. Please see EXPLOR for more info.

:EXPLOR: ??.??.??
Where can I get copies of Atari Explorer Online?
==========
Atari Explorer Online magazine is available on CompuServe and GEnie. You can also get copies mailed to you by sending an e-mail message to

stzmagazine-request@virginia.edu

indicating you wish to subscribe.

They won't get to you on Friday (which is when they're posted), but Greg Lindahl provides an excellent service to the networking community by sending these out.

Atari Explorer Online and some information from the Current Notes user
magazine are also available from the atari.archive server under
/atari/magazines.

:PD: 93.06.11
Where can I get Public Domain/Shareware software?
==========

There are FTP sources and a comp.sources.atari.st/comp.binaries.atari.st
mail server. You can also try the commercial on-line services such as
GEnie, CompuServe, Delphi and Bix.

Using FTP, most files should be retrieved in BINARY format (at least those
ending with the suffix of .ZIP, .ARC, .LZH, .ZOO, .PRG, .TTP, .TOS)

Mail servers encode files. You will need a program called 'uudecode' in
order to change files ending with the suffix .UUE (or .UAB, .UAC, etc.)
into their original form.

:MAIL: ??.??.??
E-Mail file servers

archive-server@spud.hyperion.com:

Spud holds all of the comp.sources.atari.st / comp.binaries.atari.st
postings. If you aren't reading these two newsgroups, you should consider
doing so. You may obtain uuencoded files as e-mail. You can obtain a
help file by mailing a message to archive-server@spud.hyperion.com, with
the main body of the message being the word 'help'.

atari@atari.archive.umich.edu:

The atari.archive server is mentioned many times in this article. It contains
a multitude of Atari ST PD and shareware programs. If you don't have access
via FTP you can obtain many of the files via e-mail. You should first obtain a
help file by mailing a message to atari@atari.archive.umich.edu, with the main
body of the message being the word 'help.'. If you are from a uucp site,
please enclose this statement also 'path host1!host2!....', where
host1!host2!... is your path. Please read the help file completely before you
ask questions, and then send any you may have to jon@atari.archive.umich.edu.
Any questions about the archive or specific files go to
weiner@atari.archive.umich.edu (or weiner@terminator.rs.itd.umich.edu,
jeff.weiner@um.cc.umich.edu, weiner@zircon.labmed.umn.edu, or
weiner@umnstat.stat.umn.edu :-)

archive-server@micros.hensa.uk.ac:

This is a UK public domain archive, available to sites within the UK via
via JANET.

info-server@Germany.EU.net:

This is a german public domain archive. This only has comp.binaries.atari.st
and comp.sources.atari.st.

archive-server@Germany.EU.net:

Same place as above, but this one carries other software than just
comp.binaries.atari.st and comp.sources.atari.st.

mail-server@cs.ruu.nl (or uunet!mcsun!hp4nl!ruuinf!mail-server):
---
send the following message

begin
path john@highbrow.edu (PLEASE SUBSTITUTE *YOUR* ADDRESS)
send ATARI-ST/index
end

NOTE: *** PLEASE USE VALID INTERNET ADDRESSES IF POSSIBLE. DO NOT USE
ADDRESSES WITH ! and @ MIXED !!!! BITNETTERS USE USER@HOST.BITNET ***

The path command can be deleted if we receive a valid from address in your
message. If this is the first time you use our mail server, we suggest you
first issue the request:
send HELP

LISTSERV@UOGUELPH.BITNET:

Mail messages with the contents HELP will bring you some usage information
and GET PROG-A16 FILELIST will provide you with a list of files. Subscriptions
to INFO-A16 are also available on this server. INFO-A16 is a digest of
messages from comp.sys.atari.st.

:FTP: 93.05.05
Anonymous FTP servers

Note: The generally accepted practice for FTP use is as follows:

1. Limit access times to non-working hours. This is usually 6-8 pm
to 8-9 am LOCAL time. LOCAL time means local to the computer
you are accessing! For example, 4 P.M. in Minneapolis, Minnesota
is 10 P.M. in England, and 10 A.M. in Germany is 4 A.M. in New
York.

2. Once you connect, issue the following commands at your FTP
prompt:

user anonymous
<YOUR e-mail address should be entered at the Password: prompt)
ls
cd <to the appropriate directory>

3. Limit downloads, especially across the ocean. Remember, there are
other people who are using the same lines as you.

Atari FTP sites (the list is -not- exhaustive)
---

atari.archive.umich.edu [141.211.164.8]

uk.ac.lancs.pdsoft (available to UK users via JANET)

Note: Access is a bit different for this archive site, use the following:

user pdsoft
pdsoft (at the Password prompt)

ftp.Germany.EU.net [192.76.144.75]

ftp.cs.ruu.nl [131.211.80.17]

src.doc.ic.ac.uk

This site has a mirror of atari.archive.umich.edu in /computing/systems/
atari/umich.

:COMP: 93.10.02
Atari-related companies
==========

This is a (still under construction) list of companies and addresses that
might be of use to Atari ST users. Please send me addresses for the blank ones
on this list. See also IAAD, it lists many more companies that are not on
this list.

Welcome to comp.sys.atari.st
============================

This newsgroup is devoted to discussion about 16 and 32 bit Atari micros. At
present that includes the Atari 520ST, 1040ST, Mega ST, STe, STacy, Mega STe,
TT, and Falcon. There are also emulators for the Apple Macintosh and IBM
PC/XT/AT available.

Most of the people who read this newsgroup are technically oriented.
The newsgroup serves as a resource for Atari users ... feel free to
contribute to the discussions.

Associated newsgroups include:

comp.binaries.atari.st ! uuencoded binary programs
comp.sys.atari.st.tech ! technical programming/hardware topics
comp.sources.atari.st ! uuencoded/shar sources

:ARCS: 93.06.11
How do I deal with Archived files (.ZOO, .ARC, .LZH)?
==========

Files ending with suffixes .ZOO, .ARC, .ZIP and .LZH are archive files. They are binary files which may contain one or more other files in a compressed format. Archive files usually take up less disk space, and for this reason have become quite popular for transferring large files via modem.

In order to extract the files from an archive file, one must use an archive program. Here are the correspondences:

ZIP Use UNZIP.TTP or STZIP.PRG
ARC Use ARC.TTP
LZH Use LHARC.TTP
ZOO Use ZOO.TTP

A few hints for first-time users:

* Most archivers will give a short summary of commands if invoked with no arguments.
* If in doubt, to extract a file, copy the archiver to the directory that the file is in, and run the archiver with the arguments 'x [filename]'.
* If you have TOS 1.4 or higher, and/or a CLI, you can avoid copying the archiver by just changing the current directory to where the file is. See TIPS for a tip on how to do this from the desktop on TOS 1.4 or higher.
* Read the documentation for the archivers you use, they will almost certainly answer all your questions. Documentation is usually included in both the source and binary distributions (such as zoo21bin.zoo).

ARCHIVERS
These programs are all available via FTP from the atari.archive server, in the /atari/archivers directory. Recommended files are:

arc602.ttp - version 6.02 of ARC, includes features to archive subdirectories and also include comments with files.

arc602.arc - contains documentation. UnArc using arc602.ttp.

arc521e.arc - older version of ARC. Used mostly by those who want speed, better compression, and don't care about archiving subdirectories. UnArc using arc602.ttp.

lharc.ttp - version 2.0 of LHARC.

lzh201i.lzh - Thomas Questors lzh utility. German documentation. UnArc using lharc.ttp

stzip22.lzh - STZip, with GUI interface

unzip41.lzh - Old version of unzip

zoo21.ttp - version 2.1 of ZOO

zoo21bin.zoo - ZOO archive includes documentation. UnArc using
zoo21.ttp.

:MSA: 93.06.11
Some info on Magic Shadow Archiver
==================================
(This was provided by Chris Herborth)

MSA Archives

The Magic Shadow Archiver (MSA) is a disk archiving program that allows an entire disk to be compressed into one file for transmission. The Magic Shadow Archiver (in shadow.[arc?|lzh?|zoo?] on atari.archive.umich.edu in ~/Archivers) creates .MSA files, which are often compressed using a normal archiver, such as zoo or lharc.

Magic Shadow is notoriously bad when used on a 1/2 meg ST and only one floppy drive. Its disk access and memory use are very badly thought out, and could result in over 160 disk swaps when unpacking an 80 track, double-sided disk.

Due to the fact that it was the _only_ disk image archiver around for quite a long time, Magic Shadow is the de-facto standard for creating disk images of computer demos and other pieces of software that cannot be easily compressed as files.

Because MSA files are disk images, they can only be used to recreate a floppy disk. There is (currently, see below) no way to extract the files from an MSA archive without writing it to a floppy disk.

Magic Shadow works perfectly with any legal TOS floppy format, even high density disks found in modified STs and most MegaSTes and TTs.

Chris Herborth (herborth@pinot.waterloo.ncr.com at work,
cherborth@semprini.tdkcs.waterloo.on.ca at home,
C.HERBORTH on GEnie) is writing a much more efficient MSA extractor, called UnMSA. UnMSA will minimize the number of disk swaps, and speed decompression considerably.

Daryl Richards (no email address, yet) is working on an MSA-Mounter, which will allow someone to unpack an MSA archive to RAM or a file on a hard disk. This uncompressed disk image will then be added to the system as a logical drive (much the same way a RAMdisk adds a drive to the system). MountImage on the Mac is an example of the way MSA-Mounter will eventually work (MountImage is so good, you can install new versions of the Mac OS using floppy disk images stored on your hard drive).

There is yet another MSA archiver now, called MSA II, by Phillip Lang.

:CLI: ??.??.??
What Command Line Interpreters are available?
==========

There are a large number of Command Line Interpreters for the Atari ST.
Some of the more popular ones include:

gulam the 'classic' cli, somewhat UNIX in flavor

BASH GNU Bourne Again Shell

ksh Korn Shell - available under MINT

gemini MUPFEL is the shell used by the gemini environment

master MS-DOS/Unix mixture, shareware.

okami a German shell with many useful utilities built in

pcommand an MS-DOS-like shell

csh C-shell, standard on Unix

tcsh Enchanced C-shell - available under MiNT

Check atari.archive under /atari/cli or /atari/mint, or check one of the
other FTP sites for files.

:ERR: ??.??.??
What does TOS ERROR nn mean?
What do the bombs on my screen mean?
==========

The information below was written, in part, by Darryl May, and posted on
GEnie in January (of ????) by John Townsend. The original also appeared in
the June 1988 issue of _Current Notes_ (122 N. Johnson Rd., Sterling, VA
22170). It has since found its way to me, and is being posted to
comp.sys.atari.st as a service to readers.

Alan Pratt wrote to tell me that the basic information may be correct, but
that it cannot be dubbed "official" unless it originates, on paper, from
Atari. This makes sense, as electronic communications are easily
modified, even accidentally.

Roland Waldi provided information regarding the difference between TOS and
GEM return codes which appears to be correct. The tables have been modified
to reflect his information.

The following is an unofficial list of the errors that can appear
while you are operating your ST computer.

Error description return code alert box #
==========
OK (no error).....0
Fundamental error.....-1
Drive not ready.....-2
Unknown command.....-3

```
CRC error.....................-4
Bad request...................-5
Seek error....................-6

:GDOS: 93.05.05
What is GDOS, and where can I get it?
==========

GDOS stands for Graphic Device Output System (at least that's what my copy of STart, volume 1 number 1 said...)

There is a newer version, called SpeedoGDOS, which should be available commercially from Atari. It is currently included with AtariWorks, and some Falcon packages. SpeedoGDOS uses scaleable fonts - you do not need to create a font file for every point size. There are desk accessories which allow you to manipulate available fonts, and also CPX programs for the newer Atari Control Panel. For those who only have limited memory, a newer version of GDOS is also included with the distribution. For those with investments in older bit-mapped GDOS fonts, they may be used with the new version of GDOS or used as bit-mapped (ie. non-scaleable) fonts within SpeedoGDOS.

You can get a copy of "Everything You Ever Wanted to Know About GDOS (and more)" by Douglas N. Wheeler from the atari.archive server. The file is /atari/programming/gdos.arc.

There is a German version of GDOS available from the atari.archive server. The file is /atari/utilities/amcgdos.arc.

Currently, there are no truly public domain sources for the GDOS system files or font files (at least those supplied by Atari). You can get these files with many commercial programs, such as Degas Elite, WordFlair, etc. You might also want to check your local user group to see if they received a copy of the WordFlair demo program (also available on GEnie). The demo program appears to have the GDOS system and font files.

In the UK The ST Club (2 Broadway, Nottingham, UK NG1 1PS. Tel 0602 410241, Fax 0602 241515) is a licensed GDOS distrubutor:

Catalogue No's:
GDOS-A Driver + Fonts 9-pin
GDOS-B Driver + Fonts 24-pin
GDOS-C Installed system for Opus (9 pin)
GDOS-D Opus 24-pin
GDOS-E FontGDOS + drivers
GDOS-F 300dpi printer fonts

Disks 2.95 pounds each.

:GNU: 93.06.11
What GNU software is available for the ST?
==========

The Free Software Foundation C compiler, commonly known as GNU C (or gcc) is avaiable for the Atari ST. The minimal memory required to do any useful (i.e. beyond 'hello world') programming is 2 megabytes. A 4 megabyte system is recommended.

There is an extensive archive of the latest GNU C programs via anonymous FTP on atari.archive. GNU C is also available at most European FTP sites. The latest version of GCC available for the ST is 2.4.2, this version includes built-in support for C++.

Note that most GNU documentation comes in TeXinfo format. Documentation in this format can be fed into TeX for printing. It can also be processed by Emacs' texinfo to make an info file, which can be viewed on-screen with Emacs' info mode. These two functions can also be performed by the standalone programs 'texinfo' and 'info' (on atari.archive as /atari/tex/tnxf241b.zoo).

The following can be found in the /atari/gnustuff/tos directory of atari.archive: (Note: all of these have Unixmode and MiNT support)

BASH Bourne-again shell
BISON Yet another YACC (Yet Another Compiler Compiler)
COMPRESS Compatible with Unix compress
DIFF Compares files; PATCH does the inverse
EMACS Extreme editor :-)
Fileutils Unix file utilities
FLEX Lexical analyzer, like Unix lex
GAWK AWK report generation language
GCC 2.4.2 C, C++ compiler
GDB GNU debugger, with source level C support
Ghostscript Postscript clone
GROFF Text formatting system
GREP Regular expression search, like Unix grep
MAKE Like Unix make
MAKEINFO Stand-alone system to process .info files
PATCH Changes files from diffs; DIFF does the inverse
PROF Profiles executable code
RCS Revision Control System

SED Stream editor
Smalltalk Smalltalk; object oriented language
TAR Tape archiver like Unix tar

:HAM: ??.??.??
Where can I find Ham Radio software for the ST?
==========

Plenty of Ham Radio software is available for the Atari ST:

Morse code
Radio Teletype (RTTY)
Packet Radio (W0RLI BBS and K9AQ TCP/IP)
Satellite Tracking
WEFAX
Color Slow Scan TV (SSTV)
etc.

For more information contact the Atari Microcomputer Network:

Newsletter Editor - Gil Frederick, VE4AG
130 Maureen Street
Winnipeg, Manitoba
R3K 1M2 Canada
or
Program Librarian - John Adams, KC5FW
17106 Happy Hollow
San Antonio, TX 78232
U.S.A.
or
Tune into the weekly net Sundays 16:00 UTC on 14.325 MHz.

73,
John Langner, WB2OSZ

:LANG: 93.10.18
Public Domain/Shareware languages...
==========
(This section is getting an overhaul, but I don't have the time to finish
the overhaul right now... Sorry, check back next month.)

There are a large number of programming languages available for use with the
Atari ST. Programmers seem to flock to the Atari ST, and if you know of a
language, you can probably find it, or an equivalent, for the ST.

68000 assembler/disassemblers: a68, turboass,
abc
APL
AWK
BASIC
C
C++
cross assemblers (z80, 6502, 68xx,8031/80xx)

Elan
FORTRAN
FORTH
FP
Hope
ICON
LISP
Little Smalltalk
Modula2
OPS5
perl
PROLOG
SCHEME
SIOD
Smalltalk
XLisp
XProlog
XScheme

Check the atari.archive server under /atari/languages. Most other archive sites will have a language directory which you can also check.

:MINIX: ??.??.??
Is MINIX available on the Atari ST?
==========

MINIX is a UNIX-like operating system for the IBM PC, XT, AT, 386, and PS/2, as well as the Apple Macintosh, Commodore Amiga, Atari ST, and later in 1991, Sun SPARC. It is available with all the source code for the entire operating system, the libraries, and nearly 200 UNIX-like utilities.

Demonstration disks for the IBM PC line and Atari ST are available for free via anonymous FTP for people on the Internet. A Macintosh version will be online soon. (If you can't wait, see below.)

To get a free demo disk and the manual, use ftp to connect to ftp.cs.vu.nl (192.31.231.42) and look in pub/minix/demo. The READ_ME file describes the contents of the directory and how to use it. Be sure to fetch and read this first. It contains important information.

If you don't have FTP access, you can buy the demo disk package from Prentice-Hall for $10 by calling (201) 767-5969 or FAX (201) 767-5625. Please DON'T ask me to send it by email. I have quite enough work already thank you. The ordering numbers for Prentice-Hall are:

- MINIX 1.5 IBM demo disk (0-13-582768-x) (in stock now)
- MINIX 1.5 Atari demo disk (0-13-582792-2) (in stock now)
- MINIX 1.5 Macintosh demo disk (0-13-582784-1) (in stock now)

Please note that although the demo disks are available for free on line, MINIX itself is copyrighted software and is not available on line. The demo disks are also copyrighted, but permission is hereby granted to

upload and use them for evaluation purposes. The READ_ME file tells how
MINIX can be ordered.

AS A COURTESY TO US, PLEASE DO NOT FTP DURING BUSINESS HOURS (EUROPEAN
TIME). PLEASE FTP AFTER 11 A.M. EASTERN STANDARD TIME.
If you want to follow the MINIX discussion, read the comp.os.minix
newsgroup, which is quite active and has almost 50,000 subscribers.

Have fun!

Andy Tanenbaum (ast@cs.vu.nl)

:MINT: ??.??.??
What is MiNT?
=============
MiNT is a free multitasking operating system extension for TOS. It is somewhat
like BSD Unix from the programmer's perspective. MiNT can run up to 1 GEM
program along with a lot of character-based programs simultaneously. MGR
and MW2 can both put multiple terminal windows on screen, and bgacc can
put a number of terminal windows on a GEM screen. MiNT and lots of stuff to go
with it can be found at atari.archive.umich.edu:/atari/mint.

TOSWIN is the new replacement for bgacc: it provides lots of nice features like
variable fonts, menus, selectable window gadgets, etc. GEMTERM is a similar
package (it's not part of the standard MiNT distribution) modelled after TOSWIN
and XTerm.

A somewhat interesting note: MiNT is now the kernel of Atari's multitasking
OS, MultiTOS. Originially MiNT stood for 'MiNT is Not TOS', but it's now
'MiNT is Now TOS'. :-)

:XWIN: 93.03.01
Is there a version of XWindows for the ST?
==

There actually is a port of XWindows to the ST now, although it is pricey.
Here's the (slightly hacked up) announcement for it:

X/TOS/window/server and X/TOS/window/server/color

Vendor:
X/software Michael Gehret
X/TOS division
Marktstrasse 8
W-8944 Groenenbach
Germany
TEL: +49 8334 1411
FAX: +49 8334 6245
email: xtosinfo@xsoft.uucp
CPU:
Atari Mega ST, STE, TT
68000 to 68040
Memory:

2 Mbytes (4 Mbytes recommended)
Operating System:
TOS 1.4 or higher
Mouse:
Atari mouse
Graphics:
X/TOS/window/server:
monochrome 640x400x1,
monochrome 1280x960x1 (TT, SM194)
X/TOS/window/server/color:
monochrome 640x400x1,
monochrome 1280x960x1 (TT, SM194)
color 320x200x4
color 640x200x2
color 640x480x4
color 320x480x8
Ethernet Card:
Atari Card (Mega or VME bus)
Riebl/Wacker (Mega or VME bus)
Biodata BioNet 100 II (DMA port or VME bus)
Network Software:
Atari/Riebl/Wacker ANS TCP/IP
Biodata TCP/IP
Disk Space:
none (two floppy disks, may load fonts from second disk or font server)
Features:
full X11 Release 5 implementation
Shape, Multi-Buffering, MIT-SUNDRY-NONSTANDARD extensions
PEX extension optional
support of font server protocol
support of X Display Manager Protocol
access control support
compatible to OSF/Motif and OpenLook
high performance (more than 32,000 Xstones on TT)
fast cursor tracking
backing store and save unders support
size of virtual screen limited by memory only, automatic panning
X/TOS/window/server/color supports all video modes at the same time,
including dynamic visuals
loadable key maps (xmodmap format), full support for European keyboard
layouts
3-button mouse emulation with Atari 2-button mouse
may run parallel to GEM (switching with hot key), configurable multi
tasking priorities
about 50 fonts supplied

:DEMOS: ??.??.??
Why won't demo x run on my machine?
==========

90% of the time, if a demo does not run on your American ST, you probably need to be in 50Hz mode to use it. Get a program like 50hzboot.prg from atari.archive to allow this.

:PAINT: ??.??.??
What is the format for [x] paint program data?
==========

There is a periodic posting of ST Picture Formats, edited by David Baggett. The file is on the atari.archive server under /atari/graphics/picfmts.doc.

:PD: 93.06.11
Where can I get Public Domain/Shareware software?
==========

There are FTP sources and a comp.sources.atari.st/comp.binaries.atari.st mail server. You can also try the commercial on-line services such as GEnie, CompuServe, Delphi and Bix.

Using FTP, most files should be retrieved in BINARY format (at least those ending with the suffix of .ZIP, .ARC, .LZH, .ZOO, .PRG, .TTP, .TOS)

Mail servers encode files. You will need a program called 'uudecode' in order to change files ending with the suffix .UUE (or .UAB, .UAC, etc.) into their original form.

:MAIL: ??.??.??
E-Mail file servers

archive-server@spud.hyperion.com:

Spud holds all of the comp.sources.atari.st / comp.binaries.atari.st postings. If you aren't reading these two newsgroups, you should consider doing so. You may obtain uuencoded files as e-mail. You can obtain a help file by mailing a message to archive-server@spud.hyperion.com, with the main body of the message being the word 'help'.

atari@atari.archive.umich.edu:

The atari.archive server is mentioned many times in this article. It contains a multitude of Atari ST PD and shareware programs. If you don't have access via FTP you can obtain many of the files via e-mail. You should first obtain a help file by mailing a message to atari@atari.archive.umich.edu, with the main body of the message being the word 'help.'. If you are from a uucp site, please enclose this statement also 'path host1!host2!....', where host1!host2!... is your path. Please read the help file completely before you ask questions, and then send any you may have to jon@atari.archive.umich.edu. Any questions about the archive or specific files go to weiner@atari.archive.umich.edu (or weiner@terminator.rs.itd.umich.edu, jeff.weiner@um.cc.umich.edu, weiner@zircon.labmed.umn.edu, or weiner@umnstat.stat.umn.edu :-)

archive-server@micros.hensa.uk.ac:

This is a UK public domain archive, available to sites within the UK via
via JANET.

info-server@Germany.EU.net:

This is a german public domain archive. This only has comp.binaries.atari.st
and comp.sources.atari.st.

archive-server@Germany.EU.net:

Same place as above, but this one carries other software than just
comp.binaries.atari.st and comp.sources.atari.st.

mail-server@cs.ruu.nl (or uunet!mcsun!hp4nl!ruuinf!mail-server):
---
send the following message

begin
path john@highbrow.edu (PLEASE SUBSTITUTE *YOUR* ADDRESS)
send ATARI-ST/index
end

NOTE: *** PLEASE USE VALID INTERNET ADDRESSES IF POSSIBLE. DO NOT USE
ADDRESSES WITH ! and @ MIXED !!!! BITNETTERS USE USER@HOST.BITNET ***

The path command can be deleted if we receive a valid from address in your
message. If this is the first time you use our mail server, we suggest you
first issue the request:
send HELP

LISTSERV@UOGUELPH.BITNET:

Mail messages with the contents HELP will bring you some usage information
and GET PROG-A16 FILELIST will provide you with a list of files. Subscriptions
to INFO-A16 are also available on this server. INFO-A16 is a digest of
messages from comp.sys.atari.st.

:FTP: 93.05.05
Anonymous FTP servers

Note: The generally accepted practice for FTP use is as follows:

1. Limit access times to non-working hours. This is usually 6-8 pm
to 8-9 am LOCAL time. LOCAL time means local to the computer
you are accessing! For example, 4 P.M. in Minneapolis, Minnesota
is 10 P.M. in England, and 10 A.M. in Germany is 4 A.M. in New
York.

2. Once you connect, issue the following commands at your FTP
prompt:

user anonymous
<YOUR e-mail address should be entered at the Password: prompt)
ls
cd <to the appropriate directory>

3. Limit downloads, especially across the ocean. Remember, there are
other people who are using the same lines as you.

Atari FTP sites (the list is -not- exhaustive)
----

atari.archive.umich.edu [141.211.164.8]

uk.ac.lancs.pdsoft (available to UK users via JANET)

Note: Access is a bit different for this archive site, use the following:

user pdsoft
pdsoft (at the Password prompt)

ftp.Germany.EU.net [192.76.144.75]

ftp.cs.ruu.nl [131.211.80.17]

src.doc.ic.ac.uk

This site has a mirror of atari.archive.umich.edu in /computing/systems/
atari/umich.

:TEX: ??.??.??
Is TeX/LaTeX available on the Atari ST?
==========

The TeX/LaTeX typesetting programs are available on the Atari ST. Check the
atari.archive server under /atari/tex. Fonts and device drivers
(including one for the Epson 9-pin printers) are available on the
atari.archive server.

The latest version of TeX (3.14) has recently been made available on the
atari.archive server. The files are in a subdirectory of their own.

Graham Higgins recently wrote a message in comp.sys.atari.st indicating the
minimum files needed to get a working TeX/LaTeX system up and running on the
Atari ST. He said:

You'll need, at minimum:

The binaries for LaTeX/TeX :StTeXBin
The style files :StTeXSty
The font macros :StTeXTfm

If you want to screen-preview, you'll need screen font files (showdvi)
If you want to print locally, you'll need printer font files (dvifont)

Allow 5Mb.

For a step-by-step article on setting up Tex and LaTeX, send an e-mail request to davidli@simvax.labmed.umn.edu. Be sure to mention 'tex.setup'.

There is also a complete, ready-to-install distribution called CS-TeX. The latest version, 4.0, is available at atari.archive: /atari/tex/cs-tex-4.0. This consists of 8 disks full of TeX stuff, plus an installation program that takes care of the details for you.

==========
Hope you liked the comp.sys.atari.st FAQ. If you have comments, suggestions, more material, etc., mail me at sourada@iastate.edu

Thanks to David Paschall-Zimbel (davidli@simvax.labmed.umn.edu) for compiling most of this FAQ.

Later,

Welcome to comp.sys.atari.st
==========

This newsgroup is devoted to discussion about 16 and 32 bit Atari micros. At present that includes the Atari 520ST, 1040ST, Mega ST, STe, STacy, Mega STe, TT, and Falcon. There are also emulators for the Apple Macintosh and IBM PC/XT/AT available.

Most of the people who read this newsgroup are technically oriented. The newsgroup serves as a resource for Atari users ... feel free to contribute to the discussions.

Associated newsgroups include:

comp.binaries.atari.st ! uuencoded binary programs
comp.sys.atari.st.tech ! technical programming/hardware topics
comp.sources.atari.st ! uuencoded/shar sources

:MODELS: 93.01.30
All the models in the ST line
==========

This is a pretty complete list of all the ST/TT models and their main features. If you have any additions/correction, of course, send them to me.

Feature key:
CPU's:
8 8 MHz 68000
16 16 MHz 68000
16/3 16 MHz 68030
32/3 32 MHz 68030

RAM:
/1 128kB
/5 512kB
1 1MB
2 2MB
4 4MB
S SIMM slots for expansion

Built-in:
F Floppy
M TV modulator

Extra:
AV 8 bit digital stereo audio, 4096 colors, hardware scrolling, analog joystick ports
MB MegaBus processor-direct bus slots
6U 6U VME bus slots, second serial port
FC Motorola 56000 DSP, 16 bit stereo audio, much enhanced video

TOS:
Highest built-in TOS

Models:

Name	CPU	RAM	TOS	B.I.	Extra	Comment
130	ST	8	/1	1.0	M	Never marketed
260	ST	8	/5	1.0	M	
520	ST	8	/5	1.0	M	
520	ST+	8	1	1.0	M	
520	STm	8	/5	1.2	M	
520	STfm	8	/5	1.2	FM

STBook 8 1 ??? F Notebook
520 STe 8 .5S 1.62 FM AV
1024 STe 8 1S 1.62 FM AV
Mega STe 16 1S 2.06 F AV,MB,6U
TT 16/030 Just for developers
TT 32/030 S 3.06 F AV,MB,6U Various mem/HD configs
Falcon 16/030 S 4.?? F AV,FC Many enhancements!

:FALCON: ??.??.??
What are the specs on the Falcon?
==========

Here's some stuff I culled from the (reposted) Delphi conference with Sam Tramiel.

--- Start Quoted material ---
Here's the specs on the Atari Falcon 030:

CPU: Motorola 68030 running at 16 Mhz
32-bit Bus
Optional 68881 or 68882 FPU
RAM: 1,4, or 14 megs
Standard Atari Cartridge Port
Motorola 56001 DSP chip

Expansion Bus:

Internal direct processor slot for 386SX PC emulation, or other coprocessor

Graphics:

Super VGA graphics: 640x480 with 256 colors
True color 16 bit mode allowing a display of up to 65,536 colors
Accepts external video sync signal to allow high quality genlocking
Overlay mode for easy video titling and special effects
Overscan on TV's and ST Color monitors
262,144 possible colors
hardware-assisted horizontal fine scrolling
BLiTTER graphics co-processor

Sound features:

Eight 16 bit audio DMA record and playback channels
Stereo 16 bit digital DMA input
Stereo 16 bit DMA audio output
SDMA sound/DMA Coprocessor

Standard Ports

SCSI II port with DMA
High speed LocalTalk compatible LAN
Connector for analog RGB color (ST or VGA) or composite video
RS232C serial port
Bidirectional parallel port
MIDI IN/MIDI OUT
Stereo microphone input, miniature stereo plug
Stereo audio out, miniature stereo plug
Two joystick connectors
Two enhanced digital/analog controller/light pen connectors

Data Storage

1.44 Mbyte floppy disk drive
Optional internal IDE Hard Disk

System software

Pre-emptive Multitasking with adaptive prioritzation (MultiTOS)
Inter process communication
NewDesk desktop and eXtensible control panel
Multiple window user interface; number of windows limited
only by memory or software in use.
--- End Quoted Material ---

:ACCEL: ??.??.??
Hardware Accelerators
=====================
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

68000 based: ICD adspeed ST/STe
Fast Tech Turbo T-16 (16MHz)
T-20 (20MHz)
T-25 (25MHz)
68030 based: Gadget by Small SST (16MHz to 40MHz user changeable, 8 SIMM slot
68882 FPU socket, 1 expansion slot, TOS 2.0x).
Fast Tech : Tiny Turbo
Full size version

:TAPE: 93.08.11
Can I use a SCSI tape drive?
============================

Yes, just about any SCSI tape drive should be useable on the ST line. (Of
course, if your computer doesn't already have a SCSI port, you'll need a SCSI
host adapter.) There are at least two freeware/shareware programs that can
help you back up your HD to SCSI tape: TapeBIOS and GEMAR (a German GEM
ARchiver)

:DRIVES: ??.??.??
What should I know about hard drives and the ST?
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

To get a hard drive for ST, STe, Mega, Mega STe or TT(using DMA port):
1. Host adapter (convert the ST's DMA to SCSI standard):
ICD, Supra, BMS are the three major manufature. ICD has very good
software updating support and updates very often.
2. SCSI hard drive or MFM/RLL drive with SCSI adapter:
i). SCSI drive:
Like Quantum Pro80LPS, Seagate ST-xxxN series, they have a 50 pins IDC
connector, and usually say SCSI hard drive or Mac drive. (Any Mac except
Mac128, Mac512, FatMac has SCSI built in, so a drive that works with Mac
usually has SCSI interface).
No other adapter needed, just connect to the host adapter in 1.

ii). MFM/RLL drive:
These types of drive is older and used in older IBM machines. To use
them you need an adapter to convert them to SCSI. Adaptec 4000/4000A
is for MFM, 4070 for RLL drive, Emulex and OMTI also has similar cards
availible. Adaptec has stopped production for quite sometime so look for
these in used/liquidation place. (usually goes $40 to $75 each).

Connect the drive to the adapter (said Adaptec 4000) then connect the
adapter to the host adapter. (said ICD). It looks like following:

```
-------------- ----------- ------------ ----------
| MFM drive |------->|ACB 4000 |------>| ICD |------>| ST DMA |
-------------- ----------- ------------ ----------
```

3. Case, power supply and cabels for the drive system:
Unless you have Mega, Mega STe, TT and the drive is 3.5" so you will put
the drive internally, you will need a case with power supply to house the
adapter and hard drive. IBM case is very easy to get and has a lot of space
for expansion.
For older drive you need about 40 watts each drive, for newer 3.5" drive
they use about 20 watts or less, Quantum LPS drive use about 10 watts each,
make sure your power supply has more than the drives need. Again if you
use IBM case, the 150 watts power supply for that type case can drive at
least 3 drives without problwm.
Cables: DMA cable usually comes with the host adapter.
power cable from power supply to drive usually comes with power sup
SCSI cable from host adapter to SCSI drive or adapter(for MFM/RLL),
it's 50pins IDC female connector on each end with 50 conductors
cable. Should be availible at place you get the drive.
For MFM/RLL drive you will need the usual MFM/RLL drive cable:
(a 34 conductors cable and a 20pins connector, again should be
available at the place you get the drive).

Now, connect them all together. Before power up, check the connection again.
And check the jumper setting on the drive (consult the drive's manual). If you
are using more than one drive with the system, make sure only the last drive
has the terminator (either a DIP or a signle inline package of resistor, which
usually is socketed and close to the SCSI connector on the drive circle board.
Remove the terminator from other drives. [only the last drive should have the
terminator]

Software usually comes with the host adapter, or you can FTP atari's AHDX5
from ftp sites.

:FLOPPY: 93.08.11
Can I use 1.44 meg floppy disks and Flopticals?
==========

1.4 megabyte floppy drives will soon be available from Atari for MegaSTe
and TT machines. If you own an older Atari ST, there is a company which offers
a $199 kit (including floppy) to install and use the drive.

Note that Tos versions prior to 2.05 will not format a 1.4 meg floppy from the
desktop.

Floptical drives (floppys that use optical tracking to get 21MB on a 3.5" disk)
can also be used through a SCSI port. ICD's newer host adapter software (the
'PRO' version) will handle them.

:GRAPHIC: ??.??.??
How can I enjoy enhanced graphics on my ST?
==========

For stock STs, JRI makes a chip which allows a 4096 color palette.
There is also a public domain enhancement that allows 32768 colors on
older STs. This can be found as 32kcolor.lzh on some archives.

There are a number of graphics boards on the market. Here is a first pass
at listing some of them. The information is based on postings by Ben Gilbert
and Jari Lehto.

C32 board by Matrix Datensystem (Germany)
* 800x608, 256 colors
* all ST/TT models
* 256k, 512k and 1meg versions

C75Z board by Matrix Datensystem (Germany)
* 1024x768, 256 colors
* Mega ST or STe, TT VME Buss

(Matrix GmbH has over 15, maybe over 20 with all versions, different
graphics boards available, from hobbyist to professional, from CAD
to GenLock and digitizing.)

ISAC board by Dover Research Company (U.S.)
* 1024x768, 16 colors from palette of 4096
* makes hi-res look like ST low res, just with a huge window
* Mega ST buss
* Dover Research Co. (612) 492-3913

The Imagine by Wittich Computer GmbH (Germany)
* 1024x768, 256 colors
* Mega ST only

(Versions available for all ST/TT models. Several possible resolutions.
Reasonable price, but slow and not very compatible..)

Crazy Dots by TKR (Germany)
* 1024x768, 256 colors
* Mega ST only

(1280x800, 256 colors out of 16.7 million color palette. 1664x1200 for
both 16 color and monochrome. True color option available. Mega ST,
Mega STe and TT.)

reSOLUTION SuperVGA by GengTec (Germany)
* 8 resolutions, 320x200 through 1600x1200
* 16 colors without driver, 256 out of 256,000 with driver
* 1 mb RAM
* uses a standard VGA monitor
* Mega ST or regular ST
* available in U.S. from Rio Datel, 1-800-782-9110, (702) 454-700

(1024x768 is the highest resolution with 256 colors. Driver is called
Multicolor VGA option. Compatible with NVDI and Blitter. Multisync
monitor recommended.)

AlberTT
* like ISAC card, but specific for TT VME buss

MegaScreen
* 832x624 monochrome
* connects to MegaBus
* works with Spectre

Reflex
*1024x1024 with SM124 monitor
*2048x2048 possible with expansion
*usable with most big-screen displays

ODIN by Marvin AG (Switzerland)
* external expansion
* gives TT-resolutions to a regular ST

Cyrel
* RISC-based card
* extremely costly

Here's a few more cards, available from OverScan GbR, Saentisstrasse 166,
1000 Berlin 48, West Germany, ++49 30 721 94 66, ++49 30 721 56 92 (FAX),
++49 30 727 05 6 (Mailbox, language: German)

Autoswitch OverScan for the ST (NO STE compatibility) is DM 129.--, you
don't have to buy a new monitor. The maximum resolution on a SM 124
is variable, but in most cases at about 732*480.
AutoSwitch OverScan TT is a VME board. It's about 249.-- DM, you also can use
your old monitor, but it only works in the TTs five color modes
(3 ST-compatible modes, 2 TT-modes). Resolutions are variable, ask
OverScan about the values for your monitor.
Falcon ScreenBlaster blows up your Falcons resolution to a maximum of nearly
900*600 on SVGA-monitors. It'll be shipping as soon as Falcon030s

become available, and the pricing will be near 150.-- DM.

Graphics cards for which information is sought:

OmniChrome board by Omnimon Peripherals

JRI GenLock

Atari/Lexicor 24 bit color card

Jari Lehto proposed the following recommendations:

Low budget SVGA - reSOLUTION
Professional high-end use Cyrel (or is it Cyrix?)
Hobby or semi-pro DTP Reflex
Hobby DTP MegaScreen
To obtain TT resolution ODIN

:KEY: 93.09.02
A few keyboard questions
========================

Here's how to connect a MegaST-keyboard to a 1040ST:
It's taken from the "ST-Computer" October '90 ('Quick-Tips')

Picture 1

Mega ST-Keyboard cable
(seen from outside)

```
It's no problem to connect * 1
the MegaST keyboard to the ____________ o
smaller computers 520St and ___| | * 3
1040ST. To do that, you only | 6 * | * 4
have to get a 6-pin western | 5 * | * 5
connector plug to be connec- | 4 * | * 6
ted to the keyboard. (available | 3 * | * 7
in Electronic shops) After that | 2 * | * 8
four cables must be connected | 1 * |
with the 'Pfostereihe' (the |___ | 1040ST
plug inside the 1040ST) where |____________| Keyboard-Plug
normally the dazzy original-keyboard
is plugged in. The exact connection Picture 3
is shown on picture 2 and 3
```

Eickmann Computer, Franktfurt

```
* * * * * * * * * * * * * * * o *
18 17 16 15 14 13 12 11 10 9 8 7 6 5 4 3 1
```

Picture 2 520 ST Keyboard plug (not for You, Jeff)

Picture 3 (Meg to 1040ST) Picture 2 (Meg to 520ST)
MegST MegST
keyboard cable <--> 1040ST plug keyboard <--> 520ST plug

```
6 <--|----> 8 6 <--|----> 1
| |
5 <--| 5 <--|

4 <-------> 5 4 <-------> 14
3 <-------> 6 3 <-------> 15

2 <--|----> 4 2 <--|----> 13
| |
1 <--| 1 <--|
```

****
And now for No.2
****

If you remove the keyboard from the Mega ST and switch on the computer,
the computer won't boot up and send you a series of 'Alert-Beeps'.
If YOU want to let your Mega ST run without a keyboard (FAX-Server a.s.o.)
simply connect a restistor to the keyboard-plug in the Meg and at once
there's silence and he'll do his job!
(Freely translated from Eickmann-Computer by me)

```
6 * 10kj resistor
5 * _____
4 *----|_____|--
3 * |
2 *-------------+
1 *-------------|
```

Mega ST keyboard-plug
(inside-view)

****
And here's another one: This one's about the Hardcopy-function of the ST's
****

Do you hate it - after pressing <Alternate>+<Help> the same time - when
you don't have a printer connected to the parallel port of your ST and
must wait a long time to work again because of the long break taking the
computer to realize that there's no printer connected?
Well, do this and forget about it:

connect the following pins of the printer port of your computer (better:
create a Sub-D 25pin-male-plug an connect the pins on the soldering side):

pin 13 connected to 14 and 15 (all across the plug)
pin 1 connected to 10
pin 23 connected to 11 and 12

****

:JOY: ??.??.??
What joysticks work best with the Atari ST?

The Atari ST works with joysticks with a 'standard' D-Socket. IBM-style
joysticks, Apple joysticks, and Nintendo joysticks will -not- work.

Some recommended joysticks:

Konix Navigator - "best .. if you want to use it for any length of
time"
Gravis - "responsive ... great for games like MidiMaze"
WICO - "strong reed switches, hard plastic and metal components"
Atari - "FAR more controllable and responsive than other, more durable
units"

:MODEM: ??.??.??
What modems work with the Atari ST?

Any external modem should work fine with the Atari ST-series of computers. You will need to purchase or build an RS-232 cable. Be sure the cable is capable of establishing DTR with your modem, as many telecommunications packages check the status of the DTR line. (Ask your local hardware guru if you don't know what DTR is...)

The ST can connect to modems at up to 19,200 baud. Practically, you will purchase either a 2400-baud or 9600-baud modem. The cost of 2400-baud modems has dropped so much in the past few years that you should not even consider a slower modem. Believe me, modem speeds under 2400-baud are going to seem SLOOOOOOW to you!

You will probably need a serial port patch program to use high speed modems on your ST; most versions of TOS have a bug in CTS/RTS handling.

:MONITOR: ??.??.??
What should I know about monitors and the ST?

The monitor is your connection to the ST. Without a monitor, you're typing blind. (Unless, of course, you have an RF modulator on your ST and attach it to your TV set. This is discouraged, as the bandwidth and resolution are pretty terrible for anything other than arcade games.)

There are three monitor choices for those of us owning Atari ST/STe equipment:

1. Monochrome monitors - these include the venerable SM124, one of the sharpest monochrome monitors on the market. Street price is about $150, used monitors should run around $80-90. You can also purchase a 19" monochrome monitor. This gives you a 'big screen' to play around in, and is best for work with DTP and CAD systems. The price is a bit high at $1500+, and you'll need a plug-in board, which is generally set up for the Mega ST machine.

2. Color monitors - including the SC1224 in all of its incarnations (JVC and Goldstar being the primary vendors). The newer monitor, the SC1435, has a 14" screen and stereo sound.

3. Multisync monitors - these monitors provide monochrome and color access in one monitor. The street price is around $450, about $100 more than a standard Atari color monitor. You need to reset your computer to change resolutions. In many cases, a nice little switch box is provided (or you can build one) which does this for you. Examples of multisync monitors include the OMNIMON RAINBOW MONITOR.

There are any number of monitor choices for those owning Atari TT equipment, although they all boil down to 'multisync VGA'. There 14" color VGA monitor from Atari is quite nice, as is the 19" monochrome monitor. Any standard 14" multisync VGA monitor will do as well. Forget moving your SM124 or SC1224 monitor to your new system, the cabling and electronics is just not going to work.

:PCEM: ??.??.??
How can I turn my Atari ST into a PC emulator?
==========
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

Supercharger is the only external PC emulator with 8MHz V30 and 1MB RAM in a nice lunch box. It connects to ST's DMA port and defaults as device 3. It's powered by external power supply. Has 8087 socket and one expansion slot. The 1MB RAM can be used as RAM drive by ST when the IBM side not used.

:SPECTRE: ??.??.??
How can I turn my Atari ST into a Macintosh emulator?
==========
(Thanks to Wayne (trek@ihlpb.att.com) for this info.)

Product: Spectre GCR from Gadgets by Small, Inc
40 W. Littleton Blvd
#210-211
Littleton, CO 80120
Retail: $299.95

Description:
The Spectre GCR is a combination of software and hardware that allows the Atari Mega/ST/STe/TT line of computers to emulate an Apple MacIntosh Plus(tm) Computer. The emulation is so good that most Apple software runs out of the package using your Atari Disk drives to read in the Mac software. It does all of this while running 20% faster than the program would on a MacIntosh Plus and provides you a 30% larger screen area.

The Spectre GCR is a combination of software (written by Gadgets by Small, Inc), a cartridge (also from Gadgets), and a pair of 128K Apple ROMs (from either a MAC 512kE(tm) or Mac Plus - part numbers 342-0341 and 342-0342 which you purchase separately from an Apple source.) The Apple ROMs can currently be purchased for around $150. MacIntosh documentation and software, including the operating system (referred to as System/Finder), are also required to round out the package.

The Spectre software is currently at release Version 3.0. Gadgets supplies fairly frequent updates to allow you to keep up with the Apple OS releases. The Version 3.0 update retails for $20. Version 3.0 supports 15 of the 128K OS releases up to, but not yet including System 7 releases.

Spectre software supports Mac formatted disks (including formatting your own) with your Atari drives, Mac sound, large screen displays (1280x960) Mac harddisks via SCSI through a Megatalk board (retail $299.95 from Gadgets) or through an ACSI-SCSI host adapter (my Syquest works beautifully- and

the excessive use of disk accesses in Mac software will have you wanting
a hard drive). Spectre 3.0 also supports DOS Mounter and Apple File
Exchange if you are needing MS-DOS data disks for Mac work. Language
configuration support, keyboard support, A4 paper size support for
Lasers have also been added to 3.0.

Running Spectre:
The feeling you will get when you see your Atari transformed into a
MacIntosh with a decent screen is indescribable. The extra flexibility
that you get will also make you feel more confident in the greatness of
your Atari. You will also get to see some of the frustrations with one
of the other sides of the fence - frustrations like excessive disk access,
remembering not to remove/change a disk unless the OS tells you to, etc.

Speaking of changing disks, there are major differences in the operating
philosophies of an ST and of a MacIntosh. You really must read the
documentation that comes with the Spectre GCR (and I for one found that
a real delight. Dave and Sandy have a very different approach to software
documentation that makes it enjoyable reading.) You should also read the
Mac Operating System docs. One other reference you may need if you are
going to do much with Mac software is one of the reference manuals
referred to as the MacIntosh Bible.

If you ask an Apple dealer if a particular piece of software runs on
a GCR, don't figure you will get a straight answer. They won't know.
The current compatibility list from Gadgets lists about 450 programs
and their release numbers that have been tried and found to work with
Spectre GCR. In general, if a piece of software won't work with the GCR,
it is probably becuase of copy protection. Most serious Mac software is
not copy protected.

One last note - earlier versions of the emulator exist that were not capable
of reading Mac disks directly. It's a capability you will want.

(Thanks to Shoou-yu Tang (sytang@lamar.colostate.edu) for this info.)

Spectre GCR is the best availible, you need to obtain a set of 128KB ROM from
Apple (they are used in Mac 512KE and Mac Plus, noted that Mac512 use older 64
KB ROM which is not good) to fully utilize the device. Also it's recommanded
to use it with MONO monitor and at least 2MB RAM. The Spectre software takes
about 300 some KB of memory, so on a 1040 there is not very much left for Mac,
especially after the Mac system is loaded. 4MB memory and MONO is best.
It can read/write Mac disk direct using ST's drive (double side drive, as most
Mac drive is double side). With DOS mounter or software like that you can read
/write ST, IBM disk from the Mac desktop as well (don't try to run the ST, IBM
binary. It's only for file transfer). Or you can use Apple File Exchange to
read/write ST, IBM disk.
Syatem 6.0.5 runs fine, system 6.0.6, 6.0.7 runs also. But system 7 will not
run with it.

:UPGRADE: ??.??.??
Can/should I upgrade my ST?

The answer depends on the type of ST you currently have, and what you want to do in the future. Be aware that there are a large number of modifications one can perform on the venerable 1040ST, and that newer machines are coming down in cost so much that to obtain a certain feature it may be cheaper to purchase new than to upgrade.

1. Memory - most ST machines may be upgraded to 4 megabytes. The newer STe machines use either SIP or SIMM

2. TOS - for those still running TOS 1.0, now is the time to consider an upgrade. TOS 1.4 has been around for at least 2 years now, and is -much- faster (and safer) for those using hard drives. TOS 2.06 is available as a hardware upgrade to ST and MegaST machines for about $150 from CodeHead

==========
Hope you liked the comp.sys.atari.st FAQ. If you have comments, suggestions, more material, etc., mail me at sourada@iastate.edu

Thanks to David Paschall-Zimbel (davidli@simvax.labmed.umn.edu) for compiling most of this FAQ.

For Sale:

Notator SL 3.1

The premeire notation/sequencing program for the Atari ST line
of computers.

"IMAGINE that you have a blank score pad on a
music stand in front of you. To you side is a "magic keyboard",
so that whatever you play appears on the score pad, right now.
Of course, you can also write and erase manually on the score
pad as well. Now, imagine that this is set up in large room
filled with your choice of performing musicians. Each of these
players has a "magic music stand". Anytime you write a note
onthe score, it immediately appears on the music of the correct
player, in the correct transposition. If you play something on
your "magic keyboard", it appears on your score and on the
music stand of the performer(s) your like to play it. If you
change your mind or make an error, and correct your score, the
part on the performer's music stand is automatically corrected
,too. Anytime you want to hear any part of your music, you just
tell the musicians to play it, in any combination, starting and
ending anywhere. These musicians only take breaks when you do,
and they interpret your music exactly the way you tell them to.

You just imagined Notator."

-Phil Shackleton
Author of Notator-Volume
I, Alexander Publishing

I paid $499 + $100 upgrade to 3.0 + $39 upgrade to 3.1 +
tax. The lowest mail order price that I've seen is $529.
I will sell for $300 obo.

1260. programming

Newsgroup: comp.sys.atari.st
Date: 1993-11-04 18:07:16 UTC
From: EMERSON_EMI@bdt.COM
Message-ID: <CFzBo5.ByI@bdt.com>
Source record: 199092

Hello Gang,

I am interested in programming for the ST family in C.
Some Questions I have:

1)Will Ian's Heat and Serve C produce well-behaved code from well behaved source? I don't need floating point but I do need GEM and I also will be working with large files and SCSI send and receive commands? Is version 1.49 (cc) the latest? V1.8 of Gemfast? (dated 5/92)

2)Pure C in English yet? Availible in US yet? How is Lattice in comparison? Or should I think about GNU C?

3)What about RSC editors? Can I use the one that came with my copy of Mark Williams C? (I did't want to use MWC 3.0 'cause its been unsupported for a pretty long time and I never have used it so I don't know if it's any good, any opinions?

4)How does one best learn to program GEM? I have 1 through 13 of the ProGem series, is there more? I need some more basic material to start me off.

Thanks all, more knowlegeable than me, who reply.

P.S. The reason I think HSC may be buggy is that the examples are buggy, Minicolr.prg hangs my system (mega ST 1.2). and Browse, another example, bombs with Windowed ACCs. Also MasterBrowse 3.2 is the only program I've seen written with HSC and it is none to stable, either. However this is not a slight against Ian Lepore's work which looks great and is well documented. I don't have enough experience to see if it is the source or the compiler (or if a newer version addresses all these problems).

Please use email as my news feed seems erratic.

1261. req: 1st Word+ .RSC file

Newsgroup: comp.sys.atari.st
Date: 1993-11-04 18:27:05 UTC
From: vacs@hpna49-1.cern.ch

In article <1993Nov3.184903.15371@nrtpa038.bnr.ca> you write:
>
>I was frustrated by the less than full terminal (80x24) mode of Stalker
>until the beginning of last year, when I bought a TT. Everything works
>great in 640x480 with 16 colours.
>
>I know that's not much help but it did solve my problem :)
>
>But seriously, you may want to install the overscan modification into
>your ST, to increase your monochrome resolution. Some one else may be able
>to help you with how to get your hands on this modificaton.

I have a Moniterm Viking (1280x960), so window size is not a problem
there. It is bothersome if I'm working with the standard color
monitor. Someone suggested use a 14x7 font, but I as a user, should
not have to resort to such measures. For all I know, the window
problem can be do to GEM and not STalker.

My major concerns are those of 'tset' and character loss. If Uniterm
knew how to deal with the Viking, I'd probably never use STalker
(however, having it as a desk acc is nice). STalker scrolling is slow,
and its vt100 emulation seems to have some minor problems. It does
have some nice features(run as desk acc, link to STeno, BackTalk), but
concentration should be put into getting the core functionality stable
and not on the bells-and-whistles.

I'm still mystified why executing 'tset' on a Unix machine will
screw up the history buffer in STalker.

BTW, is there a way to contact Gribnif (via e-mail) so consumers
can report bugs/problems on Gribnif software. The company I
work for has such services, and it helps us in making better
products and in servicing our customers.

```
>Welcome to the club. I have a lynx and it didn't go anywere.
^^^^

A german videogames mag just announced 24 lynx games for the
next month.

Maybe future will look brighter? =)

>I have seen the
>future and its 3do!!!! The Jaguar will bomb just like the TT, Falcon and Lynx.
-
3do is _really_ impressing, but it's more expensive than the Jaguar
and it's "only" 32bit.
IF Atari can release the Jag-CDrom in summer '94, it can easily attract
most potential 3d0 customers - right?

>Does anyone believe Atari will spend money for advertisement?
-
The news "Atari stocks went up to 11 1/8" is some kind of
advertisment. ;-)

>Sell your Atari stock while you have a chance.
-
I wish, I had some.

greetings
-thommy

----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR] OR use the number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once. i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having to reply "y" for each file
when asked "get {filename}?".
12) close [CR] to end (go back to ftp and
13) quit [CR] to go back to UNIX or.......
14 bye [CR] to end and go back to UNIX

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on which the programs

were intended, or in UNIX .....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate uncompress program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...)
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an
other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.
- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")
- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer.
i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

Calamus Outline Art will let you do this. I haven't played with
it too much, but it seems that Outline Art will only deal with
Calamus fonts. I do not know if can deal with PostScript fonts.

One thing that is nice is that PageStream 2.2 will readin CVG
files. Therefore, you can do fanncy stuff in Outline and
import it into PageStream (which can than output Postscript).
Outline does come with a converter to convert Outline Art files
to EPS, but I haven't tried it out yet.

I wish PageStream allowed tools to easily make circular
text or text following an arbitrary path. Because PageStream
supports PostScript fonts, so one basically has 100's of fonts
available to choose from w/o additional cost (PostScript
fonts can be gotten at various ftp sited).

Message-ID: <CFzGry.Fsw@cbfsb.cb.att.com>
Source record: 199094

Is Lattice C still produced by Metacomco? If it is what is there address? And are they currently supporting the US?

I have Lattice C 3.04.01 and it has a broken do/while loop. Jump 4 bytes further back before the beginning of the loop. I called England for support, they were no help, I was on Bix and they were no help, I wrote letters and that was no help. Is Metacomco support still this bad?

If you get the idea I don't like Metacomco you're right!

> Does anyone believe Atari will spend money for advertisement?
> Sell your Atari stock while you have a chance.
>

Pete, again you go off and say the future is 3do--hmmm can you say "$700 waste of money?" I myself have seen neither machine, but have the common sense to realize that a machine that costs less than a vcr will certainly be more widely and easily accepted by homeowners vs a $700 gadget that MAY be more utilized in the future. I don't believe the average american will spend $700 on that... As for the stock price--it will probably hit $13 and hover +-$1.00--that's what the price was at IPO a couple of years ago. And--if Atari starts to make money and issuing dividends--the stock will again rise as the stock becomes less speculative. I wouldn't encourage anyone to sell until some reports come back on Jag sales in the two test markets.

Now, do you have anything intelligent to say? I hope we can have a more constructive and positive relationship with you Peter. In fact, we enjoy working with humans....

(...sound of choking...)

Seriously, you may be experiencing a problem totally unrelated to TOS.

It is your system which crashes, and this may be caused by hardware problems or possibly broken software. TOS as such is extremely stable, as most BBS sysops will testify (I've run about 30,000 hours by now, the very few down-times over the years due to external causes such as the cutting of a power line).

This is not to say that TOS doesn't have its bugs (every system has some), but these are not of the kind to generate your problems. Given that the hardware is fault-free, an Atari should run problem-free for years, and this is probably what most Atari owners have experienced. Everything mass-produced has units which unfortunately are flakey for a variety of hardware or quality-control reasons, but these are relatively rare. I've sold enough Mega ST's to professional users with PC-experience to know that all were amazed that months, even years, could go by with no need for service or "reconfiguring" or harddisk cleanup despite heavy use in less than ideal workshop surroundings.

From: rrice@netnews.upenn.edu
Message-ID: <159870@netnews.upenn.edu>
Source record: 199100

Someone very helpful said, when I asked if Le Redacteur could output PostScript format:

> : No. The nearest you can get is to output files in Wordplus format and
> : then convert to PS.
>
> Bummer! But thank you. Now, does That's Write 3 print to PS? Word of mouth
> on Redacteur has been so good...
>

Redacteur's very impressive - especially if you're moving up from Wordplus. The Wordplus to PS route _does_ work, so long as you don't want to use fancy fonts it's be practical for occassional use.

Meanwhile, TW3 has yet to be released AFAIK, which may be why your question hasn't been answered. It is, however, very close to release, and I know someone that does on-line support for Compo, so have asked him.

Have you considered Protext BTW ? Not Wysiwyg, but very fast, now supports mice and menus and has a PS driver in the new v6.

Working title have just dropped Calligrapher, so you may be able to get a bargain copy of this if it appeals. You will get support, but no more development. Needs a hard drive to run the PS bit though.

Hope this helps,

And I wrote back:

From rrice@ccat.sas.upenn.edu Thu Nov 4 16:04:19 1993

You have been most hopeful to be helpful! Thank you very much!

What I'm out to do is to replace Atari Word Perfect 4.1 with something better. I had hoped that would be Calligrapher, but word of mouth on that was NOT good. I'm writing my doctoral dissertation at the moment, and my biggest problem has been in quoting Attic Greek--the fanciest of fonts! I've been sucking the STe's text into IBM Word Perfect 5.1 (DOS) with a Greek language module, and printing the entire thing out on an IBM laser printer that can suck PostScript off the University's ethernet. I figure that PostScript output is the best way to print Greek on printers that didn't know that they supported it.

The new word processor will have to load Word Perfect files, allow a Greek font with overstrikes or subscripts, or both, and print to something that I can print. I know Le Redacteur does the footnotes, endnotes, and macros I need--but the Greek font? Hmm. That's Write 3?

Hmm. PosScript output? Hmm. If I could keep my footnotes, some sort of desktop publisher that allowed the Greek would be a thought. The other is (Gacch!) a clone... Yecch!

Thanks again!

Rob S. Rice

(I have considered TeX/LaTeX, but that all looks prohibitively intricate at the moment, and Greek TeX fonts are pretty damn expensive on their own!)

And did the rest of you find that worth while or comment?

This morning's (11-4-93) San Jose Mercury-News had a major article about Atari and the Jaguar rollout in the business section, and amazingly, a color "teaser" about the article on the front page of the newspaper. Nothing new in the article, except a quote from Sam Tramiel admitting that Atari has focused all of its efforts on the Jaguar and that ". . . Atari won't have any cushion if Jaguar is a bust."
No, I can't display the text of the article electronically, and I'm not about to re-type it, either. Go to your local library if you're interested. :-)

As for STalker loosing characters, try turning off your blitter chip (if you
have one) and also turning off Warp9/QuickST (again, if you have it). Let
me know if it helps!

Maybe some kind soul in Net Land can help me out. Recently I upgraded my Gemulator to version 3.0. This version will also support the Magic Sac so naturally I dug around and obtained a (legitimate) copy of the Magic Sac hardware and software. Now here's my problem, I have version 5.9 of the Magic Sac and apparently the Gemulator doesn't like this version. I talked to Darek Mihoka and he has been using version 3.0 of the the Sac software and it appears to work fine.

Is there anyone out there that could mail or e-mail me a copy of version 3.0 of the Magic Sac software. Since I already own a later version of the software, copyrights should not be a problem. I can verify that I have a legitimate copy for those fearing that I am a pirate (well, not this time at least :))

Thanks in advance,

This sounds like you have killed your Floppy-disk-controller and not
the drive.But if it's really the drive then buy a naked TEAC,NEC or
whatever - every drive will do it.

By the time that the cdrom option is released and the Jaguar is manufactured in volume, the price of cd30 will decline to the Jaguar's price point. Plus 3do will be sold by many firms with advertising budgets.

Are you sure he wasn't referring to version 3.0 of Spectre? Spectre
was the replacement for Magic Sac, for those just tuning in... *grin*

Also, I had read that Gemulator emphatically DOES NOT support Dave
Small's Mac emulators! That was a major gripe in the Gemulator
article in Current Notes a while back...

[lots of .sigs deleted...]

Actually, I'm looking for newer Spectre software myself... I got a
Spectre 128 (NOT GCR) used from the net without original docs or
disks... Just a homemade disk of "most" of the software and the
cartridge itself... It's software version 2.0... Was there a newer
version of the 128 released? Can someone point me toward said
software? Will the GCR software work with a 128?

thanks,
.s.

520ST with 4m ram, marginal operation. Ask. . . . $200

DMA Switchbox for ST's. Use to flip laser or other DMA devices
(hard drives, tape backups, Syquests) between 1-4 computers.
Includes 3 dma cables. . . . . $ 70

Atari 130XE complete computer system with at least 500-800 disks,
XF551 DSDD 360K Disk drive, P:R: interface, tape drive,
Sparta-Dos on cartridge. Many extras.
Will swap for a HP Deskjet. $150

Serial Interface for Atari Portfolio Palmtop Computer. . . $ 40

Practical Solutions cordless infrared Mouse. . . . $ 50

Golden Image Pen Mouse for Atari or Amiga. . . . $ 40

< MISC >

Heathkit Amber Composite Monitor. . . . . $ 40

Macintosh 512KE. No keyboard. Works fine.
Has 128K roms if you need them for an emulator. . . $100

XT case with 150W power supply and mounting for ICD host, 2 fans,
cabling to run a 520 ST and 3.5/5.25 floppy drives. Has been shortened
6" so will fit underneath the monitor. ICD host negotiable.
Two 3.5" floppies drive, and SCSI cable for a HD. . . $100

Low profile 5.25 case with ICD ADscsi Host. Add a drive and go! .
Used to be my SyQuest box. $100

Stereo Amp. Great for the PC. . . . . $ 25

ADC Video Shaper. Used for picture enhancement when dubbing
from one VCR to another. . . . . $ 75

Sony Portable CD player. Nicad Battery with 3-5 hours capacity,
carrying case and power supply. $125

Packing and shipping not included. Prices are negotiable. Any reasonable
offer will NOT be laughed at. Lets talk!

1282. Pure Pascal Demo.....

Newsgroup: comp.sys.atari.st
Date: 1993-11-05 01:21:47 UTC
From: karlm@highett.mel.dbce.csiro.au
Message-ID: <2bc9rb$5r6@news.dmpe.CSIRO.AU>
Source record: 198960

Anyone remember where the demo of Pure Pascal is? I had a copy of the one with the demo programs, etc., but somehow killed it, and have to get a new copy. I managed to get the earlier version with no demo files, etc. But I would much rather the new version. Anyone know where it is?

Thanx!

Karl.

BTW I think it was on a site in Germany ....

>I would give a restrained warning to anyone thinking of buying
Redacteur. I
>brought it (full version) a week ago and I found it had so many bugs in
it, it
>was unusable. I'm contacting the ST club today to sort out returning
it and
>getting a refund. Shame, because it's fast and has all the features I
need.
Well Del you must be doing something strange or have a bad disk or
something 'cause I've had Redacteur 3.0 for over a year and NEVER had a
problem (that's NEVER) with it crashing or giving me errors. I'll agree
graphics printing is a chore and a kludge but for actually entering and
editing text Red is hard to beat for speed and features (when you move
to multi-font graphical printing programs like That's Write 3,
Calligrapher and Papyrus start to lap it though).

Before you start warning everyone on the net to avoid Red as it doesn't
work you might try a little harder to find out what's wrong and where
the error lies. A lot of people use Redacteur and if there was a serious
bug I'm sure some of us would have heard about it by now.

Windows is now VERY robust - I have difficulty crashing it if I try. Even if a dodgy program fails, the system will stay up. On the Falcon (which has
----

I just couldn't let this pass - I use Windows every day at work, and I find in general that many programs will not only crash, but afterwards make any other apps I have running act in odd ways until I reboot.

hardware memory protection) a buggy program can still bring the OS down
----
Not if you have memory protection turned on under MTOS...

which is unacceptable for me. And my STe still crashes far too much: on loading auto programs, on running other programs (that bug that stops you executing a program by double clicking from the desktop directly (the OS will not recognise it as a program and ask if you want to show/print it) but will let you select it and then double click to run is completely strange and a real pain) during compilations etc... (usually not while doing ' simple' thing like editing a file).

I has an STE for awile, and never encountered the problem you described.

<some stuff deleted>
Likewise the PC - it may have useless hardware (unless you can pay for 3rd party upgrades) a horrible CPU architecture to program in, but overall it seems to be very stable (I've used Novel on an 18 node net and here at uni on a net several times larger). The net works, MS-DOS works (V6) Windows is armour plated (V3.1, I know 3.0 was easier to crash but even then you could usually say 'This bit of software did it when I tried to do x') and the number of times I've crashed a PC here must be in single figures.
Ideally I'd use a unix system all the time though. They've never given me

undue hassle or looked as if they could do something and then crashed when I

The number of times the various ms-dos machines I have at work crash
can be counted on one hand... but you'll fill that hand every day.

1286. Falcon DSP libraries?

Newsgroup: comp.sys.atari.st
Date: 1993-11-05 03:36:19 UTC
From: h54118@sakura.kudpc.kyoto-u.ac.jp
Message-ID: <h54118.752470579@sakura>
Source record: 198988

Sorry, I'm not up to date:
Got my Falcon only a few days ago and tried this FRAC! demo
by Brainstorm, France.
Using the DSP is much faster than using the 68882...
I need this speed!

How can I utilize the DSP for mathematical operations from
GCC or PureC?

Any hint greatly appreciated,

Christian

1287. I TOLD ME SO!

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

O.K. everyone, let's all say it at once:

I TOLD YOU SO!!!!!!!!!!!!

Unlike a person looking to flame, I am here to apologize for any heart attacks I might have caused with my mis-information about atari stopping support for thier computer lines. I, for one, am relieved. I like my MEGA too much.
But while they haven't dropped support, they aren't making any new ones right now. Can't afford it with the Jag roll out.

BTW, new Jag developers that were announced(there are more but this is who they said) include INTERPLAY, ACCOLADE, MICROPROSE, UBI SOFT, GREMILIN, MILLENIUM, and VIRGIN.

-Mark Santora
-standing up for my punishment from Flames R Us :-)

BTW, I'm looking for a new broker, any suggestions?

1289. Looking for music program

Newsgroup: comp.sys.atari.st
Date: 1993-11-05 05:46:49 UTC
From: bthompso@neumann.une.edu.au
Message-ID: <2484@grivel.une.edu.au>
Source record: 198964

Having realized that I had 4 1Meg SIMMS sitting around doing nothing, I stuck them in the faithful old 1040STe the other day. This has led to a renewed enthusiasm for writing music, which is what I bought the ST for in the first place. However, my modules, etc. are back at home, and I only have a keyboard with me. What I'm looking for is something like a sequencer, which will allow me to compose music using the ST's own sound chip. I would assume that stuff like this is available, but it'd be neat if it had features such as sample playback, and note input via a MIDI keyboard.

1291. Bob Brodie realtime conference (long message)

Newsgroup: comp.sys.atari.st
Date: 1993-11-05 07:06:27 UTC
From: anisko@usdtsg.DaytonOH.NCR.COM
Message-ID: <1537@usdtsg.DaytonOH.NCR.COM>
Source record: 198971

For those folks interested in the Bob Brodie/Atari realtime conference on GEnie last night, the following is my capture of the RTC. It's not a very edited capture, so forgive the messiness...

Anyways, credit for this RTC, copyright, etc, goes to GEnie and Atari Corp. (I'm new at this legal stuff, so bear with me :-) All trademarks, etc owned by their respective owners. Void where prohibited. Ex Pluribus Unim. Que sera sera...

(if anyone has the Thursday Nov 4, 1993 USA Today - check out page 1D - has an article on the video game industry, with a picture of the Jaguar right there in full color!)

And away we go...

----------start transcript----------

<[HoST] ST.LOU> I know there are a lot of new users here tonight... so welcome
<[HoST] ST.LOU> Everyone.... please use the /nam command.... eg.... /nam Bob or /nam Lou, etc.
<[HoST] ST.LOU> Please use YOUR name.... not mine or Bob's <grin>
<[HoST] ST.LOU> Before getting started, some business about how an RTC works.
<[HoST] ST.LOU>
<[HoST] ST.LOU> While the RTC room is in Listen-Only mode, you can only address
<[HoST] ST.LOU> our guest when I let you talk.
<[HoST] ST.LOU>
<[HoST] ST.LOU> To get my attention, just /RAIse your hand. Just enter this from
<[HoST] ST.LOU> your keyboard: /rai
<[HoST] ST.LOU>
<[HoST] ST.LOU> I'll acknowledge your raised hand as soon as I can, but please be
<[HoST] ST.LOU> patient. I will let you know when your turn is coming up.
<[HoST] ST.LOU>
<[HoST] ST.LOU> Some other RTC commands are:
<[HoST] ST.LOU>
<[HoST] ST.LOU> /hel - Lists all RTC commands.
<[HoST] ST.LOU> /sta - Status (list) of everyone in the RTC room.
<[HoST] ST.LOU> /exi - Exit the RTC, but you remain logged onto GEnie.
<[HoST] ST.LOU> /bye - Log off of GEnie directly from the RTC.
<[HoST] ST.LOU> /rai - Raise your hand. Lets me know you wish to address our guest.

<[HoST] ST.LOU> /nam - Lets you change your nickname.
<[HoST] ST.LOU> This is the night we've been eagerly anticipating ... the
official
<[HoST] ST.LOU> Jaguar roll out from New York City with a live report on the
news
<[HoST] ST.LOU> conference held just two hours ago.
<[HoST] ST.LOU> As usual for our Dateline Atari RTC's, our special guest is the
<[HoST] ST.LOU> Director of Communications, Bob Brodie. Despite a very hectic
and
<[HoST] ST.LOU> exciting day, Bob has chosen to give GEnie users the first
accounts of
<[HoST] ST.LOU> this evening's news conference.
<[HoST] ST.LOU> Elsewhere in the Atari ST RoundTable there is growing excitement
<[HoST] ST.LOU> about the Jaguar, the host of new game developers and the
unbelievable
<[HoST] ST.LOU> climb of Atari stock which hit a high of 12 1/8 today!

<[HoST] ST.LOU> Before we begin, a special welcome to all new participants in
the Real
<[HoST] ST.LOU> Time Conference - and a friendly 'welcome back' to our growing
number
<[HoST] ST.LOU> of regulars. This evening's conference may get quite busy at my
end so
<[HoST] ST.LOU> please be patient and I will queue you for your questions and
comments
<[HoST] ST.LOU> as soon as I can.
<[HoST] ST.LOU> Now, without further ado, heeeeeeeere's Bob!
<[HoST] ST.LOU>
<[Bob & Ron] BOB-BRODIE> Thanks, Lou. We have a very brief account of the
evening that
<[Bob & Ron] BOB-BRODIE> we'd like to upload at this time, then we'll be happy
to take
<[Bob & Ron] BOB-BRODIE> any and all questions from the audience. I'd like to
express
<[Bob & Ron] BOB-BRODIE> how very excited Ron and I are to be here tonight on
Atari's
<[Bob & Ron] BOB-BRODIE> official online service: GEnie!!! The size of the
group here
<[Bob & Ron] BOB-BRODIE> tonight is just wonderful, and really helps to show
the high
<[Bob & Ron] BOB-BRODIE> level of interest in the Jaguar. With that, here
comes our
<[Bob & Ron] BOB-BRODIE> prepared remarks.
<[Bob & Ron] BOB-BRODIE> Welcome one and all!! We have just returned from the
jungle!! Atari
<[Bob & Ron] BOB-BRODIE> has just rolled out the 64-bit home entertainment
system to a standing
<[Bob & Ron] BOB-BRODIE> room only audience on the 48th floor of the Time-Life
Building in New
<[Bob & Ron] BOB-BRODIE> York City.

<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> I am joined here tonight with my wife Jerri, Ron Kovacs and John
<[Bob & Ron] BOB-BRODIE> Gagne of the Z*Net News Service. We are coming to you live from the
<[Bob & Ron] BOB-BRODIE> Paramount Hotel on 46th St in Manhattan. We invited the cast from
<[Bob & Ron] BOB-BRODIE> Les Miserables, but they were too busy to attend. :) They're just
<[Bob & Ron] BOB-BRODIE> across the street.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> What we have witnessed tonight is a new era for Atari Corporation.
<[Bob & Ron] BOB-BRODIE> The introduction and announcement of release of the Jaguar, a 64-Bit
<[Bob & Ron] BOB-BRODIE> home entertainment machine. On hand at the press conference were Jack
<[Bob & Ron] BOB-BRODIE> Tramiel, sons Sam, Leonard and Garry, myself, Bill Rehbock, James
<[Bob & Ron] BOB-BRODIE> Grunke, Augie Ligouri, Terry Valeski, John Skruch, Susan McBride,
<[Bob & Ron] BOB-BRODIE> Purple Hampton, and many other staff members from Sunnyvale.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Major press agencies such as CBS,NBC, ABC, CNN and local reporters from
<[Bob & Ron] BOB-BRODIE> the New York Times, Wall Street Journal, entertainment and Atari media
<[Bob & Ron] BOB-BRODIE> were in attendance at the event. Heard from nearly ALL of the
<[Bob & Ron] BOB-BRODIE> attendees were WOW and shouts of excitement from the presentation
<[Bob & Ron] BOB-BRODIE> hosted by Sam Tramiel.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Guests were greeted by three male and female jet black leather and
<[Bob & Ron] BOB-BRODIE> vinyl costumed jaguar cats. Tropical foliage, flowering bamboo, moist
<[Bob & Ron] BOB-BRODIE> fog, blue and green tinted pin spots and animal cries, deep from
<[Bob & Ron] BOB-BRODIE> within the heart of the jungle.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Inside the concept changed dramatically, encircling the entire event
<[Bob & Ron] BOB-BRODIE> were Atari Jaguar and Lynx kiosks accented with blue neon rods, ice
<[Bob & Ron] BOB-BRODIE> blue pin spots and more tropical foliage. Positioned in two corners
<[Bob & Ron] BOB-BRODIE> of the room were wire caged with the jaguar costumed dancers.

<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Sam gave a presentation, accompanied by video displays
of the Jaguar
<[Bob & Ron] BOB-BRODIE> TV commercial, and sales videos for the retail stores.
There was no
<[Bob & Ron] BOB-BRODIE> expense spared to convey the messages to the attendees
that Atari is
<[Bob & Ron] BOB-BRODIE> serious about marketing the Jaguar. No less than 12
screens
<[Bob & Ron] BOB-BRODIE> positioned throughout the room carried the video, as
well as Jaguar
<[Bob & Ron] BOB-BRODIE> game play. 10 Jaguar kiosks were stationed throughout
the room, each
<[Bob & Ron] BOB-BRODIE> showing a different video game title. John Skruch and
other
<[Bob & Ron] BOB-BRODIE> employees were also prowling the crowd with
pre-production EPROM carts
<[Bob & Ron] BOB-BRODIE> in hand, ready to show the visitors the future of
Jaguar gaming.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Atari announced the signing of a number of new
developers for the
<[Bob & Ron] BOB-BRODIE> Jaguar tonight, including Virgin, Interplay,
Microprose, UBI Soft,
<[Bob & Ron] BOB-BRODIE> Gremlins Graphics, Millenium, and Accolade. Accolade
will bring
<[Bob & Ron] BOB-BRODIE> Bobsy, Jack Nicklaus Gold, Al Michaels Announces Hard
Ball, Brett
<[Bob & Ron] BOB-BRODIE> Hull Hockey, and Charles Barkley Basketball to the
Jaguar. Atari
<[Bob & Ron] BOB-BRODIE> Games announced that they will be using the Jaguar as
a board for
<[Bob & Ron] BOB-BRODIE> their arcade games. There will be a few other
developers that will be
<[Bob & Ron] BOB-BRODIE> announced in a press release a little later on, as
well as more
<[Bob & Ron] BOB-BRODIE> details regarding the specific titles that they will
be developing for
<[Bob & Ron] BOB-BRODIE> the Jaguar.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Tonight, it was also brought to my attention that
there are
<[Bob & Ron] BOB-BRODIE> reports circulating stating that we have stopped our
computer
<[Bob & Ron] BOB-BRODIE> business. I'm happy to state that this rumor is 100%
FALSE!
<[HoST] ST.LOU> YEA!!!!!
<[Bob & Ron] BOB-BRODIE> Atari is not leaving the computer business, we are
still
<[Bob & Ron] BOB-BRODIE> producing the Atari Falcon030. Just a few weeks ago,

James
<[Bob & Ron] BOB-BRODIE> Grunke was here in New York for the Audio Engineering Society
<[Bob & Ron] BOB-BRODIE> Show, where Cubase Audio for Falcon by Steinberg was released. We
<[Bob & Ron] BOB-BRODIE> feel that the Falcon is just now starting to see applications tha
<[Bob & Ron] BOB-BRODIE> take advantage of it's unique capabilities.
<[Bob & Ron] BOB-BRODIE> With that, we're ready to take any questions about the event
<[Bob & Ron] BOB-BRODIE> tonight, Lou, or anything else that our users might like to ask
<[Bob & Ron] BOB-BRODIE> either Ron or I about. ga
<[HoST] ST.LOU> Thanks Bob...
<[HoST] ST.LOU> They're lined up and ready.
<[HoST] ST.LOU> First we have Dave...
<[Dave] D.SHORR> Congrats on the Jaguar, Bob! I did have a computer question but as I'm the first person at the mike, I'll change it;): will I be able to use my Atari SC1224 color monitor with the Jaguar? GA.
** <[HoST] ST.LOU> Room is now listen-only.
<[Bob & Ron] BOB-BRODIE> Hi Dave, yes....you will be able to use youe SC1224 or your
<[Bob & Ron] BOB-BRODIE> SC1435 with the Jaguar. In fact, we'll be using the SC1224 in th
<[Bob & Ron] BOB-BRODIE> in store interactive Kiosks that we're designing. It will requir
<[Bob & Ron] BOB-BRODIE> you to have the optional RGB cable to use the SC1224 with the
<[HoST] ST.LOU> Folks, so many hands just went up it will take a few minutes to acknowledge you all. Please use the /RAI command only once.
<[Bob & Ron] BOB-BRODIE> Jaguar, though. It's a great picture. :) GA
<[HoST] ST.LOU> Next up we have Scott
<[ScottJ] S.CORLEY1> Bob, could you give us an idea as to when Jaguars will be released nationwide? Also, is Atari going to put out a promotional videotape like the one put out by Panasonic for 3d0? It was really impressive. GA.
<[Bob & Ron] BOB-BRODIE> The Jaguar will be sold nationally next year. If you live in an
<[Bob & Ron] BOB-BRODIE> area where the Jaguar is not presently being sold, but wish to
<[Bob & Ron] BOB-BRODIE> purchase on, you can do so via our customer service department.
<[Bob & Ron] BOB-BRODIE> I'll pass all of the information on purchasing a Jaguar to
<[Bob & Ron] BOB-BRODIE> Atari Explorer Online so they can write it up for everyone. We
<[Bob & Ron] BOB-BRODIE> showed the videos tonight at the launch event, and they were
<[Bob & Ron] BOB-BRODIE> very well received. One of them is designed to be run as a
<[Bob & Ron] BOB-BRODIE> commercial, "sandwiched" around another commercial.

<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> OK... Grahan
<[HoST] ST.LOU> Graham Norton is next. GA
<[Graham] G.NORTON> Bob can we expect the Jags in Canada Jan 1?
<[Graham] G.NORTON> Also do you have any cheap Atari stock to sell! :)
<[Graham] G.NORTON> GA
<[Bob & Ron] BOB-BRODIE> I'm honestly not sure what timeframe we're looking at for Canada
<[Bob & Ron] BOB-BRODIE> Graham :) Cheap stock? Not this week!! :) :)
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Thanks Bob.... on to Nevin Shalit.
<[NevMan] NEVIN-S> Thanks. I have two questions. First, is the Jaguar in production, or were
<[NevMan] NEVIN-S> you showing a prototype? Second, on a more personal note, how did it feel
<[NevMan] NEVIN-S> tonight after years of struggling in the computer market to get the press
<[NevMan] NEVIN-S> to pay attention to you, to have them all there in that room? ga
<[Bob & Ron] BOB-BRODIE> Yes, the Jaguar is in production...but we did show units from the
<[Bob & Ron] BOB-BRODIE> pilot production run that was done first. Re you're second
<[Bob & Ron] BOB-BRODIE> question, it was very nice. Especially nice was to meet so many
<[Bob & Ron] BOB-BRODIE> of the international press members that I have read about or
<[Bob & Ron] BOB-BRODIE> corresponded with over the years. I met with Steve Young of CNN
<[Bob & Ron] BOB-BRODIE> today and spoke with him before and after his filmed interview
<[Bob & Ron] BOB-BRODIE> with Sam. (Boy does he hate Windows!) Paula Richards of ST Format
<[Bob & Ron] BOB-BRODIE> was also on hand, and I really enjoyed getting to talk with her.
<[Bob & Ron] BOB-BRODIE> All in all, a really exciting experience. I know that Ron
<[Bob & Ron] BOB-BRODIE> enjoyed getting to meet the Tramiels. All of them, including
<[Bob & Ron] BOB-BRODIE> Jack were very happy to meet one of thier longest, and best
<[Bob & Ron] BOB-BRODIE> known supporters. When Sam was introduced to Ron, he spent
<[Bob & Ron] BOB-BRODIE> quite a bit of his time letting Ron know how much he appreciated
<[Bob & Ron] BOB-BRODIE> his many years of service to the Atari Community.
<[Bob & Ron] BOB-BRODIE> I like him, too. :)
<[Bob & Ron] BOB-BRODIE> Hope that covered it, Nevin. :)
<[HoST] ST.LOU> Whew.... so many people in the queue... new experience :-)
<[HoST] ST.LOU> Thanks everyone for being patient

<[HoST] ST.LOU> On to Ed Lin
<[Ed] E.LIN1> how do the initial Jaguar games compare to the 3DO in terms of graaphics?
<[Bob & Ron] BOB-BRODIE> Ed, I have only seen Crash 'n Burn. It's a different sort of
<[Bob & Ron] BOB-BRODIE> game than we have done so far. We've provided a number of
<[Bob & Ron] BOB-BRODIE> screen shots that are available for downloading from the ST RT
<[Bob & Ron] BOB-BRODIE> library via Atari Explorer Online Magazine. Rather than Ron and
<[Bob & Ron] BOB-BRODIE> I giving you our opinion, why don't you download the Jaguar pics
<[Bob & Ron] BOB-BRODIE> yourself and take a look at them? I'm sure that you'll be
<[Bob & Ron] BOB-BRODIE> very impressed with them. Especially Crescent Galaxy! :) ga
<[HoST] ST.LOU> Sean Dougherty from Processor Direct, the newest Atari magazine, is next...
<[Sean@TWP] P-DIRECT> Bob -- To change the topic a little, Atari may still be producing the Falcon030, but with perhaps only a few thousand units sold it is obvious something more needs to be done than make them. <grin>
<[Sean@TWP] P-DIRECT> Does Atari have plans to sell the Falcon030 through less passive means? For instance, with the help of some enthused writers, the Falcon030 has gained the interest of several special interest magazines, and it seems this would be the perfect way to "sneak" into a market, and at very little expense... GA
<[Bob & Ron] BOB-BRODIE> Sean, at this point we have no such plans. We're always...
<[Bob & Ron] BOB-BRODIE> interested in listening to proposals, though. I'd suggest that
<[Bob & Ron] BOB-BRODIE> you contact Garry Tramiel if you have some suggestions about
<[Bob & Ron] BOB-BRODIE> selling the Falcon030 via a unique means. :)
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Thanks Sean. Rob Anisko is next
<[Zombie] R.ANISKO> ok (home the buffer works here...)
<[Zombie] R.ANISKO> Bob, with the Jaguar about to come out, and the Lynx
<[Zombie] R.ANISKO> available, is Atari planning on releasing the same
<[Zombie] R.ANISKO> games on both systems - it makes nice cross-over
<[Zombie] R.ANISKO> sales and advertising... (like Nint*ndo w/ the SNES and
<[Zombie] R.ANISKO> Gameboy)? ga
<[Zombie] R.ANISKO>
<[HoST] ST.LOU> It worked!
<[HoST] ST.LOU> :-)
<[Bob & Ron] BOB-BRODIE> Yes and no, Rob. :)
<[Bob & Ron] BOB-BRODIE> There is no question that there is some terrific opportunities to
<[Bob & Ron] BOB-BRODIE> do EXACTLY what you've described. However, on the other hand we

<[Bob & Ron] BOB-BRODIE> know that the hand held market is no where as big as the home
<[Bob & Ron] BOB-BRODIE> console market. Plus, the Jaguar makes possible things that canno
<[Bob & Ron] BOB-BRODIE> be done on ANY OTHER GAME MACHINE, including the Lynx. So it's
<[Bob & Ron] BOB-BRODIE> only natural, IMHO, that developers will look to do something
<[Bob & Ron] BOB-BRODIE> new and exciting to stretch the envelope with the Jaguar. We do
<[Bob & Ron] BOB-BRODIE> envision there being some titles that will be made available for
<[Bob & Ron] BOB-BRODIE> the Lynx as well though. ga
<[HoST] ST.LOU> We still have more than 20 in the queue... on to Dale Ellis....
<[Dale] D.ELLIS16> Congrads Bob, Ron, John, Jerri. Jerri was Bob really there or across the street at Les Miserables? ;-) Real Questions:Have you thought about selling any of the products via TV Shopping? Any TV shows about the Jag? Like Discovery or .....
<[Dale] D.ELLIS16> FutureWatch? GA
<[Bob & Ron] BOB-BRODIE> Jerri says he was really there...thanks for checking up on him.
<[Bob & Ron] BOB-BRODIE> Now, on to the "real" questions, we are open to all of those
<[Bob & Ron] BOB-BRODIE> opportunities, but first want to get back into the "regular"
<[Bob & Ron] BOB-BRODIE> retail environment. We feel that it is important that consumers
<[Bob & Ron] BOB-BRODIE> be able to go into a store and actually see, and try out a
<[Bob & Ron] BOB-BRODIE> Jaguar to fully appreciate it. So we're very excited to be
<[Bob & Ron] BOB-BRODIE> in stores like Toys 'R Us, The Wiz, Babbages, Electronic Boutique
<[Bob & Ron] BOB-BRODIE> Kaybee Toys....and others.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Mark Santora... if you are still here, please /raise. Your number has gone bye bye
<[HoST] ST.LOU> Meanwhile, on to Gary
<[Gary] G.STOLLMAN> Bob, I am interested in programming for Atari as a developer. In your honest opinion, is this release the "do-it" thing that will put Atari back in the forefront of computers,and why is it taking so long for the Falcon to get software???
<[Gary] G.STOLLMAN> ga
<[Bob & Ron] BOB-BRODIE> Hi Gary. Yes, I think that the Jaguar is going to be a very
<[Bob & Ron] BOB-BRODIE> big product for Atari. If you hae aspirations about developing
<[Bob & Ron] BOB-BRODIE> for the Jaguar, I'm sure that Bill Rehbock would like to talk
<[Bob & Ron] BOB-BRODIE> to you. Re the Falcon...I think there are several

reasons that
<[Bob & Ron] BOB-BRODIE> it's taking so long. #1 - Poor Sales. The economy in
California
<[Bob & Ron] BOB-BRODIE> where we do much of our business, is MISERABLE. And
it's true
<[Bob & Ron] BOB-BRODIE> not only for Atari, but other companies as well. One
of the
<[Bob & Ron] BOB-BRODIE> stock analysts that was at the event tonight told me
that
<[Bob & Ron] BOB-BRODIE> Apple is now sitting on a HUGE inventory of products.
He said
<[Bob & Ron] BOB-BRODIE> numbers that frankly, I had a hard time believing. So,
the
<[Bob & Ron] BOB-BRODIE> computer hardware business is just really tough right
now. One of
<[Bob & Ron] BOB-BRODIE> the other reasons it's taking so long is us: we've
reduced our
<[Bob & Ron] BOB-BRODIE> company in size to such a small level that it is
really tough
<[Bob & Ron] BOB-BRODIE> to be able to do everything that we would like to be
able to do.
<[Bob & Ron] BOB-BRODIE> For example, there was some staff at the event tonight
from
<[Bob & Ron] BOB-BRODIE> ST Informer. But I never had a chance to spend more
than a few
<[Bob & Ron] BOB-BRODIE> seconds with them at a time. I hate that, frankly.
And think
<[Bob & Ron] BOB-BRODIE> that once we've added some additional staff we'll be
in a
<[Bob & Ron] BOB-BRODIE> better position to do the things that we need to do to
properly
<[Bob & Ron] BOB-BRODIE> support ALL of our products. GA
<[HoST] ST.LOU> Thanks Bob. Please welcome Delroy Blake!
<[delroy Blake] D.BLAKE> I have 3 questions for you.
<[delroy Blake] D.BLAKE> 1) What are the specs on the Jag over sees news
travels slow
<[delroy Blake] D.BLAKE> 2) do you inted to market to the Army-AirForce Excange
Stores Lots of people
<[delroy Blake] D.BLAKE> with money to spend and
<[delroy Blake] D.BLAKE> 3) What ever happen to UNIX FOR THE TT,
<[delroy Blake] D.BLAKE> ga
<[Bob & Ron] BOB-BRODIE> Good evening Delroy, thank you for attending our RTC
tonight!!!
<[Bob & Ron] BOB-BRODIE> Regarding your questions....WOW! :) I'll give you a
quick
<[Bob & Ron] BOB-BRODIE> run down on the specs, but I'd prefer that you check
out the
<[Bob & Ron] BOB-BRODIE> library here on GEnie in the ST RT for file
AEO_SE1.ZIP
<[Bob & Ron] BOB-BRODIE> That file has full set of press releases including

block diagrams
<[Bob & Ron] BOB-BRODIE> of the entire Jaguar system. The Jaguar is a full 64 bit system
<[Bob & Ron] BOB-BRODIE> that has 5 microprocessors on three chips, including a 64 Bit
<[Bob & Ron] BOB-BRODIE> RISC processor, a 32 Bit RISC processor, and a 68000. The bus
<[Bob & Ron] BOB-BRODIE> is a full 64 bit bus. It is capable of 32 bit color, with over
<[Bob & Ron] BOB-BRODIE> 16.7 million colors, and 16 bit stereo CD sound. BTW, I've just
<[Bob & Ron] BOB-BRODIE> been informed by Travis Guy, Editor of AEO that the correct file
<[Bob & Ron] BOB-BRODIE> name is AEO_SE_J.ZIP :) Thanks, Travis. The file will also
<[Bob & Ron] BOB-BRODIE> have some Jaguar screen shots in it in GIF format. :) Re the
<[Bob & Ron] BOB-BRODIE> Army/Air Force stuff....not right away, but maybe next year. At
<[Bob & Ron] BOB-BRODIE> first we're doing a New York/San Francisco rollout of the
<[Bob & Ron] BOB-BRODIE> Jaguar this year, then we'll finish our plans for the rest of
<[Bob & Ron] BOB-BRODIE> the US later. Certainly, we want to find a way to provide the
<[Bob & Ron] BOB-BRODIE> Jaguar to the Military. Lastly, re TT UNIX, we cancelled the
<[Bob & Ron] BOB-BRODIE> project because we didn't feel that our version of UNIX was
<[Bob & Ron] BOB-BRODIE> cost effective enough to be chosen by a broad base of people.
<[Bob & Ron] BOB-BRODIE> We did feel that Atari UNIX could have been run as a text based
<[Bob & Ron] BOB-BRODIE> UNIX on the Falcon, but we couldn't have close to being able to
<[Bob & Ron] BOB-BRODIE> support it properly, so we cancelled it. GA
<[HoST] ST.LOU> Bob, there are over 20 in the queue and they are being extremely patient with me as I try to keep up. :-) Our next speaker is Chris Oates...
<[Chris] C.OATES2> Two questions: First, when might we see the first Jaguar TV ads? Second, about how many Jaguars have been manufactued to date?
<[Chris] C.OATES2> GA
<[Bob & Ron] BOB-BRODIE> Lou, in light of all the people in line, I think we should
<[Bob & Ron] BOB-BRODIE> restrict everyone after Chris to just one question til we get
<[Bob & Ron] BOB-BRODIE> through the que.
<[HoST] ST.LOU> ... or you could just answer ONE question :-)
<[Bob & Ron] BOB-BRODIE> Chris, in the areas that the Jaguar is going to be sold (NY or

<[Bob & Ron] BOB-BRODIE> San Francisco) you'll start to see teaser ads next
week. The
<[Bob & Ron] BOB-BRODIE> "real ads" will start shortly after that. Re how many
Jags have
<[Bob & Ron] BOB-BRODIE> been built, to be honest, I don't know. I'd need to
check with
<[Bob & Ron] BOB-BRODIE> our VP of Manufacturing....he's not here. It's an
incredibly
<[Bob & Ron] BOB-BRODIE> small hotel room. :)
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> OK... Sir Fransis is next
<[Sir Fransis] K.DRAKE> What do you forsee being the first network use for the
Jaguar (Other than ComLynx)
<[Sir Fransis] K.DRAKE> ga
<[Bob & Ron] BOB-BRODIE> I really don't know. :) I haven't had enough time to
think
<[Bob & Ron] BOB-BRODIE> about that yet. For the most part, we've been looking
at the
<[Bob & Ron] BOB-BRODIE> system as a game machine for the home to compete
against Sega
<[Bob & Ron] BOB-BRODIE> and Nintendo, not so much as a network machine. I do
know that
<[Bob & Ron] BOB-BRODIE> Sam is very keenly interested in interactive TV via
cable. ga
<[HoST] ST.LOU> Tony Wetmore is next Bob.
<[Tony Tramiel] WETMORE> Bob and everyone: Bravo! You've all done an
incredible job!
<[Tony Tramiel] WETMORE> I have 2 questions, but they're related... (actually,
I have more)
<[Tony Tramiel] WETMORE> 3) Will I be able to mail-order a Jag from Atari this
month?
<[Tony Tramiel] WETMORE> 4) If not, when will retail stores in NY begin
receiving Jags?
<[Tony Tramiel] WETMORE> (oops)
** <[Tony] WETMORE> was <[Tony Tramiel] WETMORE>.
<[Bob & Ron] BOB-BRODIE> Yes, and the week before Thanksgiving is when they are
due in.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Chris Cassaday....
<[Chris] C.CASSADAY> Bob, can you comment about the possible Dallas
distribution point?
<[Chris] C.CASSADAY> Will the Jaguar be sold at the Incredible Universe this
fall? GA
<[Bob & Ron] BOB-BRODIE> I've not been told officially that we're going to be
there,
<[Bob & Ron] BOB-BRODIE> but I hear tell that we are, Chris.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Sam Rapp!
<[Sam030] SAM-RAPP> Hi Bob, Ron, (and others...) What are the possibilities for
a modem

<[Sam030] SAM-RAPP> for the Jag? Is there an RS-232 on the expansion port? Where is my
<[Sam030] SAM-RAPP> T-shirt! ;-)
<[Sam030] SAM-RAPP> GA
<[Bob & Ron] BOB-BRODIE> Sam, Ron Kovacs is wearing your T-Shirt. He looks great in it.
<[Bob & Ron] BOB-BRODIE> So does John Gagne. We're also going to bring out baseball caps.
<[Bob & Ron] BOB-BRODIE> Black with a Jaguar logo, sort of like the T-Shirt.
<[Bob & Ron] BOB-BRODIE> Yes, there is an RS-232 on the expansion port, and we envision
<[Bob & Ron] BOB-BRODIE> using the DSP connection to be a modem. ga
<[HoST] ST.LOU> Thanks. I am sorry to say that I will have to cut off any more /raises.
<[HoST] ST.LOU> There are still 20 in the queue who will be allowed their questions.
<[HoST] ST.LOU> Dave Shorr is next
<[Dave] D.SHORR> Has Atari considered offering a cooperative multitasking environment to its ST customers? Couldn't the multitasking AES and Desktop contained in the current version of MultiTOS be loaded without MiNT? GA.
<[Bob & Ron] BOB-BRODIE> Dave, I'm just not techincal enough to discuss that with you.
<[Bob & Ron] BOB-BRODIE> The best solution that I can see now is to use MultiTOS with
<[Bob & Ron] BOB-BRODIE> Geneva from Gribnif Software.
<[Bob & Ron] BOB-BRODIE> Sorry, GA.
<[HoST] ST.LOU> Ron Hall is next, Bob
<[GOT FALCON!] R.HALL49> More than 1 question but only requires small answers! :) I just yesterday got my base unit Falcon(yea!) when can I get an official hard drive upgrade kit? Will Atari be able to challenge CD-32 in Europe since they are producing 20,000 units a week now? Tantalize me with visions of a Lynx II with the Jaguar chipset!!! Final Question...Jaguar sales truly to be funneled to Falcon!!! (hope,hope,hope) LOVE my Falcon BTW...thanx GA
<[Bob & Ron] BOB-BRODIE> Don't know about the HD kit, get a SCSI-II cable and go external
<[Bob & Ron] BOB-BRODIE> for now. The drives are bigger and cheaper than the tiny IDEs.
<[Bob & Ron] BOB-BRODIE> We will not challenge CD-32 in Europe...we will defeat them.
<[Bob & Ron] BOB-BRODIE> Yes. ga
<[HoST] ST.LOU> Kevin Houser...
<[Kevin Houser] PG.MUSIC> Bob, any hope for a Falcon based dev system for the Jag &/or Lynx? Also, could I get a 'factory' direct Jag when I go to Charlotte this weekend. <g> I'm interested in doing music related Jag titles. Doezit have a Midi port? <g> Kevin in Atlanta, PG Music Atari development... BTW, all PG Music stuff (new) is written on a Falcon030/14/120 <g> Good European sales too. :) ... GA
<[Bob & Ron] BOB-BRODIE> Hi Kevin. Yes, there is a TOS based dev system for the Jaguar
<[Bob & Ron] BOB-BRODIE> now. I think it is quite logical to assume that it

will be
<[Bob & Ron] BOB-BRODIE> ported to the Falcon. Sorry, IBM is not selling the Jaguar
<[Bob & Ron] BOB-BRODIE> Factory Direct at all. They build it, warehouse it, and ship it.
<[Bob & Ron] BOB-BRODIE> That's all. No MIDI port, but wow! It can make terrific music!!
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Charles Smeton of NewSTar Tech....
<[NewSTar Tech] C.S.SMETON> Bob, where (what stores) and when can I tell my buddy in NYC to buy a Jaguar for me? ga
<[Bob & Ron] BOB-BRODIE> The Wiz, Babbages, Toys 'R Us, Electronic Boutique, Kaybee Toys,
<[Bob & Ron] BOB-BRODIE> that enough Charles? GA
<[HoST] ST.LOU> Here comes Travis Guy from Atari Explorer Online... the best source of Atari news!
<[FSU #1!] AEO.MAG> Thanks Lou! <blush>
<[FSU #1!] AEO.MAG> Evening sirs! It sounds like everyone had a great time tonight. Bob, I think I
<[HoST] ST.LOU> Hi Andy. You are two away. Have question ready and wait for talk-mode signal.
<[HoST] ST.LOU> Ooops.
<[HoST] ST.LOU> :-)
<[Bob & Ron] BOB-BRODIE> OK Lou.
<[FSU #1!] AEO.MAG> can speak for every Atarians in saying it's good to finally have Atari back on track
<[FSU #1!] AEO.MAG> to the forefront - where we feel Atari belongs. Can you give us some specific
<[FSU #1!] AEO.MAG> reactions from some of the crowd at the event? Paul Harvey mentioned Atari and
<[FSU #1!] AEO.MAG> the Jaguar today in his radio show, and it was very positive. Go Atari!
<[Bob & Ron] BOB-BRODIE> Evening, Travis! It's great to see you online tonight!! Ron
<[FSU #1!] AEO.MAG> (And I want a Jaguar cap!) GA
<[Bob & Ron] BOB-BRODIE> sez Hi!! We at Atari are very grateful for the fine job that you
<[Bob & Ron] BOB-BRODIE> and rest of the very fine staff at Atari Explorer Online do to
<[Bob & Ron] BOB-BRODIE> support the entire Atari Community. If only all publications
<[Bob & Ron] BOB-BRODIE> would follow your excellent example of how to do an online mag!
<[Bob & Ron] BOB-BRODIE> (Well, I can dream, can't I?!?!?!)
<[Bob & Ron] BOB-BRODIE> Today, USA Today ran a very nice article about Video Games, and
<[Bob & Ron] BOB-BRODIE> featured a full color picture of the Jaguar on the LIFE Section
<[FSU #1!] AEO.MAG> Bob, any magazine in particular you'd like to see "shape up?"

<[Bob & Ron] BOB-BRODIE> of the paper. The San Jose Mercury News also ran a terrific
<[Bob & Ron] BOB-BRODIE> article on the Jaguar. Many of the people that were at the
<[Bob & Ron] BOB-BRODIE> event tonight were financial writers, or business writers. They
<[Bob & Ron] BOB-BRODIE> to a large degree, were not exposed to the Jaguar games until
<[Bob & Ron] BOB-BRODIE> tonight for the very first time. They thought that the games
<[Bob & Ron] BOB-BRODIE> looked and sounded great, as well as the pricing on the Jaguar
<[Bob & Ron] BOB-BRODIE> for real consumers, rather than the high prices that 3DO is
<[Bob & Ron] BOB-BRODIE> charging for their player.
<[Bob & Ron] BOB-BRODIE> Overall, it was a very exciting night. Many people came to see
<[Bob & Ron] BOB-BRODIE> how serious Atari was about the Jaguar... they came skeptics
<[Bob & Ron] BOB-BRODIE> and left believers!
<[FSU #1!] AEO.MAG> Wonderful!
<[Bob & Ron] BOB-BRODIE> Look for a Jaguar cover on an upcoming issue of Die Hard Game
<[Bob & Ron] BOB-BRODIE> Fan, as well as 8 full color pages of coverage from Die Hard!
<[Bob & Ron] BOB-BRODIE> GA
<[HoST] ST.LOU> I missed John Battey about 5 back so I will let him into line here. Thanks to Scott for waiting a bit longer (and to everyone else still in the queue).
<[J.Battey] J.BATTEY1> Was Ziff-Davis there tonight? (What, no coffee mugs!) ga
<[Bob & Ron] BOB-BRODIE> I'd have to look at the final attendance list to be sure. There
<[Bob & Ron] BOB-BRODIE> is a list of people that did RSVP, but not all of them made it.
<[Bob & Ron] BOB-BRODIE> Not sure about Ziff, sorry.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Scott Corley
<[ScottJ] S.CORLEY1> Bob, why did Atari raise the list price of the Jaguar by $50? Also do you have any idea of the price that Jaguar games will sell for? Thanks. GA.
<[Bob & Ron] BOB-BRODIE> To cover the cost of the included game, which was a bit more
<[Bob & Ron] BOB-BRODIE> than we had expected it to be. The price of the games will be
<[Bob & Ron] BOB-BRODIE> in the 49-89 range, depending on the title, and the developer. ga
<[HoST] ST.LOU> OK....
<[HoST] ST.LOU> On to Andy Smith.
<[Andy] L.SMITH70> Bob... First, Congrats!! Second, I heard the following on the Internet... I heard the Jaguar has a 'startup' sequence consisting of the

Atari Fuji, a digitized roar, and a rotating cube with a jaguar on each side. True? false? More info? :) Also glad to hear you got Virgin! ga
<[Bob & Ron] BOB-BRODIE> Andy, TRUE! When the Jaguar is first turned on, the Red Jaguar
<[Bob & Ron] BOB-BRODIE> logo comes on the screen, there is a digitized roar, and then a
<[Bob & Ron] BOB-BRODIE> group of letters spelling out ATARI drop down from the top of the
<[Bob & Ron] BOB-BRODIE> screen. Then there is a cube with digitized pics of a jaguar
<[Bob & Ron] BOB-BRODIE> that rotates while a quick version of "Have you played Atari
<[Bob & Ron] BOB-BRODIE> today?" is played.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Bob, we have a newsflash from Gene Windell....
<[HoST] ST.LOU> <gene is typing like made>
<[HoST] ST.LOU> Let's go on to Rod Martin....
<[HoST] ST.LOU> Rod... GA
<[Network 23] R.MARTIN22> Bob, is Atari still earmarking $3 million for the NY/SF release, and what is the $$$ for 1994 nationwide release?
<[Network 23] R.MARTIN22> ga
<[Bob & Ron] BOB-BRODIE> Yes. We are earmarking that much for this y ear's release
<[Bob & Ron] BOB-BRODIE> and we are finalizing next year's plans now.
<[Bob & Ron] BOB-BRODIE> Part of the planning is dependent on who our retail partners are.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Gene... GA
<[Gene] E.WINDELL> About 10 minutes ago, CNN Headline News described the Jag's technical features as part of a larger story about new computer graphics technology. Other than the Fuji logo, no pictures were shown. I'm sure they will play it again.
<[HoST] ST.LOU> Thanks Gene. Rob Anisko just picked up USA Today and found the story on page 1D. Thanks Rob.
<[HoST] ST.LOU> ON we go.......
<[HoST] ST.LOU> Mike Lipson
<[Bob & Ron] BOB-BRODIE> Gene, who was the CNN correspondent? Was it Steve Young?
<[Gene] E.WINDELL> don't know.
<[HoST] ST.LOU> GA Mike
<[Bob & Ron] BOB-BRODIE> Thanks! Gene
<[Mike Lipson] M.LIPSON> Hi Bob and Lou! Does the Atari/IBM contract allow IBM to license Jaguar technology for Big Blue's computers and is IBM
<[Mike Lipson] M.LIPSON> interested in having Jaguar expansion boards?
<[Mike Lipson] M.LIPSON> GA
<[Bob & Ron] BOB-BRODIE> No, the contract does not allow IBM to use the Jaguar chipset
<[Bob & Ron] BOB-BRODIE> for any of their products. We are having some discussions with
<[Bob & Ron] BOB-BRODIE> them about other possible uses for the Jaguar chipset.

GA
<[HoST] ST.LOU> Ok... Frank Cuccia.
<F.CUCCI> Bob, did you let the cat out of the bag i.e.the BIG developer that
was to sur
<F.CUCCI> prise all of us and is the TT030 still alive ga
<[Bob & Ron] BOB-BRODIE> Which BIG developer??? Accolade, Virgin, or
Interplay? :-)
<[HoST] ST.LOU> Pick one!
<[Bob & Ron] BOB-BRODIE> And yes! GA
<[HoST] ST.LOU> Tim at AEO is next.
<[Tim@AEO] AEO.8> On an earlier question about the falcons, I happen to know
that
<[Tim@AEO] AEO.8> Tecnation and High End will be selling Falcons as use in
Discos as
<[Tim@AEO] AEO.8> lighting systems, with nifty video effects. anywayss my
question:
<[Tim@AEO] AEO.8> When is the jaguar to be sold in europe? (BTW, that product
is called
<[Tim@AEO] AEO.8> Cyber V)
<[Bob & Ron] BOB-BRODIE> Yes they are Tim, thanks for pointing that out for
everyone. We
<[Bob & Ron] BOB-BRODIE> will be selling some units in the holiday season this
year in
<[Bob & Ron] BOB-BRODIE> Europe. GA
<[HoST] ST.LOU> Thanks. Dave Freeland
<[HoST] ST.LOU> has been waiting a long time
<[David] D.FREELAND> Are there any plans to advertise the Falcon030 at all?
What can you tell us about new Falcon products such as DSP modem, etc... It
seems the Jaguar should allow Atari to push the Falcon more than it has so far.
Go Jaguar!!!
<[David] D.FREELAND> ga
<[HoST] ST.LOU> Thanks Dave
<[Bob & Ron] BOB-BRODIE> Dave.... Plans to advertise the Falcon remain
unchanged. We
<[Bob & Ron] BOB-BRODIE> will advertise cooperativly in the markets where we
have an
<[Bob & Ron] BOB-BRODIE> advantage, such as music with partners like Steinberg,
thank you!
<[Bob & Ron] BOB-BRODIE> GA
<[HoST] ST.LOU> Lucky Seven left, Bob and Ron.
<[HoST] ST.LOU> Harj Nagra....
<[Harj] H.NAGRA1> What games will be available for the Jaguar this
<[Harj] H.NAGRA1> year? (...just saw the Atari Fuji on CNN about
<[Harj] H.NAGRA1> 10 minutes ago!!!)
<[Harj] H.NAGRA1> You should let Video Games magazine know that the
<[Harj] H.NAGRA1> Jag is truly 64-bit and not 32-bit as they state in
<[Harj] H.NAGRA1> their latest issue. GA
<[Bob & Ron] BOB-BRODIE> Bob is near death! :-) Ron typing@
<[HoST] ST.LOU> Hehehehe...
<[Bob & Ron] BOB-BRODIE> Hi Harj... Bob has already written a letter to Video

Games and
<[Bob & Ron] BOB-BRODIE> will mail it when he returns to Sunnyvale. Your
right, they
<[Bob & Ron] BOB-BRODIE> certainly made some mistakes! GA
<[HoST] ST.LOU> Jungle Jim!
<J.THORNHILL> Bob, can you tell us specifically what the Atari vs. Sega suit is
all about concerning the scrolling? ga
<[Bob & Ron] BOB-BRODIE> THe four games available will be:
<[Bob & Ron] BOB-BRODIE> Jim Thornhill, other than the press release, I have no
other
<[Bob & Ron] BOB-BRODIE> information to share with you at this time.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Were you going to list 4 games?
<[Bob & Ron] BOB-BRODIE> CyberMorph, Crescent Galaxy, Raiden and Dynodudes. We
expected
<[Bob & Ron] BOB-BRODIE> Checkerd Flag to be ready but it's late! GA
<[HoST] ST.LOU> OK.... James Vogh.
<[James] J.VOGH> How large are the areas (NY and SF) where the Jaguar will be
released. For example, will
<[James] J.VOGH> stores in Connecticut and possibly Massachusetts also have the
Jaguar?
<[James] J.VOGH> ga
<[Bob & Ron] BOB-BRODIE> James: I believe for the retail chains we are talking
metro NY
<[Bob & Ron] BOB-BRODIE> and the San Fran bay area. Connecticut _MIGHT_ see a
few Jags
<[FSU #1!] AEO.MAG>
<[Bob & Ron] BOB-BRODIE> but I really doubt Mass will except for our current
Atari ,
<[Bob & Ron] BOB-BRODIE> dealers. GA
<[HoST] ST.LOU> Sandy from AEO
<[--Sandy] AEO.9> My 1st RTC. Can you tell us anything about how you interact
with
<[--Sandy] AEO.9> Time Warner
<[HoST] ST.LOU> Then Gregg from AEO
<[--Sandy] AEO.9>
<[--Sandy] AEO.9>
<[Bob & Ron] BOB-BRODIE> Sandy.. Welcome to your FIRST RTC here on GEnie.
<[--Sandy] AEO.9> If not Love you all anyway ga
<[Bob & Ron] BOB-BRODIE> We have an arrangement with Time-Life to have access
to their
<[Bob & Ron] BOB-BRODIE> vast library of film and sound clips to be used with
Jaguar
<[Bob & Ron] BOB-BRODIE> titles. Other than that, they own about 23% of Atari.
GA
<[HoST] ST.LOU> Gregg... from Computer STudio?
<[Gregg] AEO.7> Well, yes as a matter of fact <grin>. I'm impressed, I wish I
could have been
<[Gregg] AEO.7> up there in NY for the show.... However, while we're all
hoping to see the Jag become

<[Gregg] AEO.7> THE dominate factor in the game industry, I'm more Atari computer oriented and
<[Gregg] AEO.7> have to ask if you've any idea how long it will be before we can expect to see
<[Gregg] AEO.7> the Jag's fnatastic graphics and audio made available in a TOS-based Atari computer
<[Gregg] AEO.7> and/or on a VME card for the TT/MegaSTe line? thanks, and keep up the great work.
<[Gregg] AEO.7> GA
<[HoST] ST.LOU> Thanks Gregg.
<[Bob & Ron] BOB-BRODIE> Gregg, Nice to hear from you. At this point in time, it's nearly
<[Bob & Ron] BOB-BRODIE> impossible to project when that might happen. For one thing...
<[Bob & Ron] BOB-BRODIE> some of the developer tools for the Jaguar are still maturing.
<[Bob & Ron] BOB-BRODIE> Also,
<[Bob & Ron] BOB-BRODIE> doing such an enterprise would require the addition of even
<[Bob & Ron] BOB-BRODIE> more staff to assure that it could be done properly. Let us get
<[Bob & Ron] BOB-BRODIE> the Jaguar properly launched, supported, and in the market
<[Bob & Ron] BOB-BRODIE> place and we'll see that we can do on the computer side.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> But we can sure hope for the future. Right, Gregg? :-) Next we have Sir Fransis...
<[HoST] ST.LOU> Sir Fransis?
<[Sir Fransis] K.DRAKE> How many sounds can the Jag generate simultaneously (3DO=8)? Where is the ComLynx port? Any CD titles in development (7th Guest)? Thanks 4 coming! ga
<[Bob & Ron] BOB-BRODIE> The ComLynx port is incorporated in the expansion port at the
<[Bob & Ron] BOB-BRODIE> rear of the machine. ga
<[HoST] ST.LOU> Final question comes from Tony Wetmore.
<WETMORE> A couple real quickies (I hope): Will the "accessory" cables
<WETMORE> and such (S-Video, etc) be available at launch (ie. 2 weeks or so)?
<WETMORE> Also, can we expect/hope for any Atari coin-op translations next
<WETMORE> year? Such as: Hard/Race Drivin', Steel Talons, etc?
<WETMORE> And, again - thanks(!!) for coming online and staying so long!
** <[--Sandy] AEO.9> disconnected.
<[Bob & Ron] BOB-BRODIE> Yes, there will be conversions of coin op games, although not
<[Bob & Ron] BOB-BRODIE> all of them will be Atari Games products. For instance,
<[Bob & Ron] BOB-BRODIE> Virtua Racing is one of the games that we are looking at as a
<[Bob & Ron] BOB-BRODIE> model for what will be done with at least one of the racing games

<[Bob & Ron] BOB-BRODIE> that we're working on. Re the cables, not 100% sure on that,
<[Bob & Ron] BOB-BRODIE> although they should be along quite soon. :) ga
<[HoST] ST.LOU> A record breaking night for Atari and Dateline Atari! Record length, record number of questions, record number of attendees. What can I say. Congratulation to Bob and his guest (and friend) Ron Kovacs for their service above and beyond. GA
<[Bob & Ron] BOB-BRODIE> Lou, THANKS! It has been a really long day for us here in New
<[Bob & Ron] BOB-BRODIE> York. I'm very grateful to our official online service GEnie
<[Bob & Ron] BOB-BRODIE> and to our friends that staff the Atari RT's for allowing us to
<[Bob & Ron] BOB-BRODIE> share this very special evening for a Dateline: Atari Conference.
<[Bob & Ron] BOB-BRODIE> While we normally do this on a Friday night, I will be up in the
<[Bob & Ron] BOB-BRODIE> air, on my way home to California when the conference will
<[Bob & Ron] BOB-BRODIE> normally be running. Thanks to GEnie for allowing us some slack
<[Bob & Ron] BOB-BRODIE> in scheduling this time. :) I'm also grateful that my very
<[Bob & Ron] BOB-BRODIE> good friend Ron Kovacs could be here to share his impressions of
<[Bob & Ron] BOB-BRODIE> the Jaguar launch event, as well as help with the typing tonight.
<[Bob & Ron] BOB-BRODIE> A rare privlidge for me to hand over the keyboard and just
<[Bob & Ron] BOB-BRODIE> give my answers without having to type all night long!! :)
<[Bob & Ron] BOB-BRODIE> Thank you all for coming. We had a very enjoyable evening. And
<[Bob & Ron] BOB-BRODIE> we look forward to our next session of Dateline: Atari with you
<[Bob & Ron] BOB-BRODIE> next month, here on the official Atari online resource: GEnie.
<[Bob & Ron] BOB-BRODIE> I hope that you all enjoy the rest of the evening, and the
<[Bob & Ron] BOB-BRODIE> beginning of the holiday season. Happy Thanksgiving to you all
<[Bob & Ron] BOB-BRODIE> Good night!
<[HoST] ST.LOU> You are most welcome, Bob. The pleasure truly is ours. Folks, look for this transcript in AEO or in library 13 on Saturday morning. Thanks to everyone for coming and have a safe drive home :-) <Bob, get to sleep!!>

Between 15,000 and 20,000 Falcons sold world-wide. Many software companies
support the Falcon, including HiSoft, Compo, Shift, Overscan and GST.

1295. Atari Jaguar Rollout

Newsgroup: comp.sys.atari.st
Date: 1993-11-05 07:40:30 UTC
From: asmith@zero.cypher.com
Message-ID: <1993Nov5.074030.4368@nuchat.sccsi.com>
Source record: 198967

Here is an unofficial transcript of Bob Brodie's "Dateline: Atari" November 4, 1993, the day of the Jaguar rollout! This file has not been edited except to remove unneccessary items and to make it more visually appealing (and readable).

<[HoST] ST.LOU>
This is the night we've been eagerly anticipating ... the official Jaguar roll out from New York City with a live report on the news conference held just two hours ago.
As usual for our Dateline Atari RTC's, our special guest is the Director of Communications, Bob Brodie. Despite a very hectic and exciting day, Bob has chosen to give GEnie users the first accounts of this evening's news conference.
Elsewhere in the Atari ST RoundTable there is growing excitement about the Jaguar, the host of new game developers and the unbelievable climb of Atari stock which hit a high of 12 1/8 today!
Now, without further ado, heeeeeeeere's Bob!

<[Bob & Ron] BOB-BRODIE>
Thanks, Lou. We have a very brief account of the evening that we'd like to upload at this time, then we'll be happy to take any and all questions from the audience. I'd like to express how very excited Ron and I are to be here tonight on Atari's official online service: GEnie!!! The size of the group here tonight is just wonderful, and really helps to show the high level of interest in the Jaguar. With that, here comes our prepared remarks.
Welcome one and all!! We have just returned from the jungle!! Atari has just rolled out the 64-bit home entertainment system to a standing room only audience on the 48th floor of the Time-Life Building in New York City.
I am joined here tonight with my wife Jerri, Ron Kovacs and John Gagne of the Z*Net News Service. We are coming to you live from the Paramount Hotel on 46th St in Manhattan. We invited the cast from Les Miserables, but they were too busy to attend. :) They're just across the street.
What we have witnessed tonight is a new era for Atari Corporation. The introduction and announcement of release of the Jaguar, a 64-Bit home entertainment machine. On hand at the press conference were Jack Tramiel, sons Sam, Leonard and Garry, myself, Bill Rehbock, James Grunke, Augie Ligouri, Terry Valeski, John Skruch, Susan McBride, Purple Hampton, and many other staff members from Sunnyvale.
Major press agencies such as CBS,NBC, ABC, CNN and local reporters from the New York Times, Wall Street Journal,

entertainment and Atari media were in attendance at the event. Heard from nearly ALL of the attendees were WOW and shouts of excitement from the presentation hosted by Sam Tramiel.
Guests were greeted by three male and female jet black leather and vinyl costumed jaguar cats. Tropical foliage, flowering bamboo, moist fog, blue and green tinted pin spots and animal cries, deep from within the heart of the jungle.
Inside the concept changed dramatically, encircling the entire event were Atari Jaguar and Lynx kiosks accented with blue neon rods, ice blue pin spots and more tropical foliage. Positioned in two corners of the room were wire caged with the jaguar costumed dancers.
Sam gave a presentation, accompanied by video displays of the Jaguar TV commercial, and sales videos for the retail stores. There was no expense spared to convey the messages to the attendees that Atari is serious about marketing the Jaguar. No less than 12 screens positioned throughout the room carried the video, as well as Jaguar game play. 10 Jaguar kiosks were stationed throughout the room, each
showing a different video game title. John Skruch and other employees were also prowling the crowd with pre-production EPROM carts in hand, ready to show the visitors the future of Jaguar gaming.
Atari announced the signing of a number of new developers for the Jaguar tonight, including Virgin, Interplay, Microprose, UBI Soft, Gremlins Graphics, Millenium, and Accolade. Accolade will bring Bobsy, Jack Nicklaus Gold, Al Michaels Announces Hard Ball, Brett Hull Hockey, and Charles Barkley Basketball to the Jaguar. Atari Games announced that they will be using the Jaguar as a board for their arcade games. There will be a few other developers that will be announced in a press release a little later on, as well as more details regarding the specific titles that they will be developing for the Jaguar.
Tonight, it was also brought to my attention that there are reports circulating stating that we have stopped our computer business. I'm happy to state that this rumor is 100% FALSE! Atari is not leaving the computer business, we are still producing the Atari Falcon030. Just a few weeks ago, James Grunke was here in New York for the Audio Engineering Society Show, where Cubase Audio for Falcon by Steinberg was released. We feel that the Falcon is just now starting to see applications tha take advantage of it's unique capabilities. With that, we're ready to take any questions about the event tonight, Lou, or anything else that our users might like to ask either Ron or I about. ga

<[Dave] D.SHORR>
Congrats on the Jaguar, Bob! I did have a computer question but as I'm the first person at the mike, I'll change it;): will I be able to use my Atari SC1224 color monitor with the Jaguar? GA.

<[Bob & Ron] BOB-BRODIE>
Hi Dave, yes....you will be able to use youe SC1224 or your
SC1435 with the Jaguar. In fact, we'll be using the SC1224 in th
BOB-BRODIE> in store interactive Kiosks that we're designing. It
will requir you to have the optional RGB cable to use the SC1224
with the Jaguar, though. It's a great picture. :) GA

<[ScottJ] S.CORLEY1>
Bob, could you give us an idea as to when Jaguars will be
released nationwide? Also, is Atari going to put out a promotional
videotape like the one put out by Panasonic for 3d0? It was really
impressive. GA.

<[Bob & Ron] BOB-BRODIE>
The Jaguar will be sold nationally next year. If you live in an
area where the Jaguar is not presently being sold, but wish to
purchase on, you can do so via our customer service department. I'll
pass all of the information on purchasing a Jaguar to Atari Explorer
Online so they can write it up for everyone. We showed the videos
tonight at the launch event, and they were very well received. One
of them is designed to be run as a commercial, "sandwiched" around
another commercial.

<[Graham] G.NORTON>
Bob can we expect the Jags in Canada Jan 1?
Also do you have any cheap Atari stock to sell! :)
<
<[Bob & Ron] BOB-BRODIE>
I'm honestly not sure what timeframe we're looking at for Canada
Graham :) Cheap stock? Not this week!! :) :)

<[NevMan] NEVIN-S>
Thanks. I have two questions. First, is the Jaguar in production,
or were you showing a prototype? Second, on a more personal note,
how did it feel tonight after years of struggling in the computer
market to get the press to pay attention to you, to have them all
there in that room? ga

<[Bob & Ron] BOB-BRODIE>
Yes, the Jaguar is in production...but we did show units from the
pilot production run that was done first. Re you're second question,
it was very nice. Especially nice was to meet so many of the
international press members that I have read about or corresponded
with over the years. I met with Steve Young of CNN today and spoke
with him before and after his filmed interview with Sam. (Boy does
he hate Windows!) Paula Richards of ST Format was also on hand, and
I really enjoyed getting to talk with her. All in all, a really
exciting experience. I know that Ron enjoyed getting to meet the
Tramiels. All of them, including Jack were very happy to meet one
of thier longest, and best known supporters. When Sam was introduced
to Ron, he spent quite a bit of his time letting Ron know how much he
appreciated his many years of service to the Atari Community. I like
him, too. :)

Hope that covered it, Nevin. :)

<[Ed] E.LIN1>
how do the initial Jaguar games compare to the 3DO in terms of graaphics?

<[Bob & Ron] BOB-BRODIE>
Ed, I have only seen Crash 'n Burn. It's a different sort of game than we have done so far. We've provided a number of screen shots that are available for downloading from the ST RT library via Atari Explorer Online Magazine. Rather than Ron and I giving you our opinion, why don't you download the Jaguar pics yourself and take a look at them? I'm sure that you'll be very impressed with them. Especially Crescent Galaxy! :) ga

<[Sean@TWP] P-DIRECT>
Bob -- To change the topic a little, Atari may still be producing the Falcon030, but with perhaps only a few thousand units sold it is obvious something more needs to be done than make them. <grin> Does Atari have plans to sell the Falcon030 through less passive means? For instance, with the help of some enthused writers, the Falcon030 has gained the interest of several special interest magazines, and it seems this would be the perfect way to "sneak" into a market, and at very little expense... GA

<[Bob & Ron] BOB-BRODIE>
Sean, at this point we have no such plans. We're always interested in listening to proposals, though. I'd suggest that you contact Garry Tramiel if you have some suggestions about selling the Falcon030 via a unique means. :)

<[Zombie] R.ANISKO>
Bob, with the Jaguar about to come out, and the Lynx available, is Atari planning on releasing the same games on both systems - it makes nice cross-over sales and advertising... (like Nint*ndo w/ the SNES and Gameboy)? ga

<[Bob & Ron] BOB-BRODIE>
Yes and no, Rob. :)
There is no question that there is some terrific opportunities to do EXACTLY what you've described. However, on the other hand we know that the hand held market is no where as big as the home console market. Plus, the Jaguar makes possible things that canno be done on ANY OTHER GAME MACHINE, including the Lynx. So it's only natural, IMHO, that developers will look to do something new and exciting to stretch the envelope with the Jaguar. We do envision there being some titles that will be made available for the Lynx as well though.

<[Dale] D.ELLIS16>
Congrads Bob, Ron, John, Jerri. Jerri was Bob really there or across the street at Les Miserables? ;-) Real Questions:Have you thought about selling any of the products via TV Shopping? Any TV

shows about the Jag? Like Discovery or FutureWatch? GA

<[Bob & Ron] BOB-BRODIE>
Jerri says he was really there...thanks for checking up on him.
Now, on to the "real" questions, we are open to all of those
opportunities, but first want to get back into the "regular" retail
environment. We feel that it is important that consumers be able
to go into a store and actually see, and try out a Jaguar to fully
appreciate it. So we're very excited to be in stores like Toys 'R
Us, The Wiz, Babbages, Electronic Boutique, Kaybee Toys....and
others.

<[Gary] G.STOLLMAN>
Bob, I am interested in programming for Atari as a developer.
In your honest opinion, is this release the "do-it" thing that will
put Atari back in the forefront of computers,and why is it taking so
long for the Falcon to get software???

<[Bob & Ron] BOB-BRODIE>
Hi Gary. Yes, I think that the Jaguar is going to be a very big
product for Atari. If you hae aspirations about developing for the
Jaguar, I'm sure that Bill Rehbock would like to talk to you. Re
the Falcon...I think there are several reasons that it's taking so
long. #1 - Poor Sales. The economy in California where we do much
of our business, is MISERABLE. And it's true not only for Atari,
but other companies as well. One of the stock analysts that was at
the event tonight told me that Apple is now sitting on a HUGE
inventory of products. He said numbers that frankly, I had a hard
time believing. So, the computer hardware business is just really
tough right now. One of the other reasons it's taking so long is us:
we've reduced our company in size to such a small level that it is
really tough to be able to do everything that we would like to be
able to do. For example, there was some staff at the event tonight
from ST Informer. But I never had a chance to spend more than a few
seconds with them at a time. I hate that, frankly. And think that
once we've added some additional staff we'll be in a better position
to do the things that we need to do to properly support ALL of our
products. GA

<[delroy Blake] D.BLAKE>
I have 3 questions for you.
1) What are the specs on the Jag over sees news travels slow
2) do you inted to market to the Army-AirForce Excange Stores Lots
of people with money to spend and
3) What ever happen to UNIX FOR THE TT,

<[Bob & Ron] BOB-BRODIE>
Good evening Delroy, thank you for attending our RTC tonight!!!
Regarding your questions....WOW! :) I'll give you a quick run down
on the specs, but I'd prefer that you check out the library here on
GEnie in the ST RT for file AEO_SE1.ZIP That file has full set of
press releases including block diagrams of the entire Jaguar system.

The Jaguar is a full 64 bit system that has 5 microprocessors on three chips, including a 64 Bit RISC processor, a 32 Bit RISC processor, and a 68000. The bus is a full 64 bit bus. It is capable of 32 bit color, with over 16.7 million colors, and 16 bit stereo CD sound. BTW, I've just been informed by Travis Guy, Editor of AEO that the correct file name is AEO_SE_J.ZIP :) Thanks, Travis. The file will also have some Jaguar screen shots in it in GIF format. :)
Re the Army/Air Force stuff....not right away, but maybe next year. At first we're doing a New York/San Francisco rollout of the Jaguar this year, then we'll finish our plans for the rest of the US later. Certainly, we want to find a way to provide the Jaguar to the Military.
Lastly, re TT UNIX, we cancelled the BOB-BRODIE> project because we didn't feel that our version of UNIX was cost effective enough to be chosen by a broad base of people. We did feel that Atari UNIX could have been run as a text based UNIX on the Falcon, but we couldn't have close to being able to support it properly, so we cancelled it. GA

<[Chris] C.OATES2>
Two questions: First, when might we see the first Jaguar TV ads? Second, about how many Jaguars have been manufactued to date?

<[Bob & Ron] BOB-BRODIE>
Chris, in the areas that the Jaguar is going to be sold (NY or San Francisco) you'll start to see teaser ads next week. The "real ads" will start shortly after that. Re how many Jags have been built, to be honest, I don't know. I'd need to check with our VP of Manufacturing ....he's not here. It's an incredibly small hotel room. :)

<[Sir Fransis] K.DRAKE>
What do you forsee being the first network use for the Jaguar (Other than ComLynx)

<[Bob & Ron] BOB-BRODIE>
I really don't know. :) I haven't had enough time to think about that yet. For the most part, we've been looking at the system as a game machine for the home to compete against Sega and Nintendo, not so much as a network machine. I do know that Sam is very keenly interested in interactive TV via cable. ga

<[Tony Tramiel] WETMORE>
Bob and everyone: Bravo! You've all done an incredible job! I have 2 questions, but they're related... (actually, I have more)
3) Will I be able to mail-order a Jag from Atari this month?
4) If not, when will retail stores in NY begin receiving Jags?

<[Bob & Ron] BOB-BRODIE>
Yes, and the week before Thanksgiving is when they are due in.

<[Chris] C.CASSADAY>
Bob, can you comment about the possible Dallas distribution point? Will the Jaguar be sold at the Incredible Universe this fall? GA

<[Bob & Ron] BOB-BRODIE>
I've not been told officially that we're going to be there, but I
hear tell that we are, Chris.

<[Sam030] SAM-RAPP>
Hi Bob, Ron, (and others...) What are the possibilities for a modem
for the Jag? Is there an RS-232 on the expansion port?

<[Bob & Ron] BOB-BRODIE>
Yes, there is an RS-232 on the expansion port, and we envision using
the DSP connection to be a modem. ga

<[Dave] D.SHORR>
Has Atari considered offering a cooperative multitasking environment
to its ST customers? Couldn't the multitasking AES and Desktop
contained in the current version of MultiTOS be loaded without MiNT?

<[Bob & Ron] BOB-BRODIE>
Dave, I'm just not techincal enough to discuss that with you. The
best solution that I can see now is to use MultiTOS with Geneva from
Gribnif Software.

<[GOT FALCON!] R.HALL49>
More than 1 question but only requires small answers! :) I just
yesterday got my base unit Falcon(yea!) when can I get an official
hard drive upgrade kit? Will Atari be able to challenge CD-32 in
Europe since they are producing 20,000 units a week now? Tantalize me
with visions of a Lynx II with the Jaguar chipset!!! Final Question...
Jaguar sales truly to be funneled to Falcon!!! (hope,hope,hope) LOVE
my Falcon BTW...thanx GA

<[Bob & Ron] BOB-BRODIE>
Don't know about the HD kit, get a SCSI-II cable and go external
for now. The drives are bigger and cheaper than the tiny IDEs. We
will not challenge CD-32 in Europe...we will defeat them.

<[Kevin Houser] PG.MUSIC>
Bob, any hope for a Falcon based dev system for the Jag &/or Lynx?
Also, could I get a 'factory' direct Jag when I go to Charlotte this
weekend. <g> I'm interested in doing music related Jag titles. Doezit
have a Midi port? <g> Kevin in Atlanta, PG Music Atari development...
BTW, all PG Music stuff (new) is written on a Falcon030/14/120 <g> Good
European sales too.

<[Bob & Ron] BOB-BRODIE>
Hi Kevin. Yes, there is a TOS based dev system for the Jaguar now.
I think it is quite logical to assume that it will be ported to the
Falcon. Sorry, IBM is not selling the Jaguar Factory Direct at all.
They build it, warehouse it, and ship it. That's all. No MIDI port,
but wow! It can make terrific music!!

<[NewSTar Tech] C.S.SMETON>
Bob, where (what stores) and when can I tell my buddy in NYC
to buy a Jaguar for me? ga

<[Bob & Ron] BOB-BRODIE>
The Wiz, Babbages, Toys 'R Us, Electronic Boutique, Kaybee Toys,
that enough Charles? GA

<[FSU #1!] AEO.MAG>
Evening sirs! It sounds like everyone had a great time tonight.
Bob, I think I can speak for every Atarians in saying it's good to
finally have Atari back on track to the forefront - where we feel
Atari belongs. Can you give us some specific reactions from some
of the crowd at the event? Paul Harvey mentioned Atari and the
Jaguar today in his radio show, and it was very positive. Go Atari!

<[Bob & Ron] BOB-BRODIE>
Evening, Travis! It's great to see you online tonight!! Ron
sez Hi!! We at Atari are very grateful for the fine job that you
and rest of the very fine staff at Atari Explorer Online do to
support the entire Atari Community. If only all publications would
follow your excellent example of how to do an online mag! (Well, I
can dream, can't I?!?!?!) Today, USA Today ran a very nice article
about Video Games, and featured a full color picture of the Jaguar
on the LIFE Section of the paper. The San Jose Mercury News also
ran a terrific article on the Jaguar. Many of the people that were
at the event tonight were financial writers, or business writers.
They to a large degree, were not exposed to the Jaguar games until
tonight for the very first time. They thought that the games
looked and sounded great, as well as the pricing on the Jaguar
for real consumers, rather than the high prices that 3DO is charging
for their player. Overall, it was a very exciting night. Many
people came to see how serious Atari was about the Jaguar... they
came skeptics and left believers! Look for a Jaguar cover on an
upcoming issue of Die Hard Game Fan, as well as 8 full color pages
of coverage from Die Hard!

<[J.Battey] J.BATTEY1>
Was Ziff-Davis there tonight? (What, no coffee mugs!) ga

<[Bob & Ron] BOB-BRODIE>
I'd have to look at the final attendance list to be sure. There
is a list of people that did RSVP, but not all of them made it. Not
sure about Ziff, sorry.

<[ScottJ] S.CORLEY1>
Bob, why did Atari raise the list price of the Jaguar by $50? Also
do you have any idea of the price that Jaguar games will sell for?
Thanks. GA.

<[Bob & Ron] BOB-BRODIE>
To cover the cost of the included game, which was a bit more than
we had expected it to be. The price of the games will be in the
49-89 range, depending on the title, and the developer. ga

<[Andy] L.SMITH70>
Bob... First, Congrats!! Second, I heard the following on the

Internet... I heard the Jaguar has a 'startup' sequence consisting of the Atari Fuji, a digitized roar, and a rotating cube with a jaguar on each side. True? false? More info? :) Also glad to hear you got Virgin! ga

<[Bob & Ron] BOB-BRODIE>
Andy, TRUE! When the Jaguar is first turned on, the Red Jaguar logo comes on the screen, there is a digitized roar, and then a group of letters spelling out ATARI drop down from the top of the screen. Then there is a cube with digitized pics of a jaguar that rotates while a quick version of "Have you played Atari today?" is played.

<[Network 23] R.MARTIN22>
Bob, is Atari still earmarking $3 million for the NY/SF release, and what is the $$$ for 1994 nationwide release? ga

<[Bob & Ron] BOB-BRODIE>
Yes. We are earmarking that much for this y ear's release and we are finalizing next year's plans now. Part of the planning is dependent on who our retail partners are.

<[Gene] E.WINDELL>
About 10 minutes ago, CNN Headline News described the Jag's technical features as part of a larger story about new computer graphics technology. Other than the Fuji logo, no pictures were shown. I'm sure they will play it again.

<[Mike Lipson] M.LIPSON>
Hi Bob and Lou! Does the Atari/IBM contract allow IBM to license Jaguar technology for Big Blue's computers and is IBM interested in having Jaguar expansion boards?

<[Bob & Ron] BOB-BRODIE>
No, the contract does not allow IBM to use the Jaguar chipset for any of their products. We are having some discussions with them about other possible uses for the Jaguar chipset.

<F.CUCCI>
Bob, did you let the cat out of the bag i.e.the BIG developer that was to surprise all of us and is the TT030 still alive ga

<[Bob & Ron] BOB-BRODIE>
Which BIG developer??? Accolade, Virgin, or Interplay? :-)

<[Tim@AEO] AEO.8>
On an earlier question about the falcons, I happen to know that Tecnation and High End will be selling Falcons as use in Discos as lighting systems, with nifty video effects. anywayss my question: When is the jaguar to be sold in europe? (BTW, that product is called Cyber V)

<[Bob & Ron] BOB-BRODIE>
Yes they are Tim, thanks for pointing that out for everyone. We will be selling some units in the holiday season this year in Europe.

<[David] D.FREELAND>
Are there any plans to advertise the Falcon030 at all? What can you tell us about new Falcon products such as DSP modem, etc... It seems the Jaguar should allow Atari to push the Falcon more than it has so far. Go Jaguar!!!

<[Bob & Ron] BOB-BRODIE>
Dave.... Plans to advertise the Falcon remain unchanged. We will advertise cooperativly in the markets where we have an advantage, such as music with partners like Steinberg, thank you!

<[Harj] H.NAGRA1>
What games will be available for the Jaguar this year? (...just saw the Atari Fuji on CNN about 10 minutes ago!!!) You should let Video Games magazine know that the Jag is truly 64-bit and not 32-bit as they state in their latest issue.

<[Bob & Ron] BOB-BRODIE>
Bob is near death! :-) Ron typing@ Hi Harj... Bob has already written a letter to Video Games and will mail it when he returns to Sunnyvale. Your right, they certainly made some mistakes! GA
THe four games available will be:
CyberMorph,
Crescent Galaxy,
Raiden and
Dynodudes.
We expected Checkerd Flag to be ready but it's late! GA

<J.THORNHILL>
Bob, can you tell us specifically what the Atari vs. Sega suit is all about concerning the scrolling? ga

<[Bob & Ron] BOB-BRODIE>
Jim Thornhill, other than the press release, I have no other information to share with you at this time.

<[James] J.VOGH>
How large are the areas (NY and SF) where the Jaguar will be released. For example, will stores in Connecticut and possibly Massachusetts also have the Jaguar?

<[Bob & Ron] BOB-BRODIE>
James: I believe for the retail chains we are talking metro NY and the San Fran bay area. Connecticut _MIGHT_ see a few Jags but I really doubt Mass will except for our current Atari dealers. GA

<[--Sandy] AEO.9>
My 1st RTC. Can you tell us anything about how you interact with

Time Warner

<[Bob & Ron] BOB-BRODIE>
Sandy.. Welcome to your FIRST RTC here on GEnie. We have an arrangement with Time-Life to have access to their vast library of film and sound clips to be used with Jaguar titles. Other than that, they own about 23% of Atari. GA

<[Gregg] AEO.7>
I'm impressed, I wish I could have been up there in NY for the show.... However, while we're all hoping to see the Jag become THE dominate factor in the game industry, I'm more Atari computer oriented and have to ask if you've any idea how long it will be before we can expect to see the Jag's fnatastic graphics and audio made available in a TOS-based Atari computer and/or on a VME card for the TT/MegaSTe line? thanks, and keep up the great work.

<[Bob & Ron] BOB-BRODIE>
Gregg, Nice to hear from you. At this point in time, it's nearly impossible to project when that might happen. For one thing some of the developer tools for the Jaguar are still maturing. Also, doing such an enterprise would require the addition of even more staff to assure that it could be done properly. Let us get the Jaguar properly launched, supported, and in the market place and we'll see that we can do on the computer side.

<[Sir Fransis] K.DRAKE>
How many sounds can the Jag generate simultaneously (3DO=8)? Where is the ComLynx port? Any CD titles in development (7th Guest)? Thanks 4 coming! ga

<[Bob & Ron] BOB-BRODIE>
The ComLynx port is incorporated in the expansion port at the rear of the machine. ga

<WETMORE>
A couple real quickies (I hope): Will the "accessory" cables and such (S-Video, etc) be available at launch (ie. 2 weeks or so)? Also, can we expect/hope for any Atari coin-op translations next year? Such as: Hard/Race Drivin', Steel Talons, etc?
And, again - thanks(!!) for coming online and staying so long!

<[Bob & Ron] BOB-BRODIE>
Yes, there will be conversions of coin op games, although not all of them will be Atari Games products. For instance, Virtua Racing is one of the games that we are looking at as a model for what will be done with at least one of the racing games that we're working on. Re the cables, not 100% sure on that, although they should be along quite soon. :) ga

<[HoST] ST.LOU>
A record breaking night for Atari and Dateline Atari! Record length, record number of questions, record number of attendees.

What can I say. Congratulation to Bob and his guest (and friend) Ron Kovacs for their service above and beyond. GA

<[Bob & Ron] BOB-BRODIE>
Lou, THANKS! It has been a really long day for us here in New York. I'm very grateful to our official online service GEnie and to our friends that staff the Atari RT's for allowing us to share this very special evening for a Dateline: Atari Conference. While we normally do this on a Friday night, I will be up in the air, on my way home to California when the conference will normally be running. Thanks to GEnie for allowing us some slack in scheduling this time. :) I'm also grateful that my very good friend Ron Kovacs could be here to share his impressions of the Jaguar launch event, as well as help with the typing tonight. A rare privlidge for me to hand over the keyboard and just give my answers without having to type all night long!! :) Thank you all for coming. We had a very enjoyable evening. And we look forward to our next session of Dateline: Atari with you next month, here on the official Atari online resource: GEnie. I hope that you all enjoy the rest of the evening, and the beginning of the holiday season. Happy Thanksgiving to you all. Good night!

<[HoST] ST.LOU>
You are most welcome, Bob. The pleasure truly is ours. Folks, look for this transcript in AEO or in library 13 on Saturday morning. Thanks to everyone for coming and have a safe drive home :-) <Bob, get to sleep!!>

Hey, knock it off - my VIC20 still works, outlasting my first ST by 10
years! And I never had a program which didn't work (even ATARI's demo
didn't work on my ST).

Seriously though, will the prices of accesories (SCSI interface, graphics
cards etc.) come down in price or just disappear like they did with my VIC?

But, unfortunately, the long and short of it is that Magix is not available
outside germany, even in the rest of Europe (I live in the UK).

MiNT/MultiTOS is available here, now (I have it & occasionally actually use it).

Perhaps I would use Magix if I could get it. I'll probably just wait & get
Neodesk 4 + Geneva instead.......that is sure to receive a UK release.

Hi all,

anybody out there who evaluated existing spread-sheets for Atari-ST?
I m looking for a simple and inexpensive program. Graphics is not so
important, but macro-capabilities are very appreciated.

Any recommendations ether commercial programs or public domain will be
appreciated.

Since I m asking this for a friend who has no access to the net and I do
not usually read this group, please answer directly to my e-mail-adress.

aaammm... it s for a ST with 1 meg.

Thanks in advance for your help,

-ivo

A lot happened to Mag!X in the last two months. Wait for the results.
About the Falcon: I don't understand why some people don't realize that
Mag!X is a system on its own i.e. especially the XBIOS has to be completed
to support the DSP etc. This can't be done in a single day, don't you agree.
And of course there will have to be a beta test phase for a coming Falcon
version. You can't simply hack some Falcon support and then distribute this.
I got the impression the programmers of Mag!X take their work seriously and
this means that there will be a new release when everything is working as
perfectly as this is the case on ST and TT now.

> I have been using Le Redacteur for more than 18 months now and it has never
> -- that is never -- produced bombs or given me any trouble whatsoever. The
> only thing I miss is the ability to run in TT-medium rez.

I half expected a reply like this, because I've never seen anyone complain
about Redacteur. I use the medium resolution version, which I suspect has
not been tested as well as the high res version most people proably use.
Which version do you run? I sent a list of 14 bugs to the ST club which
I found in 4 days! Try these:

In the file selector with a number (say 25) .IMG files in the list, move
the top one to the archive button to look at it, right click to remove it
from the screen, then hold the left mouse button down on the down arrow.
My system scrolls a few lines, then gives Internal Error.
Does the Control \ give you the page number dialog? Mine doesn't.
Does the right shift work as a key extender in the file selector? I _must_
use the left shift key.
Click the recognition box from the ruler menu and hold the right mouse button
down over the font letters. I get Internal error if I do that.
I've never once got it print out an .IMG in a document. It normally prints
half the image then considers its work done. EPSON 24 pin BTW.
Have you ever lost a footer? Three or four times I went to edit a footer
I had typed in earlier only to find it not there. It still prints, but the
editor has lost it.

I have plenty more where they came from, and I never even ran the font editor
or the database utility or the mailmerge. Like I say, I found it useable.

> send and receive commands? Is version 1.49 (cc) the latest?
> V1.8 of Gemfast? (dated 5/92)
I use HSC all the time and it seems very sound to me. It's not ANSI compatiable (AFAIK) but it does all the things you'd expect it to. The GEM support parts of the package are superior to any I've seen commercially available.

> 3)What about RSC editors? Can I use the one that came with
> my copy of Mark Williams C? (I did't want to use MWC 3.0
> 'cause its been unsupported for a pretty long time and I
> never have used it so I don't know if it's any good, any
> opinions?
I use WERCS which is OK, although a lot of people don't like it. I have been told ORCS (Otto's RSC I believe) is excellent, and PD.

> 4)How does one best learn to program GEM? I have 1 through
> 13 of the ProGem series, is there more? I need some more
> basic material to start me off.
You have to jump in! It's the sort of subject which you must understand completely to make any sense of any of it. Reading the ProGem series makes it look difficult, but when you actually get down to it, it's not so hard. Everything you need is in those examples.

> P.S. The reason I think HSC may be buggy is that the examples
> are buggy, Minicolr.prg hangs my system (mega ST 1.2). and
> Browse, another example, bombs with Windowed ACCs. Also
> MasterBrowse 3.2 is the only program I've seen written with HSC
> and it is none to stable, either.
All works fine on my set up (TOS 1.2)!

G'Day.

: Can someone tell me which terminal program (PD) supports a baud rate of
: 57600? I use Uniterm which does not.

STalker says that it goes up to 153,600bps on the Mega STe/TT fast serial port. I haven't been able to test this since I've never found anything else fast enough to try it out on!

You should take a VERY close look at DA's Vektor from Digital Arts! Advantages:
Runs on ANY Atari (inc. falcon/MultiTOS)
Uses FPU if present
Runs in ANY gfx mode
Allways use 24bit gfx internally
"Vector-morphing"
3D-Extrusion
GraphicCharts
Animations (Vector and bitmap)
and MUCH MORE!!!

A GREAT package altogether, the only disadvantage being it requires quite a lot
of RAM and can feel a bit slow without FPU...

DA's Vektor will do the job perfectly, can put text along any path and in any shape!!!

: Courier...

Actually, with a bit of effort, you could use your printer's built-in
fonts, since WWST allows you to embed printer codes in the document.
Changing fonts is easy enough, but getting nicely justified text might be
trickier...

>I would like to write a little joystick-game for my son, but I don't know
>how to get the status of the joystick.
>I use TURBO-C on a ST.

Well, I got several hints. Thank you.
I post the resulting code in group <comp.sources.atari.st> for public use.

BTW: The game is quite simple. There are two cats on the screen. The
movement of the first is controlled by the computer and the movement of the
other by the joystick. The cats can play together. Sometimes a dog appears
for a while and the cats should avoid him (That's the reason for using the
joystick instead of the mouse: My son frightens at this event and throws the
mouse away). That's all of the game, but it's enought for that 3-jears old
boy who is playing.

Not with MiNT; MiNT is a collaborative effort under constant development.
If someone comes up with a necessary feature, they can implement it
themselves (souce is available), or they can ask the happy hackers
working on MiNT to add it.

> solution--there's GOT to be a simpler method!)

If it's a text file, use 'sed' (available on fine ftp sites everywhere...):

```
sed -e "s/text to search for/text to replace with/g" filename > filename.new
```

Of course, "text to search for" can be a regular expression, so if you need
to search for . or [or] or a few other special characters, you'll need
to "escape" them with \ first...

>has anybody ported the swi-prolog and does it work with the falcon?
>or is there another prolog available on ftp.
>
>thanks in advance
>p.

As far as I know, there are three versions of prolog available from ftp.
xprolog
sb prolog
another one..the name escapes me...the one I use most as well

The first two are based on C prolog, while the last one is based on the Warren Abstract Machine.

There is also another prolog available, but I don't know where to get it from. All the above are available from atari.archive (does no one call it Terminator anymore?) in the Languages directory.

The other prolog -- Toy Prolog, which I don't know where to get, has documents avilable for it in the same directory as above.

Hope this helps.

>

First off, you can get to Gribnif three different ways over the Internet.
You can send mail to me at stewart@titan.ucs.umass.edu, or to Dan on GEnie
at GRIBNIF@genie.geis.com, or to Rick on Compuserve at
75300.1131@compuserve.com.

On to the STalker questions:

Let me start by saying that I don't know exactly what a UNIX tset does, but
I have two likely scenarios for the problem. The first is that it causes
the whole screen, including the scrollback to clear. The second is that
it causes STalker to use only the first 24 lines of the scrollback.

The first problem is actually very common, and is the way STalker is intended
to work. The scrollback on STalker is not really a history, but a virtual
screen. Most of the time, you can basically use it as a history, but if the
host system issues a clear screen command, that's what STalker does. The
BackTALK command set_int_param can be used to change this behavior. So that
instead of clearing the screen, STalker will just move down a line. However,

this only works in VT-52 and PC-ANSI emulation modes.

The second possibility, where STalker ends up using only the first 24 lines of the scrollback is something I've personally seen the most using emacs. If this happens to you, just tell STalker to reset the communication port, and the problem will clear up. This is most likely a bug in STalker, and should be fixed when we can get the time to do a newer version. We also want to change the way clear screen works in the next version to be more consistent with the way most of our users seem to want it to work.

Character loss in STalker is usually due to buffer overflow, and can be avoided by using the AUXINIT program which comes on the STalker disk.

The reason STalker is slower than Uniterm is because it is a GEM application using GEM text, instead of TOS text like Uniterm and Flash do. The advantages to this are several. Firstly, it works on your Moniterm. It also allows STalker to work as a DA on a regular ST, and therefore allow background downloads. Finally, it allows it to work on multitasking systems like our new Geneva, and MultiTOS.

The fact that it is a GEM app is also the reason why you can only get 23 lines on a color screen, since it has to leave one line for the menu bar. GDOS and a different font is a nice solution to this, if you don't mind the additional bit of a slow down. I usually get by fine with 23 lines. :)

Look in wuarchive for the kermit desk accessory, I can't remember the name
of it, but I got it there, it worked great with FLASH. e-mail if you can't
find it, and maybe I can dig it up for you.

BTW, you must have a terminal program running that allows you to access your
desk accessories. I also have a copy of C-kermit for the ST. (it should
be available on wuarchive also).

Just thought you all might want to know, ID software (makers of the
famous MSDOS Wolfenstein 3D and soon to announced DOOM) are in the
process of negotiating with Atari for a port of the new game DOOM.

For those not familiar with Wolfenstein or DOOM they are games
with full 3D perspective that have amazing graphics. All the
walls, items, etc. are fully textured. Just take a peek at
comp.sys.msdos.games and you will see that probably 1/4 of
all posts apply to one of these games. BTW, the makers of
DOOM deal only in shareware, yet still netted over a million
last year (to give you some idea of their game's popularity)

Support from ID would give Atari a strong hold on the Video
game market.

Scriba Communis Responsi Volume 2 Issue 2 is just about to be released (coming soon to an ftp site near you. ;-)) And we would like to announce a 3 word story/poetry game. We would like you creative people out there to participate and send submissions to this email address (ga@mrih.no). As we don't have _any_ economy at all, the only price we can give is that you will get your story/poem "printed" in Scriba Communis Responsi.

The three words are: magic, darkness, triumph

Scriba Communis Responsi is a non-profit diskmagazine for the Atari ST/STe/TT/Falcon line of computers with a different view and different contents. This diskmagazine contains mostly non-computer related stuff.

Available at atari.archive.umich.edu in the folder Magazines/Diskmags/Scriba
Coming soon next week: Scriba Volume 2 Issue 2, featuring soundtracker music on STe/TT/Falcon, improved textviewer which now includes graphics, improved medium resolution picture, menu/submenu/subsubmenu-system...

Hello,

I have an ST with 2.5 megs of ram, no hard-drive, and only a ss/sd floppy.
I would like to know if it is possible for me to try CONNECT.

The .lzh file is 420 megs. How much of this file is absolutely necessary?
Is there a smaller part that I could send to my ramdisk so that I can
try this program out? Is it possible to have my floppy and my ramdisk
share the effort?

To all who both know and respond in kind, thanks in advance.

Jeff Healey

1333. Upgrading a 1040STf?

Newsgroup: comp.sys.atari.st
Date: 1993-11-05 18:49:12 UTC
From: x91mikowski@gw.wmich.edu
Message-ID: <1993Nov5.134912.12368@gw.wmich.edu>

Hi,
Currently I have TOS 1.04 and would like to upgrade my 1040STf memory-wise
and OS-wise. What's the best way to do this and cost of doing this?

Thanx,
Bernard

1334. Obtaining Motorola manuals

Newsgroup: comp.sys.atari.st
Date: 1993-11-05 19:01:28 UTC
From: gt1448b@prism.gatech.EDU
Message-ID: <121695@hydra.gatech.EDU>
Source record: 198910

I inquired today about obtaining users manuals from Motorola. If you
are a student, you may obtain them through Motorola's University
Support by following this procedure.

Make a copy of your student ID
Write down the manual you wish to obtain and your address
Fax this to 602-952-3621

I don't know if this is in the FAQ, perhaps it should be added.

Does MagiX work on the TT?
Which company is distributing it in Germany?
What is this distributors e-mail adress?

This is being entered from Alan Page's Storm version 1.00, just downloaded from GEnie. It is a very good comm program, in the finest tradition of FLASH 1.6. The tiny font is a little bit to get used to, and it will have to have a few upgrades to really make it top-drawer...

But, a very good terminal and many, many treats, including seamless background transfers and all that. Everything happens without much effort. Congratulations Alan Page!

Yes, the Quadra 605 _is_ a low end machine to me. As our 'buddy' Peter Sinclair
is so fond of pointing out, it's the first 040 machine to sell for under $1K.
And I _still_ don't see why you think this was a dumb move by Apple. I think
they will sell a bunch of 'em and that can't be too dumb, can it?

> > ... the vast majority of most applications do not take advantage of an fpu,

You can remain unsure if you wish but trust me, it's true. I won't argue the
point any further. Just go ask a few others for confirmation. The presence of an
fpu will NOT speed on integer math. Again, it's great to have, sure, but some
(many) average computer users don't really need it in the first place.

Well by _my_ account, GFA for Windows is a very powerful language and the ONLY
BASIC for PC's that you can create DLL's with! GFA for DOS is OK, but not as
good as GFAW. Both GFA products suffer from poor documentation. Visual Basic
has a very nice (spiffy!) GUI design tool but the language itself is weak.

These comments are IMHO but I do own all 3 so it's based on some experience.

1348. Storm

Newsgroup: comp.sys.atari.st
Date: 1993-11-06 00:26:12 UTC
From: bh@okcforum.osrhe.edu
Message-ID: <CG1nvp.1sw@darkside.osrhe.edu>
Source record: 198916

Storm is a shareware telecommunications program from the original author of Flash for the Atari ST.

Storm Features:

GEM-based terminal in a window. Custom font and text routines for high-speed operation. Compatible with large screen monitors and hi-rez video cards.

Multiple editing windows and capture buffer window are resizable, and moveable. Full continuous word wrap. With MultiTOS, the number of windows is limited only by available memory.

MultiTOS compatible. Uses memory sparingly and releases unused memory back to the system.

The script language is interpreted Basic, with powerful command extensions for telecommunication. Online help for Basic keywords. Full screen editor for Basic programs.

Background dialing of multiple phone numbers.

No fixed limit on dial directory entries. Saves individual terminal and serial port settings for each entry.

Background file transfer without requiring a reset-proof ramdisk.

Terminal emulations are loadable and unloadable. Current terminal emulations include TTY (built-in), VT100, and Vidtex.

File transfer modules are loadable and unloadable. Current file transfer capabilities include Ascii (built-in), BPlus, Xmodem, Ymodem, and Zmodem.

Windows-style menu dropdowns and hotkeys.

Support for extra serial ports on TT and MegaSTE as well as Falcon serial port.

I have uploaded STORM100.LZH to Atari Archive, it should be released in a day or so.

NeoDesk 4 and Geneva will both be distributed by Compo Software Ltd in the UK.
Their first 50 Genevas are sitting in our office ready to be picked up by the
shipping company now. I'm not sure how long it'll take them to actually get
to market, but it shouldn't be too long now.

NeoDesk 4 is going to take a bit longer. We talked about it in the office
for a while today, and it looks like February or after is a much better
estimation of when NeoDesk 4 will be ready in the US, and the UK version should
follow shortly. We had hoped to get NeoDesk out in December, but decided we
would end up cutting too many corners to make it happen.

So far the ONLY DSP compiler I've been able to get has been the one Atari offers to developers for about $80. I do not know of any C compilers offering DSP high level subroutines. If you do go the assembler route, I recommend getting the 56000 programming guide from Oregon research.

The reality is that Atari will never have a strong hold on the video game market. Atari needs to produce at least a million Jaguars this year, not next year. As usual Atari has screwed the Jaguar as well as the Lynx, Falcon and the TT. History repeats itself and Atari is no exception. I will say this again: "I have seen the future, it's 3DO!!"

1353. CFV: rec.autos.simulators

Newsgroup: comp.sys.atari.st
Date: 1993-11-06 01:17:08 UTC
From: rdippold@qualcomm.com
Message-ID: <rec.autos.simulators-CFV1@uunet.uu.net>
Source record: 198921
Cross-posted to: news.announce.newgroups,news.groups,rec.autos,rec.autos.driving,rec.autos.sport,comp.sys.amiga.games,comp.sys.atari.st,comp.sys.ibm.pc.games.misc,comp.sys.mac.misc,comp.sys.mac.games

FIRST CALL FOR VOTES (of 2)
unmoderated group rec.autos.simulators

Newsgroups line:
rec.autos.simulators Discussion of automotive simulators.

Votes must be recieved by 23:59:59 UTC, 27 November 1993.

After the CFV appears in news.announce.newgroups it will be posted by the proponent to the World Circuit, Formula 1 Grand Prix mailing list <wcf1gp@divsun.unige.ch>.

This vote is being conducted by a neutral third party. For voting questions only contact rdippold@qualcomm.com. For questions about the proposed group contact Afzal Ballim <afzal@divsun.unige.ch>.

CHARTER

This newsgroup will be used for discussions of realistic computer simulations of automotive vehicles, irrespective of the platforms on which said simulations are supported. This will include simulations which have a competitive component (racing simulations) and those which do not. Topics will include (but are not restricted to):

o Global characteristics of particular simulations.

o Platform-dependent characteristics of such simulations (as a convention, it is suggested that such discussions list the platforms in the subject header, e.g.,

Subject: [ibm-pc,sun] Blog's Yugo simulator

o Design and implementation issues of such simulations.

o Issues of realism in automotive simulation.

o General discussion of automobile simulations.

Obviously, determining whether a particular simulator is "realistic" requires a judgement call. It is hoped that broad accord between posters will enable the discernment of valid simulators (for discussion in this group) from those which are devised for an entertainment value without concern for realism. Thus, discussion of many of the arcade racing simulators, which provide an overview perspective of the vehicle being simulated and which do not attempt to provide realism of handling of the vehicle, would not be appropriate

in this newsgroup. On the other hand, simulators such as Microprose's Formula 1 Grand Prix would fall within the purview of this group as attempts are made to capture realistic handling of the vehicle.

FAQ Outline

A preliminary FAQ is in preparation for the eventuality that the group passes the vote. The current outline is included here:

FREQUENTLY ASKED QUESTIONS for rec.autos.simulators
Written by Afzal Ballim

Version: 0.0
Last Update: 26/10/1993
If you think of questions that are appropriate for this FAQ, or would like to improve an answer, please send email to afzal@divsun.unige.ch

Topics Covered:
==========

Part 1:
[1-0] What is the purpose of this newsgroup?
[1-1] What conventions are suggested for subject headings?
[1-2] How do I decide if a simulator is "realistic"?
[1-3] Does discussion on arcade racing games belong here?

Part 2:
[2-0] What realistic racing simulators exist?
[2-1] What platforms support them?
[2-2] What add-ons, editors, updates, etc., exist for these simulators?
[2-3] Where can I find them?

Part 3:
[3-0] What realistic NON-competitive simulators exists?
[3-1] Where do I start if I want to build a simulator?
[3-2] How do I model <X> in an automotive simulator?

STANDARD VOTING INFO

You should send MAIL (posts to a group are invalid) to voting@qualcomm.com
(just replying by MAIL to this message should work). Your mail message should contain one and only one of the following statements:

I vote YES on rec.autos.simulators
I vote NO on rec.autos.simulators

Anything else may be rejected by the automatic vote counting program. You may ABSTAIN in place of YES or NO - abstain votes do not affect the vote outcome. You may change your vote later by voting again. The votetaker will respond to received ballots with mail acks. Addresses and votes of all voters will be published in the vote results. If you wish to remove your vote and all indication that you have voted from the

final list, send a vote with CANCEL in the place of YES/NO/ABSTAIN.

Standard Guidelines for voting apply. One vote per person, no more than one vote per account. 100 more YES votes than NO votes and twice as many YES votes as NO votes are the requirements for group creation.

VERY interested in the GFA3.0 (and compiler) and maybe the GFA3 book, as Im looking to upgrade from 2.0... what sort of price were you thinking of ??? (I'll offer ya $25 + whatever the shipping cost or....)

Thanx, TTYL - Andy

1357. Nt Comp

Newsgroup: comp.sys.atari.st
Date: 1993-11-06 05:28:09 UTC
From: hsp4@namaste.cc.columbia.edu
Message-ID: <2bfcl9$1k6@apakabar.cc.columbia.edu>
Source record: 198936

I have a program called NT Comp that supposedly compresses .MOD files into .SEG files which run 100% on the DMA sound chip, requiring no CPU time. Unfortunately, whenever I try to use it on my MSTE 4, it never completes compiling a MOD, regardless of how small it is (I've tried mods like 4_MAT which are under 10K), since it runs out of memory. I'm wondering if I have something set wrong. I'd just love to be able to run the MODs without any CPU overhead, since things get hairy when I'm trying to run PageStream (or even STalker) when playing a MOD at 25 or even 50 KHz...

Thanks for your advice...

Aw, don't be so pessimistic. Let just say until the Jaguar takes off, and
a few more Falcon030 machines are sold, talk of an '040 machine is premature.
However, there have been some interesting developments in Germany lately; as
I understand, a company is making TT clones, and may even have a TT'040 clone
in the works. Anyone from Deutschland care to add to that?

Hello from Singapore,

I need to buy (mail order) two pieces of ICD LINK, DMA->SCSI adapters.

I used to buy Atari hard/softwares from the BRE Softwares or D&P computer Inc.few years ago but now I am not sure if these 2 company still selling Atari hardwares.

I would like to know which company is more reliable and will give the best (lowest) price.

Information on the companys' name, their FAX number and current selling price of the ICD LINK would be most appreciated.

Suthipuntha, School of Architecture, National University of Singapore.

The TT Clone from Germany called the Eagle will be a 68030/50 and the Medusa is
the 68040/32 (64 doubled).....

The Medusa is already finished and can be bought from Medusa in Switzerland,
and the Eagle will be finished end of November so I heard...

1361. Atari's future (plus Nintendo)

>
> Was Nintendo around when Atari produced Pong? I think not.

M> Actually, Nintendo has been around for about 200 years or so -- they
started out producing a Japanese card-game (Called something like "HI") which
was very popular. Nintendo has bee around for a _very_ long time and has been
through as much or more sh*t than Atari -- really, Atari and Nintendo are kind
of birds of a feather when you take this perspective.

> Univ. of Northern Iowa

Hmm...possible. Phillips' CD-I has a very significant jump on the 3DO's potential market. If 3DO ends up not being competetive with Phillips in their market (and Phillips does own that market right now) then 3DO is only going to be part of a very few rich people's short-term future.

We'll see, eh? :)

The Atari Jaguar, at ~1/3 the cost of the 3DO, is really not going to do much competing directly. It really seems like a nice machine with software equally nice -- based on what you, me and everyone else has seen/heard, what makes you think the Jaguar will flop?

To tell you the truth your idea seems contrary to every source i've seen -- seems that the Jaguar is already quite popular in the minds of many people. I think we've all seen and know that the potential is in the machine to have truely fantastic games. I'd say that Atari's pricing is very comparative to all their present competition.

In this light, why _do_ you think the Jaguar will bomb? I can't think of anything that really tarnishes its record thus far...certainly not to the extent of "bombing."

Have a day.

>share the effort?

You don't need all the files, some are German/English duplicates and other files are sample scripts and the likes. It has built in xyzmodem, so a RAM disk would be useful as a temporary place for up/downloads. You could also use PFXPAK which reduces the size of CONNECT.PRG to 220k, so that it would fit on your disk along with the RSC. There is also a 100k help file which you could have in the RAM disk.

1366. Bob Brodie realtime conference (long message)

Newsgroup: comp.sys.atari.st
Date: 1993-11-06 15:11:48 UTC
From: hoosier@rider.cactus.org
Message-ID: <3796@rider.UUCP>
Source record: 198947

For those folks interested in the Bob Brodie/Atari realtime conference on GEnie last night, the following is my capture of the RTC. It's not a very edited capture, so forgive the messiness...

Anyways, credit for this RTC, copyright, etc, goes to GEnie and Atari Corp. (I'm new at this legal stuff, so bear with me :-) All trademarks, etc owned by their respective owners. Void where prohibited. Ex Pluribus Unim. Que sera sera...

(if anyone has the Thursday Nov 4, 1993 USA Today - check out page 1D - has an article on the video game industry, with a picture of the Jaguar right there in full color!)

And away we go...

----------start transcript----------

<[HoST] ST.LOU> I know there are a lot of new users here tonight... so welcome
<[HoST] ST.LOU> Everyone.... please use the /nam command.... eg.... /nam Bob or
/nam Lou, etc.
<[HoST] ST.LOU> Please use YOUR name.... not mine or Bob's <grin>
<[HoST] ST.LOU> Before getting started, some business about how an RTC works.
<[HoST] ST.LOU>
<[HoST] ST.LOU> While the RTC room is in Listen-Only mode, you can only
address
<[HoST] ST.LOU> our guest when I let you talk.
<[HoST] ST.LOU>
<[HoST] ST.LOU> To get my attention, just /RAIse your hand. Just enter this
from
<[HoST] ST.LOU> your keyboard: /rai
<[HoST] ST.LOU>
<[HoST] ST.LOU> I'll acknowledge your raised hand as soon as I can, but please
be
<[HoST] ST.LOU> patient. I will let you know when your turn is coming up.
<[HoST] ST.LOU>
<[HoST] ST.LOU> Some other RTC commands are:
<[HoST] ST.LOU>
<[HoST] ST.LOU> /hel - Lists all RTC commands.
<[HoST] ST.LOU> /sta - Status (list) of everyone in the RTC room.
<[HoST] ST.LOU> /exi - Exit the RTC, but you remain logged onto GEnie.
<[HoST] ST.LOU> /bye - Log off of GEnie directly from the RTC.
<[HoST] ST.LOU> /rai - Raise your hand. Lets me know you wish to address our
guest.

<[HoST] ST.LOU> /nam - Lets you change your nickname.
<[HoST] ST.LOU> This is the night we've been eagerly anticipating ... the
official
<[HoST] ST.LOU> Jaguar roll out from New York City with a live report on the
news
<[HoST] ST.LOU> conference held just two hours ago.
<[HoST] ST.LOU> As usual for our Dateline Atari RTC's, our special guest is the
<[HoST] ST.LOU> Director of Communications, Bob Brodie. Despite a very hectic
and
<[HoST] ST.LOU> exciting day, Bob has chosen to give GEnie users the first
accounts of
<[HoST] ST.LOU> this evening's news conference.
<[HoST] ST.LOU> Elsewhere in the Atari ST RoundTable there is growing excitement
<[HoST] ST.LOU> about the Jaguar, the host of new game developers and the
unbelievable
<[HoST] ST.LOU> climb of Atari stock which hit a high of 12 1/8 today!

<[HoST] ST.LOU> Before we begin, a special welcome to all new participants in
the Real
<[HoST] ST.LOU> Time Conference - and a friendly 'welcome back' to our growing
number
<[HoST] ST.LOU> of regulars. This evening's conference may get quite busy at my
end so
<[HoST] ST.LOU> please be patient and I will queue you for your questions and
comments
<[HoST] ST.LOU> as soon as I can.
<[HoST] ST.LOU> Now, without further ado, heeeeeeeere's Bob!
<[HoST] ST.LOU>
<[Bob & Ron] BOB-BRODIE> Thanks, Lou. We have a very brief account of the
evening that
<[Bob & Ron] BOB-BRODIE> we'd like to upload at this time, then we'll be happy
to take
<[Bob & Ron] BOB-BRODIE> any and all questions from the audience. I'd like to
express
<[Bob & Ron] BOB-BRODIE> how very excited Ron and I are to be here tonight on
Atari's
<[Bob & Ron] BOB-BRODIE> official online service: GEnie!!! The size of the
group here
<[Bob & Ron] BOB-BRODIE> tonight is just wonderful, and really helps to show
the high
<[Bob & Ron] BOB-BRODIE> level of interest in the Jaguar. With that, here
comes our
<[Bob & Ron] BOB-BRODIE> prepared remarks.
<[Bob & Ron] BOB-BRODIE> Welcome one and all!! We have just returned from the
jungle!! Atari
<[Bob & Ron] BOB-BRODIE> has just rolled out the 64-bit home entertainment
system to a standing
<[Bob & Ron] BOB-BRODIE> room only audience on the 48th floor of the Time-Life
Building in New
<[Bob & Ron] BOB-BRODIE> York City.

<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> I am joined here tonight with my wife Jerri, Ron Kovacs and John
<[Bob & Ron] BOB-BRODIE> Gagne of the Z*Net News Service. We are coming to you live from the
<[Bob & Ron] BOB-BRODIE> Paramount Hotel on 46th St in Manhattan. We invited the cast from
<[Bob & Ron] BOB-BRODIE> Les Miserables, but they were too busy to attend. :) They're just
<[Bob & Ron] BOB-BRODIE> across the street.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> What we have witnessed tonight is a new era for Atari Corporation.
<[Bob & Ron] BOB-BRODIE> The introduction and announcement of release of the Jaguar, a 64-Bit
<[Bob & Ron] BOB-BRODIE> home entertainment machine. On hand at the press conference were Jack
<[Bob & Ron] BOB-BRODIE> Tramiel, sons Sam, Leonard and Garry, myself, Bill Rehbock, James
<[Bob & Ron] BOB-BRODIE> Grunke, Augie Ligouri, Terry Valeski, John Skruch, Susan McBride,
<[Bob & Ron] BOB-BRODIE> Purple Hampton, and many other staff members from Sunnyvale.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Major press agencies such as CBS,NBC, ABC, CNN and local reporters from
<[Bob & Ron] BOB-BRODIE> the New York Times, Wall Street Journal, entertainment and Atari media
<[Bob & Ron] BOB-BRODIE> were in attendance at the event. Heard from nearly ALL of the
<[Bob & Ron] BOB-BRODIE> attendees were WOW and shouts of excitement from the presentation
<[Bob & Ron] BOB-BRODIE> hosted by Sam Tramiel.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Guests were greeted by three male and female jet black leather and
<[Bob & Ron] BOB-BRODIE> vinyl costumed jaguar cats. Tropical foliage, flowering bamboo, moist
<[Bob & Ron] BOB-BRODIE> fog, blue and green tinted pin spots and animal cries, deep from
<[Bob & Ron] BOB-BRODIE> within the heart of the jungle.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Inside the concept changed dramatically, encircling the entire event
<[Bob & Ron] BOB-BRODIE> were Atari Jaguar and Lynx kiosks accented with blue neon rods, ice
<[Bob & Ron] BOB-BRODIE> blue pin spots and more tropical foliage. Positioned in two corners
<[Bob & Ron] BOB-BRODIE> of the room were wire caged with the jaguar costumed dancers.

<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Sam gave a presentation, accompanied by video displays
of the Jaguar
<[Bob & Ron] BOB-BRODIE> TV commercial, and sales videos for the retail stores.
There was no
<[Bob & Ron] BOB-BRODIE> expense spared to convey the messages to the attendees
that Atari is
<[Bob & Ron] BOB-BRODIE> serious about marketing the Jaguar. No less than 12
screens
<[Bob & Ron] BOB-BRODIE> positioned throughout the room carried the video, as
well as Jaguar
<[Bob & Ron] BOB-BRODIE> game play. 10 Jaguar kiosks were stationed throughout
the room, each
<[Bob & Ron] BOB-BRODIE> showing a different video game title. John Skruch and
other
<[Bob & Ron] BOB-BRODIE> employees were also prowling the crowd with
pre-production EPROM carts
<[Bob & Ron] BOB-BRODIE> in hand, ready to show the visitors the future of
Jaguar gaming.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Atari announced the signing of a number of new
developers for the
<[Bob & Ron] BOB-BRODIE> Jaguar tonight, including Virgin, Interplay,
Microprose, UBI Soft,
<[Bob & Ron] BOB-BRODIE> Gremlins Graphics, Millenium, and Accolade. Accolade
will bring
<[Bob & Ron] BOB-BRODIE> Bobsy, Jack Nicklaus Gold, Al Michaels Announces Hard
Ball, Brett
<[Bob & Ron] BOB-BRODIE> Hull Hockey, and Charles Barkley Basketball to the
Jaguar. Atari
<[Bob & Ron] BOB-BRODIE> Games announced that they will be using the Jaguar as
a board for
<[Bob & Ron] BOB-BRODIE> their arcade games. There will be a few other
developers that will be
<[Bob & Ron] BOB-BRODIE> announced in a press release a little later on, as
well as more
<[Bob & Ron] BOB-BRODIE> details regarding the specific titles that they will
be developing for
<[Bob & Ron] BOB-BRODIE> the Jaguar.
<[Bob & Ron] BOB-BRODIE>
<[Bob & Ron] BOB-BRODIE> Tonight, it was also brought to my attention that
there are
<[Bob & Ron] BOB-BRODIE> reports circulating stating that we have stopped our
computer
<[Bob & Ron] BOB-BRODIE> business. I'm happy to state that this rumor is 100%
FALSE!
<[HoST] ST.LOU> YEA!!!!!
<[Bob & Ron] BOB-BRODIE> Atari is not leaving the computer business, we are
still
<[Bob & Ron] BOB-BRODIE> producing the Atari Falcon030. Just a few weeks ago,

James
<[Bob & Ron] BOB-BRODIE> Grunke was here in New York for the Audio Engineering Society
<[Bob & Ron] BOB-BRODIE> Show, where Cubase Audio for Falcon by Steinberg was released. We
<[Bob & Ron] BOB-BRODIE> feel that the Falcon is just now starting to see applications tha
<[Bob & Ron] BOB-BRODIE> take advantage of it's unique capabilities.
<[Bob & Ron] BOB-BRODIE> With that, we're ready to take any questions about the event
<[Bob & Ron] BOB-BRODIE> tonight, Lou, or anything else that our users might like to ask
<[Bob & Ron] BOB-BRODIE> either Ron or I about. ga
<[HoST] ST.LOU> Thanks Bob...
<[HoST] ST.LOU> They're lined up and ready.
<[HoST] ST.LOU> First we have Dave...
<[Dave] D.SHORR> Congrats on the Jaguar, Bob! I did have a computer question but as I'm the first person at the mike, I'll change it;): will I be able to use my Atari SC1224 color monitor with the Jaguar? GA.
** <[HoST] ST.LOU> Room is now listen-only.
<[Bob & Ron] BOB-BRODIE> Hi Dave, yes....you will be able to use youe SC1224 or your
<[Bob & Ron] BOB-BRODIE> SC1435 with the Jaguar. In fact, we'll be using the SC1224 in th
<[Bob & Ron] BOB-BRODIE> in store interactive Kiosks that we're designing. It will requir
<[Bob & Ron] BOB-BRODIE> you to have the optional RGB cable to use the SC1224 with the
<[HoST] ST.LOU> Folks, so many hands just went up it will take a few minutes to acknowledge you all. Please use the /RAI command only once.
<[Bob & Ron] BOB-BRODIE> Jaguar, though. It's a great picture. :) GA
<[HoST] ST.LOU> Next up we have Scott
<[ScottJ] S.CORLEY1> Bob, could you give us an idea as to when Jaguars will be released nationwide? Also, is Atari going to put out a promotional videotape like the one put out by Panasonic for 3d0? It was really impressive. GA.
<[Bob & Ron] BOB-BRODIE> The Jaguar will be sold nationally next year. If you live in an
<[Bob & Ron] BOB-BRODIE> area where the Jaguar is not presently being sold, but wish to
<[Bob & Ron] BOB-BRODIE> purchase on, you can do so via our customer service department.
<[Bob & Ron] BOB-BRODIE> I'll pass all of the information on purchasing a Jaguar to
<[Bob & Ron] BOB-BRODIE> Atari Explorer Online so they can write it up for everyone. We
<[Bob & Ron] BOB-BRODIE> showed the videos tonight at the launch event, and they were
<[Bob & Ron] BOB-BRODIE> very well received. One of them is designed to be run as a
<[Bob & Ron] BOB-BRODIE> commercial, "sandwiched" around another commercial.

<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> OK... Grahan
<[HoST] ST.LOU> Graham Norton is next. GA
<[Graham] G.NORTON> Bob can we expect the Jags in Canada Jan 1?
<[Graham] G.NORTON> Also do you have any cheap Atari stock to sell! :)
<[Graham] G.NORTON> GA
<[Bob & Ron] BOB-BRODIE> I'm honestly not sure what timeframe we're looking at
for Canada
<[Bob & Ron] BOB-BRODIE> Graham :) Cheap stock? Not this week!! :) :)
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Thanks Bob.... on to Nevin Shalit.
<[NevMan] NEVIN-S> Thanks. I have two questions. First, is the Jaguar in
production, or were
<[NevMan] NEVIN-S> you showing a prototype? Second, on a more personal note,
how did it feel
<[NevMan] NEVIN-S> tonight after years of struggling in the computer market to
get the press
<[NevMan] NEVIN-S> to pay attention to you, to have them all there in that
room? ga
<[Bob & Ron] BOB-BRODIE> Yes, the Jaguar is in production...but we did show
units from the
<[Bob & Ron] BOB-BRODIE> pilot production run that was done first. Re you're
second
<[Bob & Ron] BOB-BRODIE> question, it was very nice. Especially nice was to
meet so many
<[Bob & Ron] BOB-BRODIE> of the international press members that I have read
about or
<[Bob & Ron] BOB-BRODIE> corresponded with over the years. I met with Steve
Young of CNN
<[Bob & Ron] BOB-BRODIE> today and spoke with him before and after his filmed
interview
<[Bob & Ron] BOB-BRODIE> with Sam. (Boy does he hate Windows!) Paula Richards
of ST Format
<[Bob & Ron] BOB-BRODIE> was also on hand, and I really enjoyed getting to talk
with her.
<[Bob & Ron] BOB-BRODIE> All in all, a really exciting experience. I know that
Ron
<[Bob & Ron] BOB-BRODIE> enjoyed getting to meet the Tramiels. All of them,
including
<[Bob & Ron] BOB-BRODIE> Jack were very happy to meet one of thier longest, and
best
<[Bob & Ron] BOB-BRODIE> known supporters. When Sam was introduced to Ron, he
spent
<[Bob & Ron] BOB-BRODIE> quite a bit of his time letting Ron know how much he
appreciated
<[Bob & Ron] BOB-BRODIE> his many years of service to the Atari Community.
<[Bob & Ron] BOB-BRODIE> I like him, too. :)
<[Bob & Ron] BOB-BRODIE> Hope that covered it, Nevin. :)
<[HoST] ST.LOU> Whew.... so many people in the queue... new experience :-)
<[HoST] ST.LOU> Thanks everyone for being patient

<[HoST] ST.LOU> On to Ed Lin
<[Ed] E.LIN1> how do the initial Jaguar games compare to the 3DO in terms of graaphics?
<[Bob & Ron] BOB-BRODIE> Ed, I have only seen Crash 'n Burn. It's a different sort of
<[Bob & Ron] BOB-BRODIE> game than we have done so far. We've provided a number of
<[Bob & Ron] BOB-BRODIE> screen shots that are available for downloading from the ST RT
<[Bob & Ron] BOB-BRODIE> library via Atari Explorer Online Magazine. Rather than Ron and
<[Bob & Ron] BOB-BRODIE> I giving you our opinion, why don't you download the Jaguar pics
<[Bob & Ron] BOB-BRODIE> yourself and take a look at them? I'm sure that you'll be
<[Bob & Ron] BOB-BRODIE> very impressed with them. Especially Crescent Galaxy! :) ga
<[HoST] ST.LOU> Sean Dougherty from Processor Direct, the newest Atari magazine, is next...
<[Sean@TWP] P-DIRECT> Bob -- To change the topic a little, Atari may still be producing the Falcon030, but with perhaps only a few thousand units sold it is obvious something more needs to be done than make them. <grin>
<[Sean@TWP] P-DIRECT> Does Atari have plans to sell the Falcon030 through less passive means? For instance, with the help of some enthused writers, the Falcon030 has gained the interest of several special interest magazines, and it seems this would be the perfect way to "sneak" into a market, and at very little expense... GA
<[Bob & Ron] BOB-BRODIE> Sean, at this point we have no such plans. We're always...
<[Bob & Ron] BOB-BRODIE> interested in listening to proposals, though. I'd suggest that
<[Bob & Ron] BOB-BRODIE> you contact Garry Tramiel if you have some suggestions about
<[Bob & Ron] BOB-BRODIE> selling the Falcon030 via a unique means. :)
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Thanks Sean. Rob Anisko is next
<[Zombie] R.ANISKO> ok (home the buffer works here...)
<[Zombie] R.ANISKO> Bob, with the Jaguar about to come out, and the Lynx
<[Zombie] R.ANISKO> available, is Atari planning on releasing the same
<[Zombie] R.ANISKO> games on both systems - it makes nice cross-over
<[Zombie] R.ANISKO> sales and advertising... (like Nint*ndo w/ the SNES and
<[Zombie] R.ANISKO> Gameboy)? ga
<[Zombie] R.ANISKO>
<[HoST] ST.LOU> It worked!
<[HoST] ST.LOU> :-)
<[Bob & Ron] BOB-BRODIE> Yes and no, Rob. :)
<[Bob & Ron] BOB-BRODIE> There is no question that there is some terrific opportunities to
<[Bob & Ron] BOB-BRODIE> do EXACTLY what you've described. However, on the other hand we

<[Bob & Ron] BOB-BRODIE> know that the hand held market is no where as big as the home
<[Bob & Ron] BOB-BRODIE> console market. Plus, the Jaguar makes possible things that canno
<[Bob & Ron] BOB-BRODIE> be done on ANY OTHER GAME MACHINE, including the Lynx. So it's
<[Bob & Ron] BOB-BRODIE> only natural, IMHO, that developers will look to do something
<[Bob & Ron] BOB-BRODIE> new and exciting to stretch the envelope with the Jaguar. We do
<[Bob & Ron] BOB-BRODIE> envision there being some titles that will be made available for
<[Bob & Ron] BOB-BRODIE> the Lynx as well though. ga
<[HoST] ST.LOU> We still have more than 20 in the queue... on to Dale Ellis....
<[Dale] D.ELLIS16> Congrads Bob, Ron, John, Jerri. Jerri was Bob really there or across the street at Les Miserables? ;-) Real Questions:Have you thought about selling any of the products via TV Shopping? Any TV shows about the Jag? Like Discovery or .....
<[Dale] D.ELLIS16> FutureWatch? GA
<[Bob & Ron] BOB-BRODIE> Jerri says he was really there...thanks for checking up on him.
<[Bob & Ron] BOB-BRODIE> Now, on to the "real" questions, we are open to all of those
<[Bob & Ron] BOB-BRODIE> opportunities, but first want to get back into the "regular"
<[Bob & Ron] BOB-BRODIE> retail environment. We feel that it is important that consumers
<[Bob & Ron] BOB-BRODIE> be able to go into a store and actually see, and try out a
<[Bob & Ron] BOB-BRODIE> Jaguar to fully appreciate it. So we're very excited to be
<[Bob & Ron] BOB-BRODIE> in stores like Toys 'R Us, The Wiz, Babbages, Electronic Boutique
<[Bob & Ron] BOB-BRODIE> Kaybee Toys....and others.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Mark Santora... if you are still here, please /raise. Your number has gone bye bye
<[HoST] ST.LOU> Meanwhile, on to Gary
<[Gary] G.STOLLMAN> Bob, I am interested in programming for Atari as a developer. In your honest opinion, is this release the "do-it" thing that will put Atari back in the forefront of computers,and why is it taking so long for the Falcon to get software???
<[Gary] G.STOLLMAN> ga
<[Bob & Ron] BOB-BRODIE> Hi Gary. Yes, I think that the Jaguar is going to be a very
<[Bob & Ron] BOB-BRODIE> big product for Atari. If you hae aspirations about developing
<[Bob & Ron] BOB-BRODIE> for the Jaguar, I'm sure that Bill Rehbock would like to talk
<[Bob & Ron] BOB-BRODIE> to you. Re the Falcon...I think there are several

reasons that
<[Bob & Ron] BOB-BRODIE> it's taking so long. #1 - Poor Sales. The economy in
California
<[Bob & Ron] BOB-BRODIE> where we do much of our business, is MISERABLE. And
it's true
<[Bob & Ron] BOB-BRODIE> not only for Atari, but other companies as well. One
of the
<[Bob & Ron] BOB-BRODIE> stock analysts that was at the event tonight told me
that
<[Bob & Ron] BOB-BRODIE> Apple is now sitting on a HUGE inventory of products.
He said
<[Bob & Ron] BOB-BRODIE> numbers that frankly, I had a hard time believing. So,
the
<[Bob & Ron] BOB-BRODIE> computer hardware business is just really tough right
now. One of
<[Bob & Ron] BOB-BRODIE> the other reasons it's taking so long is us: we've
reduced our
<[Bob & Ron] BOB-BRODIE> company in size to such a small level that it is
really tough
<[Bob & Ron] BOB-BRODIE> to be able to do everything that we would like to be
able to do.
<[Bob & Ron] BOB-BRODIE> For example, there was some staff at the event tonight
from
<[Bob & Ron] BOB-BRODIE> ST Informer. But I never had a chance to spend more
than a few
<[Bob & Ron] BOB-BRODIE> seconds with them at a time. I hate that, frankly.
And think
<[Bob & Ron] BOB-BRODIE> that once we've added some additional staff we'll be
in a
<[Bob & Ron] BOB-BRODIE> better position to do the things that we need to do to
properly
<[Bob & Ron] BOB-BRODIE> support ALL of our products. GA
<[HoST] ST.LOU> Thanks Bob. Please welcome Delroy Blake!
<[delroy Blake] D.BLAKE> I have 3 questions for you.
<[delroy Blake] D.BLAKE> 1) What are the specs on the Jag over sees news
travels slow
<[delroy Blake] D.BLAKE> 2) do you inted to market to the Army-AirForce Excange
Stores Lots of people
<[delroy Blake] D.BLAKE> with money to spend and
<[delroy Blake] D.BLAKE> 3) What ever happen to UNIX FOR THE TT,
<[delroy Blake] D.BLAKE> ga
<[Bob & Ron] BOB-BRODIE> Good evening Delroy, thank you for attending our RTC
tonight!!!
<[Bob & Ron] BOB-BRODIE> Regarding your questions....WOW! :) I'll give you a
quick
<[Bob & Ron] BOB-BRODIE> run down on the specs, but I'd prefer that you check
out the
<[Bob & Ron] BOB-BRODIE> library here on GEnie in the ST RT for file
AEO_SE1.ZIP
<[Bob & Ron] BOB-BRODIE> That file has full set of press releases including

block diagrams
<[Bob & Ron] BOB-BRODIE> of the entire Jaguar system. The Jaguar is a full 64 bit system
<[Bob & Ron] BOB-BRODIE> that has 5 microprocessors on three chips, including a 64 Bit
<[Bob & Ron] BOB-BRODIE> RISC processor, a 32 Bit RISC processor, and a 68000. The bus
<[Bob & Ron] BOB-BRODIE> is a full 64 bit bus. It is capable of 32 bit color, with over
<[Bob & Ron] BOB-BRODIE> 16.7 million colors, and 16 bit stereo CD sound. BTW, I've just
<[Bob & Ron] BOB-BRODIE> been informed by Travis Guy, Editor of AEO that the correct file
<[Bob & Ron] BOB-BRODIE> name is AEO_SE_J.ZIP :) Thanks, Travis. The file will also
<[Bob & Ron] BOB-BRODIE> have some Jaguar screen shots in it in GIF format. :) Re the
<[Bob & Ron] BOB-BRODIE> Army/Air Force stuff....not right away, but maybe next year. At
<[Bob & Ron] BOB-BRODIE> first we're doing a New York/San Francisco rollout of the
<[Bob & Ron] BOB-BRODIE> Jaguar this year, then we'll finish our plans for the rest of
<[Bob & Ron] BOB-BRODIE> the US later. Certainly, we want to find a way to provide the
<[Bob & Ron] BOB-BRODIE> Jaguar to the Military. Lastly, re TT UNIX, we cancelled the
<[Bob & Ron] BOB-BRODIE> project because we didn't feel that our version of UNIX was
<[Bob & Ron] BOB-BRODIE> cost effective enough to be chosen by a broad base of people.
<[Bob & Ron] BOB-BRODIE> We did feel that Atari UNIX could have been run as a text based
<[Bob & Ron] BOB-BRODIE> UNIX on the Falcon, but we couldn't have close to being able to
<[Bob & Ron] BOB-BRODIE> support it properly, so we cancelled it. GA
<[HoST] ST.LOU> Bob, there are over 20 in the queue and they are being extremely patient with me as I try to keep up. :-) Our next speaker is Chris Oates...
<[Chris] C.OATES2> Two questions: First, when might we see the first Jaguar TV ads? Second, about how many Jaguars have been manufactued to date?
<[Chris] C.OATES2> GA
<[Bob & Ron] BOB-BRODIE> Lou, in light of all the people in line, I think we should
<[Bob & Ron] BOB-BRODIE> restrict everyone after Chris to just one question til we get
<[Bob & Ron] BOB-BRODIE> through the que.
<[HoST] ST.LOU> ... or you could just answer ONE question :-)
<[Bob & Ron] BOB-BRODIE> Chris, in the areas that the Jaguar is going to be sold (NY or

<[Bob & Ron] BOB-BRODIE> San Francisco) you'll start to see teaser ads next
week. The
<[Bob & Ron] BOB-BRODIE> "real ads" will start shortly after that. Re how many
Jags have
<[Bob & Ron] BOB-BRODIE> been built, to be honest, I don't know. I'd need to
check with
<[Bob & Ron] BOB-BRODIE> our VP of Manufacturing....he's not here. It's an
incredibly
<[Bob & Ron] BOB-BRODIE> small hotel room. :)
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> OK... Sir Fransis is next
<[Sir Fransis] K.DRAKE> What do you forsee being the first network use for the
Jaguar (Other than ComLynx)
<[Sir Fransis] K.DRAKE> ga
<[Bob & Ron] BOB-BRODIE> I really don't know. :) I haven't had enough time to
think
<[Bob & Ron] BOB-BRODIE> about that yet. For the most part, we've been looking
at the
<[Bob & Ron] BOB-BRODIE> system as a game machine for the home to compete
against Sega
<[Bob & Ron] BOB-BRODIE> and Nintendo, not so much as a network machine. I do
know that
<[Bob & Ron] BOB-BRODIE> Sam is very keenly interested in interactive TV via
cable. ga
<[HoST] ST.LOU> Tony Wetmore is next Bob.
<[Tony Tramiel] WETMORE> Bob and everyone: Bravo! You've all done an
incredible job!
<[Tony Tramiel] WETMORE> I have 2 questions, but they're related... (actually,
I have more)
<[Tony Tramiel] WETMORE> 3) Will I be able to mail-order a Jag from Atari this
month?
<[Tony Tramiel] WETMORE> 4) If not, when will retail stores in NY begin
receiving Jags?
<[Tony Tramiel] WETMORE> (oops)
** <[Tony] WETMORE> was <[Tony Tramiel] WETMORE>.
<[Bob & Ron] BOB-BRODIE> Yes, and the week before Thanksgiving is when they are
due in.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Chris Cassaday....
<[Chris] C.CASSADAY> Bob, can you comment about the possible Dallas
distribution point?
<[Chris] C.CASSADAY> Will the Jaguar be sold at the Incredible Universe this
fall? GA
<[Bob & Ron] BOB-BRODIE> I've not been told officially that we're going to be
there,
<[Bob & Ron] BOB-BRODIE> but I hear tell that we are, Chris.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Sam Rapp!
<[Sam030] SAM-RAPP> Hi Bob, Ron, (and others...) What are the possibilities for
a modem

<[Sam030] SAM-RAPP> for the Jag? Is there an RS-232 on the expansion port? Where is my
<[Sam030] SAM-RAPP> T-shirt! ;-)
<[Sam030] SAM-RAPP> GA
<[Bob & Ron] BOB-BRODIE> Sam, Ron Kovacs is wearing your T-Shirt. He looks great in it.
<[Bob & Ron] BOB-BRODIE> So does John Gagne. We're also going to bring out baseball caps.
<[Bob & Ron] BOB-BRODIE> Black with a Jaguar logo, sort of like the T-Shirt.
<[Bob & Ron] BOB-BRODIE> Yes, there is an RS-232 on the expansion port, and we envision
<[Bob & Ron] BOB-BRODIE> using the DSP connection to be a modem. ga
<[HoST] ST.LOU> Thanks. I am sorry to say that I will have to cut off any more /raises.
<[HoST] ST.LOU> There are still 20 in the queue who will be allowed their questions.
<[HoST] ST.LOU> Dave Shorr is next
<[Dave] D.SHORR> Has Atari considered offering a cooperative multitasking environment to its ST customers? Couldn't the multitasking AES and Desktop contained in the current version of MultiTOS be loaded without MiNT? GA.
<[Bob & Ron] BOB-BRODIE> Dave, I'm just not techincal enough to discuss that with you.
<[Bob & Ron] BOB-BRODIE> The best solution that I can see now is to use MultiTOS with
<[Bob & Ron] BOB-BRODIE> Geneva from Gribnif Software.
<[Bob & Ron] BOB-BRODIE> Sorry, GA.
<[HoST] ST.LOU> Ron Hall is next, Bob
<[GOT FALCON!] R.HALL49> More than 1 question but only requires small answers! :) I just yesterday got my base unit Falcon(yea!) when can I get an official hard drive upgrade kit? Will Atari be able to challenge CD-32 in Europe since they are producing 20,000 units a week now? Tantalize me with visions of a Lynx II with the Jaguar chipset!!! Final Question...Jaguar sales truly to be funneled to Falcon!!! (hope,hope,hope) LOVE my Falcon BTW...thanx GA
<[Bob & Ron] BOB-BRODIE> Don't know about the HD kit, get a SCSI-II cable and go external
<[Bob & Ron] BOB-BRODIE> for now. The drives are bigger and cheaper than the tiny IDEs.
<[Bob & Ron] BOB-BRODIE> We will not challenge CD-32 in Europe...we will defeat them.
<[Bob & Ron] BOB-BRODIE> Yes. ga
<[HoST] ST.LOU> Kevin Houser...
<[Kevin Houser] PG.MUSIC> Bob, any hope for a Falcon based dev system for the Jag &/or Lynx? Also, could I get a 'factory' direct Jag when I go to Charlotte this weekend. <g> I'm interested in doing music related Jag titles. Doezit have a Midi port? <g> Kevin in Atlanta, PG Music Atari development... BTW, all PG Music stuff (new) is written on a Falcon030/14/120 <g> Good European sales too. :) ... GA
<[Bob & Ron] BOB-BRODIE> Hi Kevin. Yes, there is a TOS based dev system for the Jaguar
<[Bob & Ron] BOB-BRODIE> now. I think it is quite logical to assume that it

will be
<[Bob & Ron] BOB-BRODIE> ported to the Falcon. Sorry, IBM is not selling the Jaguar
<[Bob & Ron] BOB-BRODIE> Factory Direct at all. They build it, warehouse it, and ship it.
<[Bob & Ron] BOB-BRODIE> That's all. No MIDI port, but wow! It can make terrific music!!
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Charles Smeton of NewSTar Tech....
<[NewSTar Tech] C.S.SMETON> Bob, where (what stores) and when can I tell my buddy in NYC to buy a Jaguar for me? ga
<[Bob & Ron] BOB-BRODIE> The Wiz, Babbages, Toys 'R Us, Electronic Boutique, Kaybee Toys,
<[Bob & Ron] BOB-BRODIE> that enough Charles? GA
<[HoST] ST.LOU> Here comes Travis Guy from Atari Explorer Online... the best source of Atari news!
<[FSU #1!] AEO.MAG> Thanks Lou! <blush>
<[FSU #1!] AEO.MAG> Evening sirs! It sounds like everyone had a great time tonight. Bob, I think I
<[HoST] ST.LOU> Hi Andy. You are two away. Have question ready and wait for talk-mode signal.
<[HoST] ST.LOU> Ooops.
<[HoST] ST.LOU> :-)
<[Bob & Ron] BOB-BRODIE> OK Lou.
<[FSU #1!] AEO.MAG> can speak for every Atarians in saying it's good to finally have Atari back on track
<[FSU #1!] AEO.MAG> to the forefront - where we feel Atari belongs. Can you give us some specific
<[FSU #1!] AEO.MAG> reactions from some of the crowd at the event? Paul Harvey mentioned Atari and
<[FSU #1!] AEO.MAG> the Jaguar today in his radio show, and it was very positive. Go Atari!
<[Bob & Ron] BOB-BRODIE> Evening, Travis! It's great to see you online tonight!! Ron
<[FSU #1!] AEO.MAG> (And I want a Jaguar cap!) GA
<[Bob & Ron] BOB-BRODIE> sez Hi!! We at Atari are very grateful for the fine job that you
<[Bob & Ron] BOB-BRODIE> and rest of the very fine staff at Atari Explorer Online do to
<[Bob & Ron] BOB-BRODIE> support the entire Atari Community. If only all publications
<[Bob & Ron] BOB-BRODIE> would follow your excellent example of how to do an online mag!
<[Bob & Ron] BOB-BRODIE> (Well, I can dream, can't I?!?!?!)
<[Bob & Ron] BOB-BRODIE> Today, USA Today ran a very nice article about Video Games, and
<[Bob & Ron] BOB-BRODIE> featured a full color picture of the Jaguar on the LIFE Section
<[FSU #1!] AEO.MAG> Bob, any magazine in particular you'd like to see "shape up?"

<[Bob & Ron] BOB-BRODIE> of the paper. The San Jose Mercury News also ran a terrific
<[Bob & Ron] BOB-BRODIE> article on the Jaguar. Many of the people that were at the
<[Bob & Ron] BOB-BRODIE> event tonight were financial writers, or business writers. They
<[Bob & Ron] BOB-BRODIE> to a large degree, were not exposed to the Jaguar games until
<[Bob & Ron] BOB-BRODIE> tonight for the very first time. They thought that the games
<[Bob & Ron] BOB-BRODIE> looked and sounded great, as well as the pricing on the Jaguar
<[Bob & Ron] BOB-BRODIE> for real consumers, rather than the high prices that 3DO is
<[Bob & Ron] BOB-BRODIE> charging for their player.
<[Bob & Ron] BOB-BRODIE> Overall, it was a very exciting night. Many people came to see
<[Bob & Ron] BOB-BRODIE> how serious Atari was about the Jaguar... they came skeptics
<[Bob & Ron] BOB-BRODIE> and left believers!
<[FSU #1!] AEO.MAG> Wonderful!
<[Bob & Ron] BOB-BRODIE> Look for a Jaguar cover on an upcoming issue of Die Hard Game
<[Bob & Ron] BOB-BRODIE> Fan, as well as 8 full color pages of coverage from Die Hard!
<[Bob & Ron] BOB-BRODIE> GA
<[HoST] ST.LOU> I missed John Battey about 5 back so I will let him into line here. Thanks to Scott for waiting a bit longer (and to everyone else still in the queue).
<[J.Battey] J.BATTEY1> Was Ziff-Davis there tonight? (What, no coffee mugs!) ga
<[Bob & Ron] BOB-BRODIE> I'd have to look at the final attendance list to be sure. There
<[Bob & Ron] BOB-BRODIE> is a list of people that did RSVP, but not all of them made it.
<[Bob & Ron] BOB-BRODIE> Not sure about Ziff, sorry.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Scott Corley
<[ScottJ] S.CORLEY1> Bob, why did Atari raise the list price of the Jaguar by $50? Also do you have any idea of the price that Jaguar games will sell for? Thanks. GA.
<[Bob & Ron] BOB-BRODIE> To cover the cost of the included game, which was a bit more
<[Bob & Ron] BOB-BRODIE> than we had expected it to be. The price of the games will be
<[Bob & Ron] BOB-BRODIE> in the 49-89 range, depending on the title, and the developer. ga
<[HoST] ST.LOU> OK....
<[HoST] ST.LOU> On to Andy Smith.
<[Andy] L.SMITH70> Bob... First, Congrats!! Second, I heard the following on the Internet... I heard the Jaguar has a 'startup' sequence consisting of the

Atari Fuji, a digitized roar, and a rotating cube with a jaguar on each side. True? false? More info? :) Also glad to hear you got Virgin! ga
<[Bob & Ron] BOB-BRODIE> Andy, TRUE! When the Jaguar is first turned on, the Red Jaguar
<[Bob & Ron] BOB-BRODIE> logo comes on the screen, there is a digitized roar, and then a
<[Bob & Ron] BOB-BRODIE> group of letters spelling out ATARI drop down from the top of the
<[Bob & Ron] BOB-BRODIE> screen. Then there is a cube with digitized pics of a jaguar
<[Bob & Ron] BOB-BRODIE> that rotates while a quick version of "Have you played Atari
<[Bob & Ron] BOB-BRODIE> today?" is played.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Bob, we have a newsflash from Gene Windell....
<[HoST] ST.LOU> <gene is typing like made>
<[HoST] ST.LOU> Let's go on to Rod Martin....
<[HoST] ST.LOU> Rod... GA
<[Network 23] R.MARTIN22> Bob, is Atari still earmarking $3 million for the NY/SF release, and what is the $$$ for 1994 nationwide release?
<[Network 23] R.MARTIN22> ga
<[Bob & Ron] BOB-BRODIE> Yes. We are earmarking that much for this y ear's release
<[Bob & Ron] BOB-BRODIE> and we are finalizing next year's plans now.
<[Bob & Ron] BOB-BRODIE> Part of the planning is dependent on who our retail partners are.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Gene... GA
<[Gene] E.WINDELL> About 10 minutes ago, CNN Headline News described the Jag's technical features as part of a larger story about new computer graphics technology. Other than the Fuji logo, no pictures were shown. I'm sure they will play it again.
<[HoST] ST.LOU> Thanks Gene. Rob Anisko just picked up USA Today and found the story on page 1D. Thanks Rob.
<[HoST] ST.LOU> ON we go.......
<[HoST] ST.LOU> Mike Lipson
<[Bob & Ron] BOB-BRODIE> Gene, who was the CNN correspondent? Was it Steve Young?
<[Gene] E.WINDELL> don't know.
<[HoST] ST.LOU> GA Mike
<[Bob & Ron] BOB-BRODIE> Thanks! Gene
<[Mike Lipson] M.LIPSON> Hi Bob and Lou! Does the Atari/IBM contract allow IBM to license Jaguar technology for Big Blue's computers and is IBM
<[Mike Lipson] M.LIPSON> interested in having Jaguar expansion boards?
<[Mike Lipson] M.LIPSON> GA
<[Bob & Ron] BOB-BRODIE> No, the contract does not allow IBM to use the Jaguar chipset
<[Bob & Ron] BOB-BRODIE> for any of their products. We are having some discussions with
<[Bob & Ron] BOB-BRODIE> them about other possible uses for the Jaguar chipset.

GA
<[HoST] ST.LOU> Ok... Frank Cuccia.
<F.CUCCI> Bob, did you let the cat out of the bag i.e.the BIG developer that
was to sur
<F.CUCCI> prise all of us and is the TT030 still alive ga
<[Bob & Ron] BOB-BRODIE> Which BIG developer??? Accolade, Virgin, or
Interplay? :-)
<[HoST] ST.LOU> Pick one!
<[Bob & Ron] BOB-BRODIE> And yes! GA
<[HoST] ST.LOU> Tim at AEO is next.
<[Tim@AEO] AEO.8> On an earlier question about the falcons, I happen to know
that
<[Tim@AEO] AEO.8> Tecnation and High End will be selling Falcons as use in
Discos as
<[Tim@AEO] AEO.8> lighting systems, with nifty video effects. anywayss my
question:
<[Tim@AEO] AEO.8> When is the jaguar to be sold in europe? (BTW, that product
is called
<[Tim@AEO] AEO.8> Cyber V)
<[Bob & Ron] BOB-BRODIE> Yes they are Tim, thanks for pointing that out for
everyone. We
<[Bob & Ron] BOB-BRODIE> will be selling some units in the holiday season this
year in
<[Bob & Ron] BOB-BRODIE> Europe. GA
<[HoST] ST.LOU> Thanks. Dave Freeland
<[HoST] ST.LOU> has been waiting a long time
<[David] D.FREELAND> Are there any plans to advertise the Falcon030 at all?
What can you tell us about new Falcon products such as DSP modem, etc... It
seems the Jaguar should allow Atari to push the Falcon more than it has so far.
Go Jaguar!!!
<[David] D.FREELAND> ga
<[HoST] ST.LOU> Thanks Dave
<[Bob & Ron] BOB-BRODIE> Dave.... Plans to advertise the Falcon remain
unchanged. We
<[Bob & Ron] BOB-BRODIE> will advertise cooperativly in the markets where we
have an
<[Bob & Ron] BOB-BRODIE> advantage, such as music with partners like Steinberg,
thank you!
<[Bob & Ron] BOB-BRODIE> GA
<[HoST] ST.LOU> Lucky Seven left, Bob and Ron.
<[HoST] ST.LOU> Harj Nagra....
<[Harj] H.NAGRA1> What games will be available for the Jaguar this
<[Harj] H.NAGRA1> year? (...just saw the Atari Fuji on CNN about
<[Harj] H.NAGRA1> 10 minutes ago!!!)
<[Harj] H.NAGRA1> You should let Video Games magazine know that the
<[Harj] H.NAGRA1> Jag is truly 64-bit and not 32-bit as they state in
<[Harj] H.NAGRA1> their latest issue. GA
<[Bob & Ron] BOB-BRODIE> Bob is near death! :-) Ron typing@
<[HoST] ST.LOU> Hehehehe...
<[Bob & Ron] BOB-BRODIE> Hi Harj... Bob has already written a letter to Video

Games and
<[Bob & Ron] BOB-BRODIE> will mail it when he returns to Sunnyvale. Your
right, they
<[Bob & Ron] BOB-BRODIE> certainly made some mistakes! GA
<[HoST] ST.LOU> Jungle Jim!
<J.THORNHILL> Bob, can you tell us specifically what the Atari vs. Sega suit is
all about concerning the scrolling? ga
<[Bob & Ron] BOB-BRODIE> THe four games available will be:
<[Bob & Ron] BOB-BRODIE> Jim Thornhill, other than the press release, I have no
other
<[Bob & Ron] BOB-BRODIE> information to share with you at this time.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> Were you going to list 4 games?
<[Bob & Ron] BOB-BRODIE> CyberMorph, Crescent Galaxy, Raiden and Dynodudes. We
expected
<[Bob & Ron] BOB-BRODIE> Checkerd Flag to be ready but it's late! GA
<[HoST] ST.LOU> OK.... James Vogh.
<[James] J.VOGH> How large are the areas (NY and SF) where the Jaguar will be
released. For example, will
<[James] J.VOGH> stores in Connecticut and possibly Massachusetts also have the
Jaguar?
<[James] J.VOGH> ga
<[Bob & Ron] BOB-BRODIE> James: I believe for the retail chains we are talking
metro NY
<[Bob & Ron] BOB-BRODIE> and the San Fran bay area. Connecticut _MIGHT_ see a
few Jags
<[FSU #1!] AEO.MAG>
<[Bob & Ron] BOB-BRODIE> but I really doubt Mass will except for our current
Atari ,
<[Bob & Ron] BOB-BRODIE> dealers. GA
<[HoST] ST.LOU> Sandy from AEO
<[--Sandy] AEO.9> My 1st RTC. Can you tell us anything about how you interact
with
<[--Sandy] AEO.9> Time Warner
<[HoST] ST.LOU> Then Gregg from AEO
<[--Sandy] AEO.9>
<[--Sandy] AEO.9>
<[Bob & Ron] BOB-BRODIE> Sandy.. Welcome to your FIRST RTC here on GEnie.
<[--Sandy] AEO.9> If not Love you all anyway ga
<[Bob & Ron] BOB-BRODIE> We have an arrangement with Time-Life to have access
to their
<[Bob & Ron] BOB-BRODIE> vast library of film and sound clips to be used with
Jaguar
<[Bob & Ron] BOB-BRODIE> titles. Other than that, they own about 23% of Atari.
GA
<[HoST] ST.LOU> Gregg... from Computer STudio?
<[Gregg] AEO.7> Well, yes as a matter of fact <grin>. I'm impressed, I wish I
could have been
<[Gregg] AEO.7> up there in NY for the show.... However, while we're all
hoping to see the Jag become

<[Gregg] AEO.7> THE dominate factor in the game industry, I'm more Atari computer oriented and
<[Gregg] AEO.7> have to ask if you've any idea how long it will be before we can expect to see
<[Gregg] AEO.7> the Jag's fnatastic graphics and audio made available in a TOS-based Atari computer
<[Gregg] AEO.7> and/or on a VME card for the TT/MegaSTe line? thanks, and keep up the great work.
<[Gregg] AEO.7> GA
<[HoST] ST.LOU> Thanks Gregg.
<[Bob & Ron] BOB-BRODIE> Gregg, Nice to hear from you. At this point in time, it's nearly
<[Bob & Ron] BOB-BRODIE> impossible to project when that might happen. For one thing...
<[Bob & Ron] BOB-BRODIE> some of the developer tools for the Jaguar are still maturing.
<[Bob & Ron] BOB-BRODIE> Also,
<[Bob & Ron] BOB-BRODIE> doing such an enterprise would require the addition of even
<[Bob & Ron] BOB-BRODIE> more staff to assure that it could be done properly. Let us get
<[Bob & Ron] BOB-BRODIE> the Jaguar properly launched, supported, and in the market
<[Bob & Ron] BOB-BRODIE> place and we'll see that we can do on the computer side.
<[Bob & Ron] BOB-BRODIE> ga
<[HoST] ST.LOU> But we can sure hope for the future. Right, Gregg? :-) Next we have Sir Fransis...
<[HoST] ST.LOU> Sir Fransis?
<[Sir Fransis] K.DRAKE> How many sounds can the Jag generate simultaneously (3DO=8)? Where is the ComLynx port? Any CD titles in development (7th Guest)? Thanks 4 coming! ga
<[Bob & Ron] BOB-BRODIE> The ComLynx port is incorporated in the expansion port at the
<[Bob & Ron] BOB-BRODIE> rear of the machine. ga
<[HoST] ST.LOU> Final question comes from Tony Wetmore.
<WETMORE> A couple real quickies (I hope): Will the "accessory" cables
<WETMORE> and such (S-Video, etc) be available at launch (ie. 2 weeks or so)?
<WETMORE> Also, can we expect/hope for any Atari coin-op translations next
<WETMORE> year? Such as: Hard/Race Drivin', Steel Talons, etc?
<WETMORE> And, again - thanks(!!) for coming online and staying so long!
** <[--Sandy] AEO.9> disconnected.
<[Bob & Ron] BOB-BRODIE> Yes, there will be conversions of coin op games, although not
<[Bob & Ron] BOB-BRODIE> all of them will be Atari Games products. For instance,
<[Bob & Ron] BOB-BRODIE> Virtua Racing is one of the games that we are looking at as a
<[Bob & Ron] BOB-BRODIE> model for what will be done with at least one of the racing games

<[Bob & Ron] BOB-BRODIE> that we're working on. Re the cables, not 100% sure on that,
<[Bob & Ron] BOB-BRODIE> although they should be along quite soon. :) ga
<[HoST] ST.LOU> A record breaking night for Atari and Dateline Atari! Record length, record number of questions, record number of attendees. What can I say. Congratulation to Bob and his guest (and friend) Ron Kovacs for their service above and beyond. GA
<[Bob & Ron] BOB-BRODIE> Lou, THANKS! It has been a really long day for us here in New
<[Bob & Ron] BOB-BRODIE> York. I'm very grateful to our official online service GEnie
<[Bob & Ron] BOB-BRODIE> and to our friends that staff the Atari RT's for allowing us to
<[Bob & Ron] BOB-BRODIE> share this very special evening for a Dateline: Atari Conference.
<[Bob & Ron] BOB-BRODIE> While we normally do this on a Friday night, I will be up in the
<[Bob & Ron] BOB-BRODIE> air, on my way home to California when the conference will
<[Bob & Ron] BOB-BRODIE> normally be running. Thanks to GEnie for allowing us some slack
<[Bob & Ron] BOB-BRODIE> in scheduling this time. :) I'm also grateful that my very
<[Bob & Ron] BOB-BRODIE> good friend Ron Kovacs could be here to share his impressions of
<[Bob & Ron] BOB-BRODIE> the Jaguar launch event, as well as help with the typing tonight.
<[Bob & Ron] BOB-BRODIE> A rare privlidge for me to hand over the keyboard and just
<[Bob & Ron] BOB-BRODIE> give my answers without having to type all night long!! :)
<[Bob & Ron] BOB-BRODIE> Thank you all for coming. We had a very enjoyable evening. And
<[Bob & Ron] BOB-BRODIE> we look forward to our next session of Dateline: Atari with you
<[Bob & Ron] BOB-BRODIE> next month, here on the official Atari online resource: GEnie.
<[Bob & Ron] BOB-BRODIE> I hope that you all enjoy the rest of the evening, and the
<[Bob & Ron] BOB-BRODIE> beginning of the holiday season. Happy Thanksgiving to you all
<[Bob & Ron] BOB-BRODIE> Good night!
<[HoST] ST.LOU> You are most welcome, Bob. The pleasure truly is ours. Folks, look for this transcript in AEO or in library 13 on Saturday morning. Thanks to everyone for coming and have a safe drive home :-) <Bob, get to sleep!!>

Hello,

I was wondering, are there any demo versions available for
Magix. And a pricelist? And offcourse a compatability list?

You see, contrary to popular thought, MiNT/MTOS is not
everything. And contrary to flamers, I don't judge things I've never
seen. It is just that I need something for my braindead TOS1.4.

all info is appreciated,
Gerco.

So to use Connect, all that is really needed is just CONNECT.PRG and
the RSC? Or is more required?

And what is PFXPAK? I have looked for this on wuarchive, it doesn't
seem to be there.

Thanks!

Well, sort off. Not reliably. You need to rename MROS_xxx to MROS_xxx.PRG
and have in the AUTO folder before MINT.

Ah, sounds as if it is not the fault of Mag!X that Cubase won't run. Cubase
seems to be the result of unclean programming methods.

> Atari hardwares.

D&P still sells ST stuff. They just had an add in this month's Current Notes.
I am not sure about BRE.

> I would like to know which company is more reliable and will give the best
> (lowest) price.

I have had good experiences with both D&P and Toad.

> Information on the companys' name, their FAX number and current selling
> price of the ICD LINK would be most appreciated.

For TOAD computers,
(410) 544-6943 (voice)
(410) 544-1329 (FAX)
(410) 544-6999 (BBS)
(800) 448-TOAD (orders)

For D&P computers,
(800) 535-4290 (voice)
(216) 926-3842 (voice and FAX)

The Link seems to be going for $90-$99US. I suggest you also order a copy
of Current Notes, if for nothing other than the advertiser's list.

jR> g
jR> the 56000 programming guide from Oregon research.

I "ported" the motorola port of gcc for the 56000 to Falcon, but it is not
of much use right now, since we lack the motorola library that handles
things like mul,div,mod etc. I talked to my Atari developer support contact
about whether this library could become part of the dev. kit. He said he
would ask atari US about this, but I have not heard anything after that.

The C-compiler itself compiles very easily on the Falcon, just pretend you
are a sun-3 in the config files and hit make. It produces code that the
asm56000.ttp from motorola will "eat" quite happily, but when you try to
link anything you suffer from the lack of the library.

I suppose one could write an emulator of the lib, but since there is no
docs as to what the library *should* do, this will take more time than I
have to give such a project.

Any Volunteers ?

hello!
i just uploaded MJUZAK11.ZIP to ftp.uni-erlangen.de
i hope you find it in two days or so in pub/atari/falcon/sound/misc

short description

V1.1 of the soundtracker-like musiceditor MJUZAKK for Falcon.
-Six tracks in CD-quality.
-Eight tracks using 16 Bit-25khz.
-Over 40 instruments (samples) of whatever length and quality in one song.

News in V1.1
-Extended Sampleeditor.
-You can switch off every track separately.
-!!!!ENGLISH DOCUMENTATION TOO!!!!
-etc...

LONGJON.ZIP is a large-scale MJUZAKK-song! Get it!
```

1376. Falcon040

Newsgroup: comp.sys.atari.st
Date: 1993-11-06 21:49:45 UTC
From: bunka@mibm.ruf.uni-freiburg.de
Message-ID: <2bh65p$9vt@sun8.ruf.uni-freiburg.de>
Source record: 198855

Hi,
Is a Medusa T40 a replacement for a Falcon040 ?
The swiss company has advertised her product in the German magazine
ST Computer. Since Simon Gornall asked a time ago for the address:

Medusa Computer System, Postfach 3, CH 8610 Uster
Fax: 01 940 19 49
Tel: 01 940 19 36, 01 940 92 54
Dunno if these numbers work from the UK or the States. You probably
have to dial the the country code before or ask your operator.

Andreas

1380. Re: Spectrum screen grabber

Newsgroup: comp.sys.atari.st
Date: 1993-11-07 01:29:00 UTC
From: evanlang@sdf.lonestar.org
Message-ID: <CG3LGD.8Ap@sdf.lonestar.org>
Source record: 198844

All right folks, this is getting silly. Its almost impossible to do a screen capture of a spectrum picture (almost impossible that is). You see in order to do a screen capture, the computer must know what is on screen, and for a spectrum picture, that is not the case. At best you would get a 16 color picture (because Spectrum is really in ST Low, 16 color mode) that looks like Spectrum 512 when it is doing computation on the picture (the real art program itself). If you've never seen it, its a series of barely distinguishable streaks of color going horizontally across the screen. Only the special CPU intterupts and such that modify the color registers can make sense out of it.

You only other choice is to convert the RAw picture file to some other format. GEMView will do this, and convert to many other formats, with or without displaying the image (to the best of your AES supported hardware, no tricks used, but you can still produce a 256 GIF on a stock ST or other formats, you just view in 16 colors. It supports Falcon and other true-color systems though).

So, screen capture won't do it. COnvert the picture file. If you don't have access to the original picture such as a game using this technique, then you either have to break the hex data out of the game with a programmers tool or you just cry.

PFXPAK is the most reliable program packer I have come across. It is based on LHARC and works under MTOS and Geneva. If you can't find it I can mail it to you.

Cubase never worked under KAOS either. Don't know about unclean
programming, but Cubase provides its own multi-tasking kernel (MROS) which
allows MIDI to carry on while the system is doing other things. TOS never
allowed for this, so Steinberg had to come up with their own solution.

1383. My complements to David T. Jarvis for Soundkey.prg

Newsgroup: comp.sys.atari.st
Date: 1993-11-07 06:56:33 UTC
From: winters@access.digex.net
Message-ID: <2bi671$9j0@access.digex.net>
Source record: 198863

I just downloaded a fun little program to play with, called soundkey.prg. The C source is included - it was out on the archives - I'm sure many of you have seen this. Question - Are there any commercial programs that expand on what this software does? I don't want a midi program, since I play the guitar and just want to fool around with getting sounds out of my ST - maybe eventually I will purchase a synthesizer and all that, but I am kind of nostalgic for seeing what a computer can do in generating it's\ "own" music, just with what comes with the stock machine. (Hey! my friend's $1300 machine would not do this, unless he spent a few hundred dollars - more than I had to spend to get this ATARI ST gear!)
Are there any PD programs that work like soundkey.prg? Are you out there somewhere, David Jarvis? I do have Current Notes ST Library 694D: Quartet Player, but this is not what I have in mind. Thanks for any thoughts you might have on this.... Oh, I have a 1040ST with 1 MB memory and a 20MB hard drive. One last blurb - has anyone hooked their guitar (I got a G&L Broadcaster), whether electric guitar or bass, up to an ST before? I am curious how you might have done that?

1384. Troubles with some new games at atari.archive

Newsgroup: comp.sys.atari.st
Date: 1993-11-07 07:51:16 UTC
From: rdo@kynes.bison.mb.ca
Message-ID: <H.eg.mz4N5suRDjs@kynes.bison.mb.ca>
Source record: 198866
Cross-posted to: comp.sys.atari.st,umich.archives

I downloaded a few of the recent uploads to atari.archive.umich.edu and had
some trouble getting a couple of them to run. I'm running on an 1040 STe,
TOS 1.6, 4meg ram.

In <2bfbdj$ig4@terminator.rs.itd.umich.edu>, Atari Archive Robot writes:
> -rw-r--r-- lenn 296196 Oct 30 23:57 ./Ste/pacman_on_Es.lzh

Great game! Even if you hate Pac Man, download this anyway. Very well done!
One bug: I can't find any way to exit from the game short of powering off the
computer. **Not** very nice.

> -rw-r--r-- lenn 320976 Nov 1 19:10 ./Games/pushover.lzh

Can't get this game to start. When I double-click on it, a song starts playing
on a completely blank screen. And, nothing more happens. I can hit the space
bar at any time and the program quits and returns to the Desktop. For 320k,
you'd think that there is more to this game than that. :-)

> -rw-r--r-- lenn 95104 Nov 1 19:10 ./Games/prens.zip

Don't understand how this game works. I press fire to start the game up. A
grid comes up. My player appears in the top left-hand corner, but is destroyed
in less than 1 second by some sort of force field which also appears in the
top left-hand corner. No matter what I do with the joystick, I always die.

> can't seem to get it to talk to my modem. I have a 1040STf, and a
> smart one 2400 baud modem.

I have a Packard Bell 2400 baud modem and a 520 ST that has been upgraded to 2.5 meg (1.0 TOS) and I cannot get it to work either. The first time I tried, I tried to change the size of the window that I was reading the doc file in and the computer hung. I tried to warmstart, but maxidisk refused to load. I had to turn off my computer (I never turn off my computer; it is was to tedious loading all the stuff I need onto my ramdisk ;-( ) to get my computer back. I was not able to reproduce this error, though.

I installed the thing just the way that was suggested in the readme file, and I set all of the modem settings, etc., but I found that I was unable to dial. I tried everything I could think of. When I switched back to FLASH I discovered that there was all kinds of stuff (some recognizable, some not) in the terminal window, and I could not dial. I had to turn off my modem to get it going again.

My best guess is that it won't run on an ST. I could not find "ST" used anywhere in the file, although it does name the TT, STE, and Falcon.

I am really disappointed, I really liked all of the features.

>the RSC? Or is more required?

You will need CONNECT.ASC, too. This is an ASCii Resource file containing german and english textes. Using an English version, you can detelet the german textx out of it to decrease size by nearly 50%. CoNnect.Hlp is not needed but very helpful. There are other files (CONNECT.NUM) CoNnect will complain if it does not find them, but they are small and don't contribute to size
>And what is PFXPAK? I have looked for this on wuarchive, it doesn't
>seem to be there.

The unregistrated version of CoNnect is not compressable with pfxpak. This is a limitation which is no longer valid in Version 2.50. PFXPAK is no solution yet.

You might be correct, but I did manage to get it to dial and connect once on my Mega2ST (not really sure how). It appears that it processed a "dial" click that I had performed several seconds before (I was in another menu experimenting with settings when it actually dialed). Thus, I conclude that it is either a bug or a configurational (i.e. pilot) error. Some of the features do look neat (I especially like the "one mouse click" switching between the capture buffer and terminal screen, which was one of my favorite features of Flash).

On the other hand, I have not really read the doc file yet, just poked-and-prayed. I intend to rectify this shortly. If someone can get it to work reliably on a plain Jane ST, let us know!

I have packed CoNnect 2.20 with ICE Pack 2.40 and it works fine. I also have
packed all the data files with AFX, although they end up big again every time.

YES,it does.The only thing it doesn't do is re-organise the fat.
So,the 2nd file in the FAT could be the latest on physical disk.
But...no more frag files.
And it's more secure than Diamond Edge (which often crash my ST)

It's a good stuff,keep it.

Well, Storm *does* work on an ST, as I'm using it on the original! (TOS 1.0)

Lessee, where's that file....

this is what my serial setup is in the STORM.INI file:/

```
[Serial Ports]
SerialMask=127
PortMap=6,-1,-1,-1,-1,-1
COM0:=1,0,0,1,2
Port=0
```

This works fine with my 2400 MNP 4 modem (Set to 9600 with RTS/CTS!).
Just change 9600 to 2400, and change flow control to none, and it should
work!

I did have a bit of hassle with the autodialler, but very few programs
autodiallers ever work properly with this thing. (The simpler they are,
the better they work!)

1399. Emulation Questions

Newsgroup: comp.sys.atari.st
Date: 1993-11-07 22:19:27 UTC
From: csullogg@cc4.crl.aecl.ca
Message-ID: <7NOV93.17192748@cc4.crl.aecl.ca>
Source record: 198874

In the very near term I may be forced to abandon my TT in my full time job and get a PC. I can avoid completely giving up the TT by running Spectre (which I own) and by getting a PC harware emulator.

Question 1: Just installed 4 megs of TT RAM in the TT and NeoDesk, Geneva and the standard Atari desktop see all 8megs now in the machine. However, Spectre only sees the ST RAM (even at the Spectre config menu). Anyone know why Spectre cannot see the TT RAM (I've installed TT RAM in several TT's and each one of those could see the TT RAM when running Spectre; what makes my personal TT different?)

Question 2: I could use a minimum 386SX 25MHz harware board for the TT. What are the current options. Will they work with the TTM195 1280x960 mono monitor I have or do they only support VGA?

I have not kept up-to-date on emulation because my TT with GEM software has been a fantastic tool. However, I have to have compatibility with current versions of WordPerfect (intend to run latest versions of Word or WordPerfect) and with MS Project (nothing compatible in the GEM world).

Please, no die-hard Atari enthusiast postings. I want honest PC emulator answeres based on experience, not hype.

Not more concrete info, but I don't think TOS 5.0 has been released. If it were, I probably would have heard about it, since I have access to the developers RT on GEnie. AFAIK, the latest version is still 4.04, since that was on the floopy disk with the "lastest TOS version" when I picked up my developer Falcon from Atari.

How very short the flamer's memories are. _I_ didn't inject the PowerPC into this discussion, somebody else did. I suspect the original offender (?) was talking about the RISC chips in the Jaguar, and the PowerPC chip that will be in new computers.

I _was_ explaining how the Jaguar and PowerPC had little to do with each other; you can't see the content for the flames.

Obviously, a pointless thread. Pity GUS doesn't have a real KILL feature.

I guess you've never tried to attach 3-4 SCSI devices (from different
manufacturers, naturally) to a PC.

[...]

Lucky you. I think the number of days that DOS/Windoze didn't crash for
me is in the single figures. Luckily, I found OS/2...

This'd be a sure way of reducing their stock value; after all, there are
many more people with Atari computers now than there are with Atari game
consoles.

Note that you SHOULD have a palette for monochrome. CrackArt's CA3 format
is brain-dead, because it doesn't. Sure ST-high on an ST is black and
white, but on a TT or falcon, it can be any two colours.

Actually, I use the program "xyz.ttp"; I think Starfall did it (he's on GEnie). It's not bad, but it seems to seriously hog the system at 2400 baud on an ST... its not at all MiNT-aware. It also uses all of your available RAM, so I've got these aliases:

```
alias sz "limit -M 524288 xyz201 -z -u"
alias rz "limit -M 524288 xyz201 -z -r25"
```

Half a meg is serious overkill, especially if you want that RAM for other programs... -r25 (allow 25 errors before aborting) is overkill too; the system at school used to give me an error every 32k, like clockwork.

I hope to dig up some real unix sz/rz sources one of these days (when I'm not busy doing other things), and do a decent MiNT version... Unless some other kind soul does it before then! ;-)

1409. Spectre GCR For Sale (please buy it :-)

Newsgroup: comp.sys.atari.st
Date: 1993-11-08 02:08:15 UTC
From: bmaraldo@watserv1.uwaterloo.ca
Message-ID: <CG5Hxr.EpD@watserv1.uwaterloo.ca>
Source record: 198882

I have been trying to sell my Spectre GCR on the net for sometime now.
Is my $220 price too high? I am speculating that this is the case. So, I will
drop the price...

Spectre GCR v3.0 - includes the original box, hardware, cable, mac roms and
disks and manuals. I will also include a mac boot disk so you can start running
Spectre immediately.

I have been an atari user for 8 years and about 6 months ago I bought a Spectre
GCR. I found myself in 'mac mode' most of the time and finally liquidated my
atari system for a mac system. I am still going to keep my spare 1040 for music
(CLAB Notator - it doesn't seem reasonable to pay and extra $500 just to run
it on the mac - the atari makes a better music computer I think).

Asking $180US plus shipping (around $8).

> Hi, Chris
>
> >MiNT has library support
>
> that's right but Magix includes also a library for programmers

I've never seen a program that requires Magix to run, or even one that advertised that it used Magix features if Magix was loaded.

> a) the system runs quite stable (Magix does so, MiNT doesn't)

MiNT is stable too; otherwise, it wouldn't have been suitable for Atari to use as a kernel for MultiTOS.

> b) you are able to run singletasking programs since you don't want to
> miss your favourite program under the new TOS. You don't want to
> wait until your singletasking program is multitaskable. Maybe your
> favourite program is PD and is not being further developed. So what
> do you do ?

Any program is multitaskable under MiNT. If you're running a GEM program, you can open a TOSWIN window and run any TOS/TTP programs you feel like. No extra programming is required, no waiting is required. Very, very few real programs are incompatible with MiNT (some things built with GFA-BASIC have problems, like the uucico that comes with Hermes).

> c) you are not wasting time. Magix is definitely faster and furthermore
> you don't have to waste time in improving MiNT which is actually not
> your task but the programmer's. You are free to do so but in this case
> your spending time on something which is getting a purpose of itself.
> You want to use your computer to make your life easier - now it's getting
> harder since you are spending time on something what you wouldn't do
> if you hadn't a computer.

Huh? MiNT improves all the time; you don't have to wait for someone to release a new commercial version, send in your upgrade fee, wait for the new version to come, etc.

> Just because everybody is using MiNT you think it would be better to use it ?
> OK in this case I would have to sell my Atari since actually almost every-
> body is using DOS-PCs. But I don't because I love the advantages of my

That's what I absolutely LOVE about this newsgroup. "If you disagree
with me, you might as well buy a PC, 'cause you're an idiot."

> At the moment I have installed 4 OSsytems on my ST. These are Gemini,
> MiNT, Magix& Ease and just Ease. Since I have Magix I have never ever used
> MiNT once again, Gemini once or twice and Magix and Ease all the time.
> It's also a question of testing and experiencing the systems. If you like
> UNIX-shells on a single-user computer stick to MiNT, if you want to work
> seriously with your system, try Magix.

Gemini isn't an OS; Ease probably isn't either (I'm guessing it's
another desktop replacement)...

MiNT can be used as a multi-user system using Stephen Usher's init
package. Suggesting that you can't work seriously on a system with MiNT
installed is just plain stupid; I doubt Magix would let me work on
anything while my UUCP software was running.

(That's not really fair; it's _possible_, and other people do it, but I
can't... Hermes UUCP is probably the only program I use that is
incompatible with MiNT.)

Last time I saw this, PageStream didn't do a very good job. It appeared
to be suffering SEVERELY from round-off errors to the point where you
would have to be very careful about the scale of the original CVG file.

Not to mention that since PageStream doesn't cache anything, using outline
graphics is abysmally slow.

And ANOTHER thing. PageStream has some very small limits on the number of
point, or the area of the pieces in the CVG [not sure which].

I have used it with out changing any modem settings at all on a 2.5 Meg ST with TOS 1.4 and a Supra Fax modem, no problems with the modem at all..

But there is a Problem with VT100 emulation, it drops charaters when scrolling over a menu, but they come back when you scroll the other way...

Flash 1.6 does not do this...

May be you need to send in your ShareWare Fee and get the real support and updates...

Or contact Alan Page on GEnie via Internet...??

I imported circled text into PageStream (the "Outline Art, The Vector
Program for the St" one generates when going thru the tutorial for
Outline Art), and it came in fine. The only problem that arised is
when I starting doing several twists and scews of the object
multiple times. PageStream lost track of the orginal form. However,
if I do not do too much warping of the object within PageStream, it
comes out fine on a PostScript printer.

If Calumus supported PostScript by default and was a little less cryptic,
then there would be no problem.

BTW, is there a program that converts PostScript Type 1 fonts to
Calamus fonts?

1422. Atari "ST" WANTED

Newsgroup: comp.sys.atari.st
Date: 1993-11-08 06:51:02 UTC
From: cornhead@netcom.com
Message-ID: <cornheadCG5v12.IIL@netcom.com>
Source record: 198893
Cross-posted to: comp.sys.atari.st,ba.market.computers,misc.forsale.computers.other,rec.music.makers.marketplace

I bought a weird old direct-to-hard drive digital recording system today.
It requires an "ST" series Atari to operate.

Here's the quote on system requirements:

o An Atari ST series computer with a minimum of 2M of RAM.... Color or
Monochrome monitor and 1 double-sided disk drive.

Later in the manuals, TOS 1.4 or above is recommended.

A little blurb sheet thrown into the box mentions "520 and 1040 STE models and
MEGA STE ..... MEGA 4". I would guess the "520" is a mis-print for "512".
I would assume these machines are compatible if they meet the stipulations
above (have been upgraded). I know a DMA and cartridge port are required.

Hoping to pay between $150 for a complete system (512 based) which meets the
minimum requirement and maybe $300 for, say, a color system with 4 megs
RAM. A small bootable hard drive with system software and the like
might sweeten the deal but I've got a number of drives I can use. I might be
interested in accelerators and math-co hardware to accelerate the mixing
and time-compression operations, but I'm not looking at this machine
as a replacement for my Sun SS2 :)

I actually have 2 of these systems and I hear they can be sync'd via SMPTE
but that each will require a seperate ST :(so I might be interested in a
second machine. As it will be a slave system it will not need a monitor,
in fact if it can auto-boot off one of my hard drives the floppy drive
need not even work. Also I tend to come across monitors for these systems,
and don't mind installing SIMMs or ROMS if sockets are provided.... my point
being if it's cheap enough and can be applied toward my little project
pass it across my bow....

E-mail me if you've got a system or a machine. I'll probably settle on
an offer (or decide to scrap the project) in a week or two.

Thank you!

-cornhead

1423. ORCS - New Version?

Excellent, excellent, exellent! Having downloaded serfx20.prg from wuarchive and run it from my auto folder, I can now run storm!!!

supercalifradgilisticexpialidoshus!!!

However, I have noticed something I don't like, but it is so obvious that I am sure that it is not a bug, but...

When I use my arrow keys to move the curser back along my line of text, the text DISAPPEARS! How annoying!!!

Anyone know how to fix this?

Jeff Healey

FontMonger should do it. It works on MACs and PCs.
But I didn't try it so far.

1426. STORM auto-logon?

Newsgroup: comp.sys.atari.st
Date: 1993-11-08 09:05:26 UTC
From: c-hjr@math.utah.edu
Message-ID: <C-HJR.93Nov8020526@solitude.math.utah.edu>
Source record: 198896

Hello!

I would like help getting an auto-logon file made for the storm program. I loved the .do files that FLASH used - STORMS macros seem so much more difficult. However, as Bill Wickes, one of the creators of the HP48 has said, easy to learn translates to completely useless. I can see already how much better STORMS macros are, but I am not quite sure how to start.

I used to use basic and it should come back pretty quickly. I would just like to see an example of an auto-logon file. The .docs are very large and I have read them the best I could (nodding off tends to occur when reading large doc files). I also used the Find option in storm to search for specifics of making a logon macro, but to no avail. There is a storm.doc and a basic.doc; what I need is a basiclogon.doc.

Thanks!

Jeff Healey

Sequencers are notoriously incompatible. This is due, largely, to the
notoriously bloody useless MIDI handling routines in TOS; everyone ends
up having to rewrite their own MIDI/keyboard interrupt handlers. Some
of the copy protection methods (eg in Notator, I am told) are timing dependent
too, and fail with some system enhancements.

I have the WP 6.0 font pack also, and Speedo hangs whenever any of the
Geometric Slabserif faces (aka Rockwell) are selected, also one of the
Freehand faces hangs. It isn't Works, it is SpeedoGDOS (I wrote a
small program to test it).

>>I have 4M of RAM and have dedicated 100k to each of the SpeedoGDOS
>>caches. I doubled those caches but received the same results.

Don't know about freeware, but if you are prepared to pay, then DA's Vektor
will do this (and much more, of course). Calligrapher also has the ability
to fit text to a circular or Bezier path, but is generally crap (especially
if using PostScript output), and is not supported.

>Magix will be available in the UK very shortly. The current version does
>not work on the Falcon.

Hey, that's really wonderful!

For the first time ATARI did something good: Buying the very good MINT
to give a new and powerful OS to the ATARI community with Pipes, Signals,
loadable file systems...

Then ATARI rewrites the AES gigving it such nice (and for same tasks)
very important features like window gadgets that can be used in the
background, build in PopUp menus, color icons and so on.

And what are the user's doing?

Flame On

Instead of using that powerful OS, they take other OS versions that lack
all the new features of ATARI's official OS!

Why should any programmer use the features, as the public obviously is happy
with the functions from 1985?

And the reason for using the other oS versions?

- It's faster - ok that's true - but is it so important? Isn't MTOS fast enough
on TT/Falcons?. Should ATARI really use an OS for the next years that works
fine on an 260ST instead of one that works good on an TT/Falcon?

- It allows bad programmed programs to work. So instead of changing the
bad programs and using Gem-like programs one changes the OS. Very sensible!

And the consequences are clear: Whatever ATARi implements to MTOS in the
next years: No program will use it as the development in the ATARI

community is stopped by incompatible OS versions like Magix and Geneva.

Would you have used KAOS is it had not been fully TOS compatible?

Shouldn't the few programmers that are left in the ATARI market program
applications instead of different OS versions?

Flame off

>
>Thanx,
>Bernard

A 1040 STf with TOS 1.04? Then I'd say to go for TOS 2.06 definitely, instead of TOS 1.62(if this is available). Keep both your old and new TOS, using a switcher (either hardware or software), to keep maximum compatability with programs old and new. I have TOS 2.06 and 1.06 in my STe, and the new TOS does make life a lot more easier, especially with a hard disk.

About memory, you can either go and have an upgrade soldered in, but then to upgrade further, you haver to get rid of the older one and buy a completely new unit. Your best bet might be to go and buy a kit which allows the STf to take in SIMMS, from where you'll be able to upgrade to 2Mb then add another 2Mb at a later date when you can afford it, if you are not able to go the whole hog now. Also with TOS 2.06, you may be able to upgrade your machine to 12 Mb. The choice is yours.

I can't tell from your address where you are from, but I guess it is North America. From what I have read over the past few months, everyone mentions TOAD as a supplier of ST Stuff. Try them. If you want a list of UK suppliers, then mail me for a list.

I think that the new TOS with switcher would cost around 60 UKpounds (approx US$90) and a SIMM kit without SIMMS would cost about 20 UKPounds (approx US$30). SIMMS are quite expensive at the mo, costing nearly 30 pounds here.

I hope this helps.

So Mag!X sounds to be nicer and faster than MultiTOS. And so does Geneva. But will they still be supported in the future? And will documentation become available, libraries, etc? Please note these are genuine questions, not flames. If a better and/or faster alternative to MultiTOS comes available, I would surely be interested. Nobody objects to using NVDI instead of the original Atari (slow) routines, so why wouldn't one use an alternative to the OS that would be faster and compatible to the official one? But it sounds as if for example Geneva gets its extra speed by not having MiNT installed. Now suppose I like using TeX a lot, I wouldn't benefit from cooperative multitasking a lot, would I?

The proverbial chicken & egg. Why not grab it from a BBS somewhere or order it
from a PD library? It's a very common program and will be available just about
anywhere.

Are there no PCs attached to the Unix server that you could dump the file from?

1445. Need Help with ELFBACK!!

Newsgroup: comp.sys.atari.st
Date: 1993-11-08 14:05:02 UTC
From: andi@gmd.de
Message-ID: <andi.752767502@gmd.de>
Source record: 198809

Hello Atarians,

I installed ELFBACK last weekend on my 520 ST+ (4 MB, TOS 2.06, Overscan). Unfortunately it reported an adress error during compression (according to ANTIBOMB). The error occured sometimes after compressing 1/4 of the data, mostly after half of the data and one time after 3/5.

ELFBACK pops up an alertbox and says that Lharc reported errorcode #1, which is 'Bad Table' according to the documentation. IMHO this doesn't make too much sense here. Right after that ELFBACK asks, if it should write the so far compressed stuff to disk, but when you confirm, it only says: 'File not found'

The first thing, I tried then was rebooting without any accs or autofolder goodies and try again, but without luck. It still didn't work. So I switched to TOS 1.4 and restarted the procedure. Still no success. Then I tried different versions of Lharc (1.13 to 2.30). Bad luck again.

This really is too bad, because ELFBACK seemed to be exactly the backup program I was looking for.

My question is now: does anyone use ELFBACK successfully and can tell me, what I have to do to bring it to life on my ST? Any suggestions are welcome.

Thanx in advance,

Andreas.

Another message from Alan Page about Storm.. from GEnie.

* * * * * * * * * * *

Atari-ST RoundTable
Category 8, Topic 2
Message 86 Mon Nov 08, 1993
A.PAGE3 at 01:46 EST

I am still working on Zmodem. I found a few bugs, and seem to have
introduced some new ones! I am working on one with debug code so I can
print messages to a file. The Storm bugs are pretty much fixed and I hope
to upload a patch tomorrow evening.
5658 bytes is the correct size for SERLFIX.
You can experiment with various Rows= values, but if you specify a value
which will make the terminal window larger than the screen, you may like
the result!
I have tried to put the ability to personalize stuff into Storm. That is
why, outside of the menu bar, I have avoided assigning fixed functions to
keys. e.g. in my sample STORMKEY.INI I show how to set Control-S and
Control-R to do forward/reverse searches. That happens to be how my
Windows programming editor does it. But other people may prefer something
completely different, e.g. control-F.
The various .INI files are very flexible. Using the Basic SET command
will automatically create new sections for you. Many programs have
configuration files that are binary and cannot be messed with.
Once I get the initial bugs out of the way, I am going to go back to the
Basic and start adding more commands. e.g. setting the size and position of
windows from Basic.
Another sample key macro: IF ALERT(1,"[1][Clear Window][Yes|No]") = 1
then menu 1,4
This will pop up an alert, and if you select yes, clears an editor
window.
Note that non-Basic key macros will enter text as if you typed it in at
the keyboard. This works both for the terminal AND editor windows. e.g.
put your name or logo into a function key.
- Alan

Oki Doki, I have for sale again:

3 Matrix COCO Boards (for VME Bus), one Crazy Dot's 32k Board, one SANG Megavision Board, all of them are graphics boards.

I still have one Didot LineArt, Retousche Professional and Sherlook Pro for sale.

Anyone interested just drop me a note :)

No, I am referring to Magic Sac (see below)
>
> Also, I had read that Gemulator emphatically DOES NOT support Dave
> Small's Mac emulators! That was a major gripe in the Gemulator
> article in Current Notes a while back...
>
This is why I want the Magic Sac, apparently Dave Small is being kind of a weinie about the Gemulator. He threatened to sue Darek Mihoka if he provided support for the Spectre cartridge. Personally, I think Dave is making a big mistake, there are a lot of PC users out there who would like to run Mac software. Darek is currently working on his own Mac emulator that will utilize the Gemulator board, but will run from DOS. He should be releasing an Atari 8-bit emulator to be run specifically from DOS also.

BTW, I am still looking of version 3.0 of the Magic Sac software in case anyone wants to give me a copy. This way I'll be able to run some Mac software until the Gemulator Mac is finished.

1451. gulam

Newsgroup: comp.sys.atari.st
Date: 1993-11-08 16:03:08 UTC
From: t150315@lehtori.cc.tut.fi
Message-ID: <2blqjs$3rl@cc.tut.fi>
Source record: 198826

I loaded my Gulam (old unix style shell) from sol.cs.ruu.nl.
Example batch files that came with it doesn't work as they should.

For example:

```
if { -e filename.ext }
this is never true!!!
endif
```

```
set number 2 + 1
sets number to 2
```

```
set number { 2 + 1 }
says: missing }
and sets number to 2
```

Does anybody know where I could get a correctly working copy of
Gulam (you can use all it's features from GFA programs: mv,
'microemacs' etc...) ?

It'll be quite a tight squeeze.

>The .lzh file is 420 megs.

420k. 420 megs would be frightening :-)

>How much of this file is absolutely necessary?
>Is there a smaller part that I could send to my ramdisk so that I can
>try this program out? Is it possible to have my floppy and my ramdisk
>share the effort?

I believe all the files in conn220i.lzh (zip) are necessary. In the earlier release, conn210i.lzh (zip), some of the files could be skipped (mainly the ones in the subdirectories for the most part).

Assuming it's set up for English, then you could probably skip the CONNGER.HLP and CONNGER.RSC files (the german resource and help files) - this might free up enough space to put an *archived* copy on the floppy. You then could make a ramdisk of around 600k (just a guess) and uncompress the archive to the floppy, and work from there.

Another possibility would be to uncompress the main program, CONNECT.PRG, and then use one of the "executable file packers" (like Pack-ICE) which will cut down on the disk space taken up.

Personally, I'd get a bigger floppy (not just for Connect, but everything else as well). Considering high-density mechanisms are only like $50, you could probably pick up a double-density mechanism for less than that (I don't think it would require too much to swap the mechanisms, except for the different shape of the front panel (a particular pain with the internal floppy)). I mention getting the mechanism and doing the swap primarily because it might be cheaper than getting an external DD/DS, but it is trickier to do...

Hope this helps...

^^^^^^^ Man! that's one big archive :)
I think you mean 420K.

> Is there a smaller part that I could send to my ramdisk so that I can
> try this program out? Is it possible to have my floppy and my ramdisk
> share the effort?

Actually I don't know why you can't run the whole thing from a RAM disk.
You would have to copy the entire disk to RAM, butyou would have to use
more than one floppy. The .LZH standard should be the same for PC and
ST, so you could un-archive it on a borrowed PC.

BTW, e-mail me if you still have problems, I'm at SLC also.

1463. text utility program wanted!

Newsgroup: comp.sys.atari.st
Date: 1993-11-08 19:44:03 UTC
From: hallvart@ifi.uio.no
Message-ID: <2bm7i3$hlf@holmenkollen.ifi.uio.no>
Source record: 198831

I'm in search of an ACCessory that will allow me to access foreign characters and symbols that my keyboard doesn't have, without having to redefine the keyboard layout each time.

Let me explain; I have a database where I store addresses and names etc. Some of the names/addresses
have accented or foreign characters. The ST has these in it's ASCII character set, but my keyboard
layout hasn't been assigned to access ALL characters. I know I can get to some of them by pressing
CTRL or ALT combinations, but that might call a function in the program, so I can't use that.

It would be nice to have an ACCessory where I could get an ACII table and use my mouse pointer to
get those special characters that my keyboard doesn't have.
Is there such a program available (preferrably in the Public Domain)?

1466. Trackball (Alfa Data TKB-MT-AC)

Newsgroup: comp.sys.atari.st
Date: 1993-11-08 19:56:58 UTC
From: aeg03@rrz.uni-koeln.de
Message-ID: <2bm8aaINN16ve@rs1.rrz.Uni-Koeln.DE>
Source record: 198834
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi folks,

I recently bought a trackball made by Alfa Data, the type name is TKB-MT-AT. Unfortunately, it turns out that the ball itself as well as the axles for the x- and y-direction have smooth, hard surfaces, and they tend to slip past each other. This makes precise control of the mouse pointer quite difficult. Especially moving the mouse in a direction that has a small angle with respect to one of the axes is next to impossible.

I have tried coating the axles with pieces of rubber tube of various kinds, without any satisfactory result. Does any of you know a trick how to fix this problem? Does any of you have experiences with this type of trackball, or another one?

Greetinx & thanx in advance, Jan

1469. ST wordprocessors *summary*

Newsgroup: comp.sys.atari.st
Date: 1993-11-08 21:10:36 UTC
From: jackson@phobos.sscl.uwo.ca
Message-ID: <JACKSON.93Nov8161036@phobos.sscl.uwo.ca>
Source record: 198835

A couple of weeks ago, I (jackson@phobos.sscl.uwo.ca) wrote:

>I would like to find a word processor (pd, shareware, or
>reasonably priced commercial), for others in my family to use. The
>wordprocessor should:
>
>- be robust
>- support multiple font sizes and types
>- be easy / intuitive to use
>- support epson 9 pin printer with good nlq as well as postscript file
>output
>- have a spell checker built in
>- preferably wysiwyg
>- be reasonably quick at scrolling, etc.
>- inclusion of graphics (.pi*, .img, .eps, etc.) would be a plus

I have received several replies, which I promised to summarize. It
sounds like Atari Works, That's Write, Write On, Script, Papyrus,
Tempus, Signum, Calligrapher, and Word-Up will do what I want. Does
anyone have any supplementary comments?

Here are some of the replies I recieved: (Thanks to all those who
wrote!)

==========

From: Lexicor@world.std.com

Script 3.0 and Papyrus are definately the best I think for what you are looking
but Atari Works does also what you want..but it's SLOW!!! and the graphics
are not shown, but can be placed on the page...

==========

From: Derek Fountain <FOUNTAD@VAX.SOUTHBANK-UNIVERSITY.AC.UK>

I've been considering the same problem (right down to machine spec) for the
last few months. In short, you're asking too much. There are very few PD/SW
programs available with a spelling checker - the only one I know of is
dbWriter. This looks good and has plenty of features - including mailmerge,
database, etc. Unfortunately, in my experience, it is not at all robust. It
forgets parts of your files and crashes quite a bit.
There are a few about which do some of the things you want, but I've found none
that do them all - or even enough to justify using. I gave up and brought a
copy of LeRedactuer.
Sorry to be negative - good luck with your search!

==========
From: jkreth@lonestar.utsa.edu (Jeffrey A. Kreth)

Most people probably agree that Calligrapher and Atari Works are the only
worthwhile ST wordprocessors that perform to the specifcations you mentioned.

==========
From: moacs11!walra@relay.NL.net (Waldi Ravens)

Calligrapher Pro, That's Write 3, Signum 3. They all meet your demands,
but all 3 are commercial packets. The postscript versions are still rather
expensive. Calligrapher Pro is by all means the best, but also very, very
expensive! That's Write is easy to use, actively supported, and reasonably
priced (the normal version that is, postscript costs $$$).

==========
From: aspect@cats.ucsc.edu

One word: AtariWorks. Great Word Processor, Spreadsheet & simple Database.
I don't know the proce, but see if there is a version that comes with the new
SpeedoGdos. I think it's about $120 for the pair. If you haven't heard about
it, Speedo is the new standard for outline fonts on the ST, allowing unlimited
point sizes and no Screen font vs Printer font confusion. There are more
powerful Word Processors, but Works is easy to use, completely standard as
far as the interface is concerned, and _WILL_ be supported. It is written
by Atari themselves and comes with every Falcon030 purchased, so there are
quite a few copies out there.

==========
From: error@stack.urc.tue.nl (Erlend Nagel)

you
will need Signum or something that uses signum fonts, like Script or
Papyrus. Signum printing is *SLOW* by the way. The only wordprocessor I
know for the atari that supports postscript printing is That's write in
its special postscript version.

==========
From: =?iso-8859-1?Q?Hallvard_Tanger=E5s?= <hallvart@ifi.uio.no>

"Write on", "That's Write" and "Tempus" are a few good WP packages I can come to think of.
There are probably others too.

You can write to Compo Software and ask about "That's Write", "Write On" etc.

Compo Software Ltd.,
7 Vinegar Hill,
Alconbury Weston,
Huntingdon,
Cambridgeshire,
PE7 5JA,
England

Write also to the ST club and ask for their free catalog! They have some really
good and cheap commercial software packages i.e. "Tempus" for wordprocessing etc.

they also sell PD software, and their catalog is really informative.

The ST Club,
2 Broadway,
Nottingham,
NG1 1PS,
England

Kinda strange your use of the anonymous service when you're looking to
purchase something. Makes it difficult to reply directly via e-mail.

1474. 1040ST motherboard wanted

Newsgroup: comp.sys.atari.st
Date: 1993-11-09 00:03:45 UTC
From: braner@newton.emba.uvm.edu
Message-ID: <1993Nov9.000345.5054@emba.uvm.edu>
Source record: 198843

If anybody's got a 1040ST they'd like to get rid of,
please tell me. I only need the motherboard, so if you
have one with a blown power supply or disk drive, or
with a broken case or keyboard, that's fine. I'll buy
a whole CPU unit, though, as long as it's cheap. Thanks!

1479. spinning platters and other such nonsense part II

Newsgroup: comp.sys.atari.st
Date: 1993-11-09 02:12:19 UTC
From: msteve@magnus.acs.ohio-state.edu
Message-ID: <2bmua3$iqr@charm.magnus.acs.ohio-state.edu>
Source record: 198848

Well, the last time I came to this group with a question it was about a single-sided drive which wouldn't stop spinning. I got great information...

Ironically, I have the exact opposite problem. I was gifted with a harddrive which won't spin when turned on. I was told that once I started spinning the drive, the mechanism would kick in, and keep the platter spinning, until the power turns off. The drive will work, but needs to be jump-started manually.

The drive is in a SH204 case and the drive is a Seagate ST-138N .

Question 1:
How would I go about manually spinning the drive?

Question 2:
How practical would it be to fix this problem. Since the drive motor can't start the drive, could the motor be replaced? I know that I will eventually replace the drive, but until then, is it feasable to temporarily fix it?

Hear ye, ye prrr--oo-gramming ty-ypes!

Ze French, with zeir magnifique archiver, ST Zip v. 2.30, are currently leading ze archiving world, n'est pas? Le interface, le compression--tres bon! But, we hear zat les Allegmaignes are still working on zeir trusty LHA software! Bon chance, Allegmaignes! BUT, ye overseas persons...I have ze one question:

(Stops insulting the continent of Europe)

Does anybody have an archiver that will turn an entire directory (say, a folder within a folder) into separate archives of the separate files as a single operation? I used to put dozens of files into single huge archives, and then one went bad and I lost the works. All a program would have to do is to strip the extenders from each filename (possibly with a query if there's a conflict) and present me with the finished archives at the end of the dull, repetitive work.

A note of explanation--quite literally hundreds of Atari Deluxe Paint block and art files, classified and divided into folders. I'd like to archive the lot of them, but must it be one-at-a-time, or all into a single big archive?? Well, French? Well, Germans? Anybody else brilliant out there?

Thank you!

: I'm in search of an ACCessory that will allow me to access foreign characters and symbols
: that my keyboard doesn't have, without having to redefine the keyboard layout each time.

I have come across (and overcome) exactly this problem. There are, I
believe three possible solutions:-

1) If you only place the occasional extended character, the accessory
called EXTAKEY.ACC will do exactly the job you are looking for. I ftp'd
the latest version of this only a few days ago (probably from ftp.uni-kl.de).

2) Define a data file for DC-FKEYS which defines F1-F5 as \ accented
characters, Shift F1-F5 as / accented characters, CTRL F1-F5 as " umlaut
characters, etc etc. You can of course tailor this to your exact needs.
This is the method I currently use.

3) JAMES.ACC has this built in as one of its many useful features. It
allows you to get eg. / accented e by typing:
'e' followed by CTRL-/. This is the same with , ~ " \ / etc.
Reading the DOC gives good examples.

If you (anyone) wants, I will send them a UUE'd copy of my DCFKEYS.DAT
file with most foreign characters covered.

>1400 UKPounds...

Bad typo there :) it's 149 UK Pounds I would assume :), 1400 is a little
much is it not? *grin*

It really depends on your result and what you want to do, you can do REAL
3D Text and Morphing and Cycles, transformation, bnend and skew etc. also
with Chronos.....now are you looking for a pseudo 3D? or real 3D?

From: bourlon@gla.ecoledoc.ibp.fr
Message-ID: <2bnkdl$3f5@vishnu.jussieu.fr>
Source record: 198660

The game works fine, and is very good. BUT, you may have problems while trying to launch it : M.GRIFF - the author - forgot to get enough memory for the screen (xbios((int) 5, (long) 0, (long) 0, (int) 3, (int) 0x23) is MUCH better than xbios(88,0x23) without malloc & setscreen first !!!!). So, to play with this game, you must first choose a resolution which need at least 64 Kb of memory (320x200x256,640x200,16,320x200xTC,640x200xTC,etc...)

Have fun !

1488. Hi-speed JPEG viewer for the Falcon

Newsgroup: comp.sys.atari.st
Date: 1993-11-09 08:58:36 UTC
From: oldcornd@cs.man.ac.uk
Message-ID: <1993Nov9.085836@cs.man.ac.uk>
Source record: 198661

I'd like to announce the availability of JPEGV, the Volume 11 Software Development JPEG viewer. This comes in two forms, 030 and DSP versions. Both are written to take full advantage of the Falcon's video hardware. The 030 version is entirely public domain, and can be copied without restriction. The DSP version is NOT, and can be obtained for five pounds from the address given in the program.

A speed comparison: on a colour JPEG about 640x320-ish:
030 version: 13.2 seconds
Another available DSP viewer: 10.3 seconds
V11 DSP version: 5.04 seconds

On large files the DSP version is relatively slightly faster because of the 1s overhead on startup - for a 1700x1700 colour picture:
030 version: 3 minutes
Another DSP viewer: wouldn't load (too big)
V11 DSP version: 50 seconds

It can (theoretically... I've never actually seen one this size) handle pics up to about 2000x2000 - it can perform a supersampled zoom on very big pictures to allow them to fit in even a 4 Meg Falcon.

It's VGA capabilities are limited by the 320-wide restriction.

It should be available froms atari.archive.umich.edu and its mirrors. Please grab a copy, and copy it around as much as possible

Believe me it's impressive.

Dave Oldcorn (V11 software).

1489. Atari 520ST aquired, need information.

Newsgroup: comp.sys.atari.st

From: falcor@netcom.com
Message-ID: <falcorCG7x0n.B91@netcom.com>
Source record: 198673

I just purchased and atari 520ST for real CHEAP.
Now, this has a few problems.
1. The mouse cable is broken. I can prolly put a new connector on it,
but, are new mice available anywhere?
2. The disk drive is broken. It's a MASTER drive clone of some sort.
Can I just put my IBM's 1.44meg floppy in there to test things?
Also, I don't expect HD support... all the software I have is on SS
disks.
3. Anyone want to make me an offer for the 520ST, 2 trays of blank disks,
(well, maybe not so blank...), and a SC1224 monitor?

Also, if and when I get this working, what is it good for other than
collecting dust?

I just uploaded a new version of my game traps to atari.archive.umich.edu.
It should show upo in a few days in to file traps12.zoo in the games dir.
For those who cannot wait, it is now in New :-) and it is already on
ftp.uni-muenster.de in the right place.

Have fun,
Ulrich

>objects to using NVDI instead of the original Atari (slow) routines,
Well obviously because NVDI does not force the programmer to change his techniques. NVDI 2.5 for instance does provide some new features such as offscreen bitmaps. Now tell me how many hands you need to count the applications that take advantage of this feature.
Leaving out some minor changes the programmer can do absolutely the same under plain Atari VDI and for instance NVDI.
Concernung Multitasking AES this strategy won't fit.

Well it looks like ST FORMAT is giving us almost everything you or
anyone else will need (except for postscript). Wordflair on the
coverdisk, and with a cheap offer to upgrade to Wordflair II with Speedo
(which is the combination I use, and I am very happy with it).

SUmmary of Wordlflair functions.
GDOS support (Speedo/FSM in Wordflair II)
SUpport of both GEM vector graphics and IMG bitmap graphics
SPellchecker and good thesaurus
Extensive mailmerge facilities
Calculating in documents

SOrry for the commercial flavor of the post, but I thought that this
opportunity was too good for anyone to be missed.

Erlend, happy Wordflair user.

>Is there such a program available (preferrably in the Public Domain)?

I use a program that does something like this all the time, but easier.
It only gives the foreign language characters, not the entire ascii
table. The name of the program is accnt206.lzh (I think it is on
ftp.cs.ruu.nl , at least I sent it there (to Ate)).
It comes with a handy cpx so it does not take an accessory slot. It is
extremely reliable. I have yet to find a program that does not work with
this installed. And should you encounter such a program, via the control
panel you can easily disable the program.
This is the way it works. YOu type the alt key and some other key, like
alt ^ and then the character you want the circumflex above. Or type
alt , and then the c to get a c cedille. Or alt ' and an e to get an e
with the forward pointing accent. Alt ! and alt ? will give the upside
down exclamation mark and question mark from SPanish.
You can also use the CPX to switch on another feature which is built-in
in TOS 2.06 but not present on earlier versions. With my TOS 1.4 I can
still have this feature. With this function you can type *ANY* character
using the alt key and the number keys on the numeric keypad. E.g. if you
hold alt down and type 65 on the numeric keypad you get an a (did I get
the ASCII code right?). For this last trick you need either a good
memory or you take the Atari manual and look up the numbers of the
character codes. But probably you will mostly only use the alt ' and alt
` etc. codes.

If you cannot find the program give me a hint and I'll send it. It is a
must have for every Atari User.

Erlend.

I just wondered if anyone else had had/overcome the following problem, which occurs on most packers (Sentry,Ice,Jam,Atomik etc.) and also MegaDepack, when you try to save the packed/unpacked file back to its original filename automatically. It happens even more when you use a wildcard (? or *) in the selection line.

The problem is that the program saves the packed file back onto the disk, but then packs it again and again and again, because it still matches the given mask. This usually results in a number of files of the same name appearing in the directory, which can fortunately be deleted.

: conflict) and present me with the finished archives at the end
: of the dull, repetitive work.

It sounds to me like what you actually need is a packer, rather than an archiver. There are dozens of these around, doing much the same job. I actually use Sentry Packer, having found it the most compatible of all those I have tried, but I know many other users who are using all the other packers quite happily. Some of the other ones are:-

Jampacker, Pack Ice, Atomik Packer, Automation Packer, PFXPAK, Pompey Packer, etc. (I must have forgotten loads)

> fine on an 260ST instead of one that works good on an TT/Falcon?

I don't like this particular kind of reasoning. System software should
always be ultra-fast, regardless of the machine type. I really like
what MiNT/MTOS offer me, and I use MTOS even on my 8 MHz Mega, but
I'd really like to see a 2- to 3-fold speed increase even on my TT.

> - It allows bad programmed programs to work. So instead of changing the
> bad programs and using Gem-like programs one changes the OS. Very sensible!

MiNT also is full of hacks that allow old-style or bad-mannered programs
to work. I wouldn't count this as a specific con regarding MagiX!.

> And the consequences are clear: Whatever ATARi implements to MTOS in the
> next years: No program will use it as the development in the ATARI
> community is stopped by incompatible OS versions like Magix and Geneva.

I think the whole problem will settle down once it is clear whether
Atari will be successful with the Jaguar project or not. If they are,
they will be able to hire new people for systems programming
and free Eric of his Jaguar support tasks. Then we will probably
see major steps in the TOS development, and MagiX! won't be able
to follow. (Well, maybe the Behne/Kromke team *can* follow - fine
with me!)

Personally, I'd like to see a merger between MTOS and MagiX! -
MTOS with the speed of MagiX would make a killer OS!

From: falcor@netcom.com
Message-ID: <falcorCG89Jv.56G@netcom.com>
Source record: 198678

I posted earlier about my 520ST not having a working floppy.
I don't have much experience with the ST series, so I don't know whether
the system accesses the disk drive or not when the system powers up.
I have tested the circuit board and drive cable that I have, and they check
out. Does the floppy drive in an external enclosure need to be set to any
particular drive number? The 1.44meg I was using to test was set to drive 1.
Also, the Chinon stock disk drive from the MASTER enclosure doesn't light up
either with the system powered up. So, do I have a blown floppy controller?
If so, does anyone know where I can get the chip cheap?
I realize when I replace it, I should socket it. =)

>Thus far I've managed to find only two: Mountain QWK and Captain's
>QWK. I've heard rumours about one called "Maximiser" or somesuch, but
>are there others out there? He's not terribly concerned whether these

Well, I've tried every one I could get my hands on, and most of them
couldn't handle the QWK packets from IBM systems. MMST, Maximiser and
Mountain QWK either couldn't load them or bombed. I found that v.2.2
of Captain's QWK _will_ work, but woe betide you if you want to delete
or edit a reply once it's been saved. I watched in horror as the BBS
informed me it was tossing 9 replies when I had deleted 4 of them.
Sleazy (and doubly embarrassing since I moderate that particular echo).

I now use SLMR or OLX while running PC Ditto (slow but reliable). Wish
I knew of other options.

I keep hearing numbers around 15,000 which isn't very much but better than nothing! FWIW, Hisoft, in a magazine article recently said something to the effect that they know exactly how many Falcons have been sold and they are happy to support it based on those figures. They certainly have a lot out/on the way at the moment.

Aha.. well that's why I'm posting it for a friend. No, actually he does not
have Usenet access.

I am presently using WordPerfect, WordFlair and LDW Power as
my document processing tools, what does AtariWorks have to
offer me that these packages can not? Is Speedo GDOS better
than FSM GDOS?

AW> As the title sais, is it possible to get more tham 960 cps on a
AW> 'stock' ST under mint? If so, HOW?

Try FSER096 (Auto folder program with it's own serial routines) and CoNnect
2.20 (also shareware). My CPS rates are only a few digits lower than under
normal TOS. (using a TT, reaching 2230CPS at 19k2).

I've heard about a picture called JAGUAR.GIF showing the Atari Jaguar.
I kindly ask anybody possessing the picture to e-mail it to me. My e-mail
address is : szoli@tomx.elte.hu .

Thanks in advance
Zoltan Sebestyen

I wrote a note to Alan and he said
that ALL systems regardless of what type of modem must use a flow control
patcher or else it doesn't work.

NOTE::::::It won't work with 1.2 and HSMODEM1, works great with serfix2.0
though..
/s

1520. Re: Atari Works, SpeedoGDOS, and Word Perfect 6.0 fonts

I originally posted this query. I have since resolved the problem. Since my Mega STE doesn't have an AJAX (but it does have a HD drive), I decided it was safest to transfer the files to DD disks via my PC. This seems to be the source of my problem. I decided to let my WD1772-02 heat up a little by copying the HD disks. Several font files on disk #2 wouldn't copy (disk error reported). All fonts that did copy worked. I am going to call Bitstream to see about getting a replacement disk.

Interestingly, the fonts mentioned are the very ones I was having trouble with earlier.

Does anybody know the exact location of this printer driver.
Archie is one of the many things I'm not allowed to do here.

1522. Looking for educational software at FTP sites

Newsgroup: comp.sys.atari.st
Date: 1993-11-09 18:16:13 UTC
From: foreilly@ccvax.ucd.ie
Message-ID: <1993Nov9.181613.52580@ccvax.ucd.ie>
Source record: 198757

Hi ST-ers,

I need to know if there's any educational software out there on FTP
sites for the 3 to 6 year old bracket. You know, reading, mathematics,
that sort of stuff.
I'm looking specifically for software that runs on 520st or 1040st.

If there's enough replies, I'll post the list.
Oh, and please reply to my e-mail address rather than posting.

Thanks in advance,

Fran O'Reilly
University College Dublin
Ireland

They sell Atari stuff now? Man, I'd heard about the corporate shakeup
at Apple, but I had no idea things were _that_ bad... ;)
